Clearing among London bankers [is] a method adopted by them for exchanging the drafts of each other's houses, and settling the difference. Thus, at half-past three, a clerk from each banker attends the clearing-house, where he brings all the drafts on the other bankers which have been paid into his house during that day. . . . Balances are then struck.—*Wharton, Law Lexicon.*

(For example see extract under Cleavage.)

Cleavage. s. (used also adjectivally in the extract.) In *Mineralogy*. See Lamination.

Again, in the tessular system, the cleavage may be parallel to the surface of the cube, which is thus readily separable into other cubes, as in Galena; or the cleavage may be such as to cut off the solid angle of the cube, and since there are eight of these, such cleavage gives us an octahedron, which, however, may be reduced to a tetrahedron, by rejecting all parallel faces, as being mere repetitions of the same cleavage; this is the case with Fluor Spar; or the cube of the tessular system may be cleavable in planes which truncate all the edges of the cube; and as these are twelve, we thus obtain the dodecahedron with rhombic faces: this occurs in Zinc Blende. And thus we see the origin of Häuy's various primitive forms, the tetrahedron, octahedron, and rhombic dodecahedron, all belonging to the tessular system:—they are, in fact, different cleavage forms of that system.—*Whewell, History of Scientific Ideas*, ii. 79.

Preceded by plane.

Take a case. When I say, —All crystals have planes of cleavage; this is a crystal; therefore, this has a plane of cleavage; and when it is asserted that this describes the mental process by which I reached the conclusion; there arises the very obvious question—What induced me to think of 'All crystals?' Did the concept 'All crystals,' come into my mind by a happy accident, the moment before I was about to draw an inference respecting a particular crystal?—*Herbert Spencer, Principles of Psychology*, § 38.

—*Numbers*, xvi. 31.

It cleaves with a glossy polite substance, not plane, but with some little unevenness.—*Sir I. Newton, Opticks*.

[*Cleave*.—This word is used in two opposite senses, viz. 1, to adhere or cling to, and 2, to separate into parts. In the former sense we have German *kleben*, Dutch *kleeven*, *klijven*, to stick to, to fasten; Provincial English *clibby*, Dutch *kleevig*, *kleverig*, sticky. From *clob*, a lump, a mass. . . . The double signification of the word seems to arise from the two opposite ways in which we may conceive a cluster to be composed, either by the coherence of a number of separate objects, or by the division of a single lump or block into a number of separate parts. Thus from German *kleben*, a mass, lump, or bundle (*ein kleben* *Nachs*, a bunch of flax), *klöben*, *klieben*, to cleave. When an object is simply cleft, the two parts of it cleave together. Dutch *kloue*, a cleft, *klouen*, chaps in the skin, *klouen*, *klieuen*, to chink, cleave, split. (Kilian.) The Danish uses *klæbe* in the sense of adhering, *kløve* in that of splitting. The Danish *kløve*, a tongue, bears nearly the same relation to both senses. Swedish *kläffa*, German *klöben*, a vice, a billet of wood cleft at one end. The designation may either be derived from the instrument being used in pinching, holding together, or from being divided into two parts. Scotch *claff*, a fissure, the fork of the body, or of a tree. The same opposition of meanings is found in other cases, as the Dutch *klincke*, a cleft or fissure, and Danish *klinke*, to rivet or fasten together the parts of a cracked dish; Dutch *klinken*, to fasten together; English, *clench*. Compare also French *river*, to fasten, to clench. English *rivet* and *rive*, to tear or cleave asunder, *rift*, a cleft. — *Wedgwood, Dictionary of English Etymology*.]

And cleave a giant at a random blow.

off it shall go now. And who cares? If I can't a

kill him dead, I'll get rid of him by bits. There's

one eye out already, and now I've a mind for his

tail. Corporal, lend me the cleaver.'—*Marryat,*

Snarleygove, vol. iii. ch. i.

Cleavers. s. Name given to the Galium Aparine, from its sticking or cleaving to everything which touches it, a property due to the numerous small hooks which beset its stems, leaves, and fruit; goosegrass. Clematis. s. [Gr. *κλήματις* = vine-prop, trellis: the second syllable short.] Generic name for a large group of climbing ranunculaceous plants, several of which are cultivated in England, and one of which, the Clematis Vitalba, is native. As all the so-called English names for this last are evidently misapplied, it would be well to recognize Clematis as a popular as well as a scientific name. *Agnus castus*, *chaste-tree* (an approximate translation), and *Virgin's bower* may possibly be as appropriate as any such names can be, though they have but little to recommend them. Meanwhile, *climber* and *clamberer* are too general; whilst the next, *traveller's joy*, seems to have originated in a blunder. So far from the plant being a comfort to the traveller, it is, like its congeners, an acrid poison, and, when applied externally, a caustic. Being used by the beggars to make artificial sores, it has in different countries been named accordingly: in German, *bettlerskraut*; in French, *herbe au gueux*, *viorne*, *viorne des pauvres*, and finally *la consolation des voyageurs*, on the strength of the connection between a poor man's plant and a wanderer's friend. This suggests another name, *the wayfaring tree*.

CLEM

Here, however, the confusion is complex; inasmuch as the Wayfaring Tree is the *Viburnum Lantana*; *viorne* being the French form of *viburnum*; and this we have already seen applied to the Clematis.

Virgin's bower is believed to have been taken from a picture representing the Virgin Mary with the flower of some creeper above her. For further remarks on the many names of this plant, and the confusion in their application, see *Eglantine* and *Woodbine*.

Upright Clambers, or Virgin's bower, is also a kind of *Clematis*.—*Gerarde, Herball*, p. 888: ed. 1633.

Geyer says that the root of a species of *clematis* is used by the North American Indians as a stimulant to the horses which drop down during their races.—*Lindley, Vegetable Kingdom, Ranunculaceae*.

Clémency. *s.* [Fr. *clémence*; Lat. *clementia*.]

Mercy, remission of severity, willingness to spare, tenderness in punishing; mildness, softness.

For us, and for our tragedy,
Here stooping to your clemency,
We beg the hearing patiently.

Shakespeare, Hamlet, iii. 2, prologue.
Be careful for the country, and our nation which is pressed on every side, according to the clemency that thou readily shewest unto all.—2 *Maccabees*, xiv. 9.

I pray thee that thou wouldst hear us, of thy clemency, a few words.—*Acts*, xxiv. 4.

Then in the clemency of upward air,
We'll scour our spots, and the dire thunder scar.

Dryden.
I have stated the true notion of clemency, mercy, compassion, good-nature, humanity, or whatever else it may be called, so far as is consistent with wisdom.—*Addison, Freeholder*.

Clément. *adj.* Mild, gentle, merciful; kind, tender, compassionate.

The sweet, the clement, mediatorial hour.

Clémently. *adv.* In a mild or merciful manner.

O Mary Magdalen, hear our prayers, which are full of praises, and most clemently reconcile this company unto Christ!—*Jeremy Taylor, Dissuasive from Popery*, ii. 9.

Clinch. *v. a.* [as to form, in the same relation to *cling* as *wrench* is to *wring*, *drench* to *drink*; hence, originally, in sense, 'make, or cause, to cling'; see, however, *Clinch*, *Cling*, and *Clumsy*.] Fasten, as with a rivet; draw tight; grasp firmly.

He recalls a thousand times the scene, the moment, in which but a few hours past he dared to tell her that he loved; he recalls a thousand times the still small voice that murmured her agitated felicity; more than a thousand times, for his heart clenched the idea as a diver grasps a gem.—*Disraeli the younger, Coningsby*, b. vii. ch. vii.

As applied to reasoning in such expressions as 'he clenched,' meaning 'placed in a firm and unassailable condition,' it is possible that, over and above the metaphor from the rivet, there is the similarity in sound or form with the technical term *clenchus* = proof. See *Elench*; also *Clinch*.

Cléncher. *s.* That which clenches: (used of an argument: see *Clench*).

Clénching. *part. adj.* Convulsively grasping.

Their gasping throats with clénching hands he holds.

Hail, thou Goddess fair and free,
In heaven yclep'd Euphrosyne.
(Milton, L'Allegro.)

The *y-*, here, represents the *ge-*, the general prefix to A.S. participles: *clypian* = call, *clypianne* = to call, *ge-clyped* = called.] Call; name. *Obsolete*.

They clepe us drunkards. *Shakespeare, Hamlet*, i. 4.

CLER

Clepe. *v. n.* Call. *Rare*.

For true record of this my faithful speech.

This is what the poor call shoplifting, the rich and learned *cleptomania*.—*Douglas Jerrold, St. James and St. Giles*.

Clerestórial. *adj.* Appertaining to a Clere-story.

Clerestory. *s.* [This word, which occurs neither in the previous editions nor in Webster, is entered according to the usual spelling; but without an accent. This is because its derivation is doubtful, whilst its length depends on its derivation. It is often, perhaps generally, sounded as a quadrisyllable; whereas, if it be simply the combination *clear + story*, it is a trisyllable. This latter derivation rests on the text of the chief modern works on architecture, checked by references to individual authorities whom it would be ostentatious to quote by name. Still there are doubts; doubts which fall under two heads. Those that belong to the first may be dealt with at once. The extracts show that the meaning of the first element is equivocal. *Clear* may mean *light*, or it may mean *free*. The etymological evidence is in favour of the former. Though the word has two meanings in English, *clair* in French and *chiaro* in Italian mean, either always or generally, *light*; and its French and Italian equivalents are *clair étage* and *chiaro piano*.

In respect to the word being, in the first instance at least, *clear story*, the case is different. Such an origin, to an etymologist, seems little better than the connection between *sparrowgrass* and *asparagus*. The class of words in which a strange term misunderstood is assimilated to some familiar one, of which either the form or import, or both, admit of the confusion, is so large, and the exceptions to its catachrestic character so few, that such an etymology as *clear-story* is an extreme improbability. Nevertheless, whoever objects to it must give full value to the opinion of those who look at the thing rather than the word.

In favour of the current view are—

1. The fact of the French having *clair étage* (= clear stage), the Italian *chiaro piano* (= clear plane), as its equivalents; provided that these are old terms, and not the invention of modern writers on architecture.

2. That of *clear story* appearing in a document so early as the Will of Henry VI.

3. That of *sti. v* in its ordinary sense of the *story of a building* being, at least, more characteristic of English architecture than of that of any other country.

4. The agreement between the name, so derived, and the meaning.

5. The fact that Ducange gives no such word as *clerestorium*, the one which, at the first view, suggests itself as an origin.

6. The existence of the compounds *blind-story* and *over-story*, the former applied to the triforium as opposed to the *clear story*, and the latter denoting the *clear story* itself.

Against it are—

1. The fact of *story* being a word which, even now, is slow to enter into a true com-

pound. When we talk of a *first* or *second story*, the words are generally, perhaps always, separate, i.e. *first stóry*, not *first-story*: and, even here, *floor* is the commoner element, as *ground-floor*, *first-floor*.

2. Secondly (and here the editor must premise that he takes his data solely from the current works on architecture, especially the Glossary of Architecture, referring to them, whether for or against his criticism, without either special knowledge of the subject or investigation of ultimate authorities), the extracts that favour the received derivation are all subsequent to A.D. 1400, or the time when the Norman French ceased to be commonly spoken in England. Yet *cléristère* is given as the French for *clear-story*. Assuming, as in the previous case, that this is an old word rather than a modern coinage, we find in it a serious objection. However important the English school of church architecture may have been, or however great may have been the influence of certain guilds in the diffusion of architectural terms, a French word like *cléristère* derived from an English *clear + story* is an improbability.

In respect to its sound, we may presume that the tradition of its pronunciation as a part of the spoken language has been broken, it being possible that the word was never used, except on the strength of its appearance in books, between the time of Inigo Jones and the present. Hence, the word may be treated as a *revived* one. If so, its sound may be determined by a body of architectural authorities; or, at least, the spelling may be fixed and the pronunciation allowed to take its course; the theoretical propriety of the orthography, as tested by the derivation, being left as uncertain or insoluble. In this case, however, the fact of the word, whatever it may be, having derivatives must be borne in mind; so that those who are satisfied with *clear-story* must consider whether such a word as *clear-storial* would be equally tolerable; or, if not, whether *clerestorial* must be avoided; or, when used, be looked upon as a derivative of *clear-story* which is not to be spelt etymologically. In fact, it is the word *clerestorial* that supplies us with the best evidence in favour of the original word having been quadrisyllable, and it is the same word which justifies the spelling of the present entry. Whatever else *clerestory* may be, in lexicography, it is the base of *clerestorial*.

The existence of *clear-story* as a combination of two words (or even as a true compound) with a definite architectural import is by no means impugned by these remarks; indeed it may be found with a meaning little different from that of *lantern* or *skylight*. Nor is there any reason why even a true *clerestory* may not, also, be called a *clear-story*. The question before us is that of the derivation of the name of a certain portion of an ecclesiastical edifice, combined with that of its spelling, the result being that *clear-story*, to the exclusion of *clerestory*, is condemned.]

For definition of the word as commonly used see first extract.

Clear story or *clere story* [is] the upper vertical divisions of the nave, choir, and transepts of a church. It is *clear* above the roof of the aisles, whence it may have taken its name, but some have derived the name from the *clair* or light admitted through its tier of windows. Nearly all the cathedrals and large churches have *clear stories*, or tiers of arcades, and also of windows over the aisles and triforia. There

is no triforium in the priory church of Bath, but a series of large and lofty windows constitute the *clear story*. The choir at Bristol cathedral has neither triforium nor *clear story*.—*Gault, Encyclopædia of Architecture*, Glossary.

Above these arches, and on the same face, . . . is a triforium, or gallery passing round the whole circumference and adorned by a series of interlaced arches, while in the *clear story* above occurs, over each archway, a semicircular-headed window.—*Godwin, Churches of London, Temple Church*.

The tower is divided into three stories. . . The *clear story*, forming the belfry, presents on each face a dial and a large pointed window in three divisions.—*Ibid.*, *St. Dunstan's in the West*.

Clerical. adj. Relating to the clergy. *Rare*. Constantine might have done more justly to have punished those *clerical* faults which he could not conceal, than to leave them unpunished that they might remain concealed.—*Milton, Animadversions on a Defence of the Humble Remonstrance*.

Clergify. v. a. Convert into a clergyman: (in the following extract it means 'bring over to your clerical principles'). *Rare*.

And how our leisure fitteth love,
And let it fit (quoth she)
To such as lust for love; sir Clarke,
You *clergify* not me. *Warner, Albion's England*,
b. vi. ch. xxxi. (Rich.)

Clergy. s. [N.Fr. *clergé*.]

1. Body of men set apart by ordination for the service of the Church.

We hold that God's *clergy* are a state which hath been, and will be as long as there is a church upon earth, necessary, by the plain word of God himself; a state whereunto the rest of God's people must be subject, as touching things that appertain to their soul's health.—*Hooker, Ecclesiastical Polity*, b. iii.

The convocation give a greater sum,
Than ever, at one time, the *clergy* yet
Did to his predecessors. *Shakespeare, Henry V.* i. 1.

The church is also sometimes used to denote the *clergy*, as distinguished from the laity; as, when we speak of any one's being educated for the church, meaning, for the ministry. Some would perhaps add, that it is in this sense we speak of the endowments of the church; since the immediate emolument of these is received by clergymen. But if it be considered that they receive it in the capacity of public instructors and spiritual pastors, these endowments may fairly be regarded as belonging, in a certain sense, to the whole body, for whose benefit they are, in this way, calculated; in the same manner as we consider, e.g. the endowment of a professorship in a university, as a benefaction, not to the professors alone, but to the university at large.—*Whately, Logic, Ambiguous Terms*, app. i.

Used adjectivally.

Laud's offence was having aimed at changing the national form of our church into the Roman form. Before he was caught out he had almost succeeded in making a *clergy-church*. . . They had not then fully arrived at the days of dogma and opinion. It was still a political question, namely, an issue between the national form and the Roman form, or *clergy-church*.—*Lord & Montague, The Four Experiments in Church and State*, p. 68.

2. Benefit, or privilege, of clergy: (a privilege, now abolished, by means of which clergymen, and in course of time all who could read, were in certain cases exempted from criminal process before the secular judges).

Clergy may be demanded after judgement given against a person; . . . even under the gallows if there be a proper judge there who has power to allow it.—*Tomlins, Law Dictionary*.

[*Clerk*.—*Clerical*.—*Clergy*. Latin, *clerus*, the clergy; *clericus*, Spanish *clerigo*, one of the clergy; a clerk; *clerecia*, the clergy, which in Middle Latin would have been *clericia*, whence French *clergé*, as from *clerico*, one admitted to the tonsure, French *clérigon*, *clérigon*. (Ducange.) The origin is the Greek *κληρικός*, a lot, from the way in which Matthias was elected by lot to the apostleship. In 1 Peter v. 3, the elders are exhorted to feed the flock of God, 'not as being lords over God's heritage,' *οὐδ' ὡς κατακυριεύοντες τῶν κληρῶν*, 'neither as having lordship in the clergy.'—(Wielit in Richardson.)—*Wedgwood, Dictionary of English Etymology*.]

Clergyable. adj. See extract.

All the statutes for excluding clergy are in fact nothing else but the restoring of the law to the same rigour of capital punishment in the first offence that was exercised before the Privilegium Clericale was at all indulged, and so tender is the law of inflicting capital punishment in the first instance for any inferior felony, that notwithstanding by the marine law . . . benefit of clergy is not allowed in any case whatever; yet when offences are committed within the admiralty jurisdiction, which would be *clergyable* if committed by the land, the constant course is to acquit and discharge the prisoner.—*Jacob, Law Dictionary, Benefit of Clergy*.

Clergyman. s. Man in holy orders; man set apart for ministration in holy things; not a layman.

How I have sped among the *clergymen*,
The sums I have collected shall express.

What means the profession furnishes, the *cleric* who is the most intent upon its proper duties, the most addicted to a life of study and devotion, is the least qualified to improve.—*Bishop Horsey, Sermon for Sons of the Clergy*: 1786.

Clerical. adj. Relating to the clergy: (as, 'a clerical man' = a man in orders).

I cannot subscribe to the counsel of Leonardus Lessius, that it were meet for clerical and religious persons rather to suffer death than to kill a murderer; since no reason can be shewed, why their life should not be as dear to them as others.—*Bishop Hall, Cases of Conscience*, ii. 1.

Sir P. P. having observed many to look with an evil eye on the clerical revenue, his lordship sent him in a letter the following paper.—*Bishop Barlow, Remains*, p. 271.

Clerisy. s. Body of clerks or clergy: (in the extract applied to men of learning and thought in general).

The *clerisy* of a nation, that is, its learned men, whether poets, or philosophers, or scholars, are these points of relative rest. There could be no order, no harmony of the whole, without them.—*Coleridge, Table Talk*, p. 41.

Clerk. s. [Lat. *clericus*; A.S. *cleric*.]

4. One who reads the responses to the congregation in the church, and performs other parochial duties connected with the church; parish clerk.

By the *clerks* in the rubric of the Common-Prayer-Book, (which was first inserted in the second book of K. Edw. VI.) I suppose were meant such persons as were appointed, at the beginning of the Reformation, to attend the incumbent in his performance of the offices; and such are still in some cathedral and collegiate churches, which have *lay-clerks* to look out the lessons, name the anthem, set the psalms, and the like; of which sort I take our parish-clerks to be, though we have now seldom more than one to a church.—*Wheatley, Rational Illustration of the Book of Common Prayer*.

Clerk-ale. s. Feast for the benefit of the parish clerk. See Ale.

Clerk-ale occurs in Aubrey's manuscript History of Wiltshire. 'In the Easter holidays was the *clerk-ale* for his private benefit and the solace of the neighbourhood.'—*T. Warton, History of English Poetry*, iii. 129.

tection that their forces could afford, or their weapons procure; and yet did every one of them, both in action and word, *clerk-like* dissemble their several imaginations, whereunto their minds were as prone and ready, as their hearts were cunning closely to conclude them.—*Knolles*, 923 E. (Ord MS.).

Mirror for Magistrates, p. 431.

He knew well how necessary, in the game of politics, it is to appear no less a man of the world than of books; and though he was not averse to display his *clerkship* and scholastic information, yet he endeavoured to make them seem rather valuable for their weight, than curious for their fashion.—*Sir E. L. Bulwer, Pelham*, ch. lxvii.

To me and to my heirs for ever.

Pope.

3. Well-shaped; neat.

She called him gundy guts, and he called her lousy Peg, though the girl was a tight *clever* wench as any was.—*Arbuthnot*.

[*Clever*.—The word is probably derived from the notion of seizing, as Latin *rapidus* from *rapio*; Scotch *glep*, quick of perception, *clever*, quick in motion, expeditious, from Gaelic *glac*, to seize, to catch. The Scotch has also *cleik*, *cleik*, *cleuch*, *cluke*, *cluck* (identical with English *clutch*), a hook, a hold, claw or talon; to *cleik* or *cleik*, to catch, snatch, and hence *cleik*, *cleuch*, lively, agile, *clever*, dextrous, light-fingered. One is said to be *clever* of his fingers who lifts a thing so *cleverly* that bystanders do not observe it. (Jamieson.) Now the Old English had a form *cliver*, a claw or clutch, exactly corresponding to the Scotch *cleik*, *cluck*.

Hence the Old English to *clever*, Dutch *klaveren*, *klavern*, to claw oneself up, climb, scramble; and hence also I believe is formed the adjective *clever* in the sense of snatching, catching, in the same way as the Scotch *cleik*, *cleuch*, above mentioned.

'The bissart (buzzard) bissy but rebuik
Scho was so *cleverus* of her cluik,
His legs he might not longer bruik,
Scho held them at ane hint.'

(Dugbar in Jamieson.)

Dutch, *kleverig*, sticky; Platt Deutsch, *klevisk*, *klefsk*; *klefske finger*, thievish fingers, to which everything sticks.—*Wedgwood, Dictionary of English Etymology*.]

The white owl in the belfry sits.

Click. *s.* Catch for retaining the bolt in a lock; holder into which the latch drops when the gate is shut; slight sharp sound such as is made by the dropping of a latch or the cocking of a pistol.

Clicket. *s.* [N.Fr. *cliquet*.] Ring, knocker, or hammer of a door; key. *Obsolete.*

This freshe May of which I spake of yore,
In warm wax hath enprinted the clicket
That January bare of the smal wicket.

Chaucer, Merchant's Tale.

Clicking. *verbal abs.* Act of that which clicks.

A dull rotation, never at a stay,
Yesterday's face twin image of to-day;

Grows drowsy as the clicking of a clock.

My mother is something better, though, at her advanced age, every day is a climacteric.—*Pope.*

It had been a task worthy of the moral philosophers to have considered with equal care the climactericks of the mind; to have pointed out the time at which every passion begins and ceases to predominate, and noted the regular variations of desire, and the succession of one appetite to another.—*Johnson, Rambler, no. 151.*

The rider seemed to have passed the great climacteric, but looked hale and vigorous.—*Sir E. L. Bulwer, Eugene Aram, b. ii. ch. v.*

Climato. *s.* [Fr. *climat*.] In the geographical sense, a zone measured on the earth's surface, of which there are 24 between the equator and the polar circle, called half-hour climates, in the course of each of which the longest day becomes half an hour longer, and 6 between the polar circle and the pole, called month climates, in the course of each of which the longest day becomes a month longer; in the common and popular sense, a region, or tract of land, differing from another by the temperature of the air.

Considering the regular form of this word it is a scarce one. It is given, however, in the American dictionaries, and in Hilpert's German Dictionary translated *klimatisch*. In many places where it might be expected it is either expressed by a circumlocution, by *climatal*, or by some such word as *meteorological*, *atmospheric*, *geographical*, or *telluric*, generally preceding influences. The doubt as to the accent may have something to do with this; though *climatic* is the true pronunciation.

The want of a ready-made term like Physics, or Physic, probably lies in the fact of the word having taken its secondary and geographical sense during the Alexandrine, rather than the Athenian, stage of the Greek language, after the time when scientific treatises were written with titles derived from the adjective in *-κλος*. See Chromatics.

The objections to *climatal* lie chiefly in the accent; the *a* in the last syllable of *climâte* being long, whereas the accent of ordinary trisyllables in *-al* is on the first.

success; but greatly circumscribed in their walks
by *climbers* of a most luxuriant growth, which were
so interwoven together as to fill up the space be-
tween the trees about which they grew, and render
the woods altogether impassable.—*Cook, Voyages*,
vol. i. b. ii. ch. vi. (Rich.)

3. In Ornithology. Translation of the Latin
Scansores, a term applied to birds like the
parrots and woodpeckers. See *Scanso-
rial*.

sors, or Perching Birds, are the *Scansores*, or *climbers*,
a division which, as its name implies, includes
all those birds remarkable for their power of *climb-
ing*, to accomplish which most of them have their
toes arranged in pairs, or two opposed to two, but
with some modification. In our British birds, eight
genera . . . belong to the *Scansores* . . . commencing
with the family of the woodpeckers.—*Yarrell, Brit-
ish Birds, Great Black Woodpecker*.

around her, sharp memory, and the dull routine of
an unimpassioned life, all combined to wear out a
constitution originally frail, and since shattered by
many sorrows.—*Disraeli the younger, Coningsby*,
b. i. ch. ii.

Chapman, Translation of the Odyssey, b. x.

Cling. *v. a.* Dry up; consume; waste. *Rare*.

A virtue rare,
That makes wealth slave to need,
And gold become his thrall;
Clings not his guts with niggish fare,
To keep his chest withall.

If thou speak'st false,
Upon the next tree shalt thou hang alive,
'Till famine *cling* thee. *Shakespeare, Macbeth*, v. 5

Cling. *s.* Embrace. *Rare*.

Clinging. *verbal abs.* Act or position of
one who clings.

Clinic. *s.* [Gr. *κλινη* = bed.] One on his
deathbed. *Rare*.

a baptism in reserve, a wash for all our sins, when
we cannot possibly commit them any more.—*Arch-
bishop Sancaft, Sermons*, p. 100.

Bring to us a *clinick*, or a lunatick, or a demoni-
ack, and we will instantly restore him sound, and in
health, without any other conjuration and charm
than that of his powerful name.—*Killingbeck, Ser-
mons*, p. 131.

Clinical. *adj.* Relating to the bedside: (ap-
plied, in *Medicine*, to instruction founded
upon cases under observation).

I have always thought that hospitals are not con-
verted to half the good they are calculated to serve
as schools of medicine. . . . I have always thought,
that in our schools every mode of lecturing has been
exalted above *clinical* lecturing; and every place
where knowledge is to be had, or supposed to be
had, has been unduly preferred to the bedside. . . .
With respect to *clinical* lecturing itself, custom has
robbed it of its peculiar character, and withal of
half its advantages and half its popularity. It has
been separated too much from the wards and the
bedside, and has deviated into discussion of abstract
pathology and therapeutics.—*P. M. Latham, Lec-
tures on Subjects connected with Clinical Medicine*,
lect. ii.

Clink. *v. a.* Strike so as to make a slight
sharp noise.

I shall *clinken* you so mery a bell,
That I shall waken all this compaignie.
Chaucer, Shipman's Tale, Prologue.

And let me the canakin *clink*.
Shakespeare, Othello, ii. 3. song.

To this word references have been made
under both *Clang* and *Clank*. This is be-
cause a definition in the ordinary sense of
the term was impossible. The meaning of
all the three words is best illustrated by
comparison; the question being one of the
three different, though allied, sounds.

They are varieties of the same sound,
and that a *metallic* one. No one applies
any of the three words to that emitted by
the collision of two pieces of wood; nor yet
to that of a piece of wood against a piece
of metal; except perhaps in a few excep-
tional cases connected with *clang*, such as
we have when a resonant piece of metal,
like a bell, is struck by a tongue of wood
or leather; in which case the sound still
preserves its metallic character from the
bell. In other words, it is a bell; and (as
such) metallic, but modified; in some cases
muffled. *Clanks* and *clinks* almost always
imply metal on both sides. If otherwise,
something is either made to act as a metal,
or its influence is overridden by a metallic
element.

With these preliminaries we may make
the difference clear by comparisons. All
suggest the notion of sound, and all of
sound with repetition; either real repeti-
tion of the sound, or repetition simulated
by prolonged vibrations.

Clang reminds us most of a bell; *clank*,

of a chain (heavy rather than light); *clink*, of the collision of, comparatively, thin and small metallic plates. In respect to the adjectives applied to them thus much may be said, viz. that though *clanks*, as intermediate sounds, may be either acute or bass according to their approach to the corresponding extreme, no one ever talks of a sharp *clang* or a deep *clink*.

It may not be unnecessary to remark that in these words we must guard against the notion that in the combinations *-ng* and *-nk* we are dealing with the ordinary sound of *n*, as in *chin*. Neither are we dealing with the sound of *n + g*. The real sound is (approximately) that of *ng*, treated as a single sound, in *clung*; and that of *ngh* in *clank* and *clink*.

The absence, too, of any combinations of *cl-* and *-ng* with the vowels *e*, *o*, and *u*, as the representatives of metallic sounds, must be noticed. *Clenk*, *clonk*, and *clunk*, as words of the same general import with *clang*, *clank*, and *clink*, have no existence in the current English. Nor is their non-existence accidental.

For the complement to these remarks see *Crush*, in which the onomatopoeic import of the combination *cl-* is further noticed.

Clink. *v. n.* Utter a slight, sharp, interrupted noise.

The sever'd bars,
Submissive *clink* against your brazen portals. *Prior*.

Clink. *s.*

1. Sharp successive noise; knocking.

I heard the *clink* and fall of swords.
Shakespeare, Othello, ii. 3.

2. ? Keyhole; ? chink. (In the following extract, it seems to be substituted merely for the sake of the rhyme.)

Tho' creeping close, behind the wicket's *clink*,
Privily he peeped out through a chink.
Spenser, Shepherd's Calendar.

Clinker. *s.* [*Dutch, klinkard*.—observe the change from a foreign to a native form in the two extracts from *Evelyn*; also, the fact of *klinkard* being a Dutch substantive, not an English participle.] Kind of brick. See extracts from *Gwilt*.

That goodly aqueduct so curiously wharfed with
klinkard brick, which likewise paves the streets.—
Evelyn, Journal, i. 24. (original MS. at Wotton).

violently burnt, or masses of several bricks run to-
gether in the clamp or kiln.—*Gwilt, Encyclopedia*
of Architecture, § 1824.

Dutch *clinkers* and Flemish bricks vary little in
quality; they are exceedingly hard, and are used for
the paving of stables, yards, &c., though they are by
some objected to, as being too hot for the horses'
feet.—*Ibid.* § 1830.

Clinkers [are] bricks impregnated with nitre, and
more thoroughly burnt by being placed nearer the
fire in the kiln.—*Ibid.* Glossary.

Applied *metaphorically*, its exact import
being uncertain.

It serves for sceptic and free thinker:
It serves for stubble, hay, and wood,
For everything but what it should.

Off went his silken robe, and in he leapt,
Whom the kind waves so licorously cleapt,
Thickening for haste, one in another, so,
To kiss his skin, that he might almost go
To Hero's tower, had that kind minute lasted.

Much higher than fruition is.

But Love had *clipp'd* his wings, and cut him short,
Confin'd within the purlieus of his court.
Dryden, Fables.

Clip the king's English. The term *king's English* in this phrase suggests something more than the simple *clip* of the extract under 2, the notion of debasement like that of the coin of the realm being superadded.

Mrs. Mayoress *clipped* the king's English.—*Addison, Spectator*.

Clip. *v. n.* [see remarks.]

Some falcon stoops at what her eye design'd,
And with her eagerness the quarry miss'd,
Straight flies at check, and *clips* it down the wind.
Dryden.

The verb here, notwithstanding its being followed by *it*, is neuter, the construction being that of 'Goes it.' See *Go*.

[The origin of the term *Clip* requires some notice. This is the last of three different entries, in each of which the verb in question is treated as a distinct word, because it is thought better to err on the side of separation, than on that of confusion.]

It is by no means certain that the ideas of *clasp*ing and *cut*ting are disconnected. With shears and scissors, there is something on each side of the object upon which they close; and in this respect their mode of cutting differs from that of an ordinary knife, and approaches a clasp. With a curved forceps, or with the jaws of a stag-beetle, there is, superadded to the cutting, an actual, or approximate compass, encasement, or embrace. Nevertheless, the words are separated; though only provisionally.

If the third *Clip* is to be connected with the other two, it must be with the second rather than the first. The connection between *swiftness* and *cut*ting is illustrated by such expressions as 'Cut along, Cut away,' and others of colloquial, rather than classical, character. See *Cut* and *Eclipse*.

With the German *klepper*, however, the connection is undoubted; *klepper* being explained in *Adelung* as a horse trained for swiftness, racehorse. It is with this sense, and probably with its other colloquial senses suggestive of superiority, that *clipper* = fastsailing ship, is connected.]

Clip. *s.* Embrace. *Rare*.

Finding these northern climes do coldly him embrace,
Not us'd to frozen *clips*, he strave to find some part,
Where with most ease and warmth he might employ his art.
Sir P. Sidney, Astrophel and Stella.

Clipped. *part. adj.* Cut, in its general and special senses.

But in man's dwellings he became a thing
Restless and worn, and stern and wearisome,
Droop'd as a wild-born falcon with *clipt* wing,
To whom the boundless air alone were home.
Byron, Child Harold's Pilgrimage, iii. 15.

Credit had never been so solid. All over the kingdom the shopkeepers and the farmers, the artisans and the ploughmen, relieved beyond all hope, from the daily and hourly misery of the *clipped* silver, were blessing the broad faces of the new shillings and halfcrowns.—*Macaulay, History of England*, ch. xxiv.

[French, *cloche*, German, *glocke*, Dutch *klocke*, a bell. Before the use of *clocks* it was the custom to make known the hour by striking on a bell, whence the hour of the day was designated as three, four of the bell, as we now say three or four o'clock. It is probable then that *clocks* were introduced into England from the Low Countries, where this species of mechanism seems to have inherited the name of the bell which previously performed the same office. Swedish, *klocka*, a bell, a clock. The word *clock* is a variation of *clack*, being derived from a representation of the sound made by a blow, at first probably on a wooden board, which is still used for the purpose of calling to service in the Greek church. Servian, *klepalo*, the board used for the foregoing purpose in the Servian churches, German, *brett-glocke*, from *klepati*, to clap or clack, to beat on the board. Estonian, *kolkma* (with transposition of the vowel, related to *clack*, as German *kolbe* to English *club*), to strike, to beat, *kolkima*, to make a loud noise, *kolki-laud*, a board on which one beats for the purpose of calling the family to meals.—*Wedgwood, Dictionary of English Etymology*.]

Clock. s. [?] Flowers or work about the ankle of a stocking.

His stockings with silver *clocks* were ravished from him.—*Swift*.

Clock. s. Provincial name of the common dungbeetle; extended to other beetles, and, in some cases, to the cockchafer.

[In Jamieson the entry is *clock-bee*, suggesting its application to some hymenopterous or dipterous insect resembling a bee. Hence it is probably the same word as cleg, and, if so, it has a fair claim to be treated as a true Norse name; *klæg* = Lat. *tabanus* being a Norwegian term, and, as far as a negative assertion may be ventured, one not easily found out of Norway. According to the editor's personal experience, the parts of England (and these are Lincoln and the more Danish parts of the island) where *clock* more especially stands for beetle, are the parts where *cleg* = gadfly is the rarest.

Though a Keltic origin (*goluch*, a word not found in the ordinary dictionaries) has been claimed for *clock*, and though the connection between the sound of a beetle's wings and a bell's (see *Clock*) tongue has been suggested, the identity, word for word, of *clock* and *cleg* is held to give a preferable derivation; though the connection between certain beetles and death-watches, and watches and clocks may have helped the confusion.]

venture to name, from the subjects it chose, and the

part. *clausus* = shut.—Common in com-
position, as the second element in a word.

In respect to form, the participle of the
compounds is *clusus*: in respect to mean-
ing, the change varies with the combina-
tion. For the word before us, however,
that which most requires notice is the one
with *con* (*cum*). *Concludo*, whence *con-
clude*, means 'end or finish'; and that
through an association of ideas which is
illustrated by the phrase 'shut up' = finish
in our own language. Hence we get
two classes of meanings for the word
before us. 1. Those connected directly
with the simple verb, and the primary
sense of *shut*. 2. Those connected with
the compound *concludo*, and the secondary
sense of *finish*. Those connected with
includo are less important. That this dis-
tinction is clear or equivocal according to
the character of the instances is to be seen
under Closing.]

Webster, Duchess of Malfy.

Closer. *s.* (*s* sounded as *z*.) That which
closes: (for its technical sense in *Architec-
ture*, see extract).

Closer [is] the last stone in the horizontal length
of a wall which is of less dimensions than the rest
to close the row. Closer in brickwork, are pieces
of bricks (or bats), less or greater than half a brick,
that are used to close in the end of a course of brick-
work. In English as well as Flemish bond, the
length of a brick being but nine inches and its
width four inches and a half, in order that the ver-
tical joints may be broken at the end of the first
stretcher, a quarter brick (or bat) must be inter-
posed to preserve the continuity of the bond: this
is called a *queen-closer*. A similar preservation of
the bond may be obtained by preserving a three-
quarter bat at the angle in the stretching course;
this is called a *king-closer*.—*Gwill, Encyclopedia of*
Architecture, Glossary.

Closeset. *adj.* (second *s* sounded.) Set
closely together.

In most Pterodactyles the teeth are of one kind,
few and far apart, with long, slender, compressed,
slightly recurved, pointed crowns; but some, from
the more ancient secondary deposits, show, behind
a few teeth of the above prehensile character, a close-
set row of small lancet-shaped teeth: such modifi-
cation characterises the genus *Dimorphodon*.—
Owen, Anatomy of Vertebrates.

Closetool. *s.* (second *s* sounded.) Cham-
ber utensil so called; nightstool.

He himself (the doctor), when he happened to be
low-spirited, or fatigued with business, found im-
mediate relief and uncommon satisfaction from
hanging over the stale contents of a close-stool,
while his servant stirred it about under his nose:
nor was this effect to be wondered at, when we con-
sider that this substance abounds with the self-same
volatile salts that are so greedily smelled to by the
most delicate invalids, after they have been ex-
tracted and sublimed by the chemists.—*Smollett*,
Expedition of Humphry Clinker.

Used adjectively.

A pestle for his truncheon, led the van;
And his high helmet was a close-stool pan. *Garth*.

The crowded shelves with rarities of shells.

and the children there while Sir Pitt was closeted
with Rebecca, on his way to the house, or on his re-
turn from it.—*Thackeray, Vanity Fair*, ch. xiv.

it is allowed and called bowles or skittles.—*Jacob*,
Law Lexicon.

Closhcoyles. *s.* Same as Closh.

Closhpin, or Clashpin. *s.* See Coiting.

Closing. *verbal abs.* Act by which anything
is closed: (the word having the sense of
either *concluding* or *approaching*; thus the
'early-closing movement' is the movement
in favour of *shutting up* at an early hour;
Closing, in wrestling, means coming in *con-
tact*: in each of which instances, as in all
similar ones, Closing may be treated as an
equivalent to Close sounded *cloze*, or vice
versâ. Between Closing and Close sounded
cloze = field, there is no such correspond-
ence).

In plants you may try the force of imagination

2. Dull, heavy man.

To abuse clots and clowns with.

B. Jonson, Magnetick Lady.

Clot, as in **Clot-(bur)**, *s.* [the latter two words rather than a compound; and, indeed, of doubtful character as a combination.] Clot-bur occurs in Botany as the English name of either the ordinary Bur (*Arctium Lappa*), or certain plants of a burlike character. How far it is a really vernacular name is doubtful.

There is no need of making Clot part of a compound. In A.S. it was simply *cláte*; the *á* being, probably, sounded as the *o* in stone. It was certainly applied to the ordinary Bur; and probably to other plants having involucre furnished with small hooks. It suits the Geum urbanum; for it evidently meant something that caught.

Here, however, it chiefly commands notice as a word suggesting an explanation of one of the meanings delivered by the combination *cl-t*. The word Cleats in Shipbuilding (see Young's Nautical Dictionary), which denotes 'pieces of wood with notches for setting shores against, . . . also for belaying ropes to, and other purposes,' agrees with the name of the plant both in form and import.

The connection with the Clot of the preceding entries is less direct; and, for this reason, the words are separated.

Clot. v. a. Form into clots or clods; hang together; concrete; coagulate; gather into concretions.

Here mangled limbs, here brains and gore,
Lie clotted.

J. Philips.

Clot. s. (with the *o* short, and with the *th* pronounced as in *thin*, not as in *thine*.)

[Clot, at present, seems to mean something *woven* rather than something *worn*. It arose, however, out of the notion of a garment rather than out of that of a tissue.

Its plural is *cloths*, as in 'two different cloths,' meaning two different kinds of *cloth*. Meanwhile, *clothes* is not its plural; though the true singular of Clothes is rarer than the true plural of Cloth. See Cloth.

Neither does Clóth stand in the same relation to Clóthe the verb, as Use, the substantive, sounded *uce*, does to Use the verb, sounded *uze*; though the change of the final consonant is of the same kind. In Cloth, however, the vowel is shortened, while in Use it remains unchanged.

Though apparently the simplest of its family, it is not only a derived word, but a comparatively new derivation. It means something which clothes; yet it is so restricted to *woven* articles, that, taken by itself, it looks as if its primary meaning were connected with weaving. Moreover, its commonest application is to woollen articles. Though we may talk of cotton cloth and linen cloth (not, however, of silken), we generally mean, when we use the word alone, woollen. No one says that a hat or a shoe is cloth to the head or the foot; though many may say that it is *clothing*. In short, the word has a special, which has grown out of a general, sense; and that, at a comparatively late date. In respect to its immediate origin, the remarks

CLOT

hitherto made, notwithstanding the strictures which accompany them, have pointed towards the verb as its base, giving, as they do, the analogies of Use = *uce*, and Use = *uce*, to which we may add Grease, and a few other words. But these words are of Latin or French origin, whereas Cloth is German; besides which, their final consonant is not *th* but *s*. The word with which it coincides most closely is Bath, a word which comports itself to *bathe*, both verb and substantive, as Cloth does to *clothe*. We *clothe* (*clóthe*) ourselves in *cloths*, just as we *bathe* (*bádhe*) in *báths*; and that without stretching the common practice of our language. But we may also take (in a river) a *báthe* every morning, or two *báthes* (bathings) a day. The form, then, in the long vowel, with the sound of the *th* in *thine* (*dh*), is the original one, and, this being determined, the evidence that the older meaning was connected with *clothes* as garments, rather than with *cloth* as a tissue, is satisfactory. The German and Scandinavian for Cloth are *tuch* and *duk*; words which have nothing to do with the root Cloth, but which are still to be found in English in such combinations as *Russian duck*, which, when white trousers were worn, was a common one.]

Woven material, generally of wool, and for wearing apparel; but also of linen and cotton, and applied to purposes other than those of clothing, such as table-covers and canvass for painting.

I answer you right painted cloth, from whence you have studied your questions.—*Shakespeare, As you like it*, iii. 2.

Nor let, like Nævius, every error pass,
The musty wine, foul cloth, or greasy glass.

Often used as the second element in a compound, as tablecloth. When fine metal wire enters largely into the tissue, we may have cloth of gold, &c.

a great part of the country was irrecoverably lost,
and many of the poor distressed people, being bereft
of their habitation, came into England, where the
king, in compassion of their condition, and also con-
sidering that they might be beneficial to his subjects
by instructing them in the art of *cloathing*, first
placed them about Carlisle in the north, and after re-

1. Visible collection of vapours in the air.

Now are the clouds that lower'd upon our house,
In the deep bosom of the ocean buried.

Shakespeare, Richard III. i. 1.
As a mist is a multitude of small but solid globules, which therefore descend; so a vapour, and therefore a watry cloud, is nothing else but a congeries of very small and concave globules, which therefore ascend, to that height in which they are of equal weight with the air, where they remain suspended, 'till, by some motion in the air, being broken, they descend in solid drops; either small, as in a mist, or bigger, when many of them run together, as in rain.—*Grew, Cosmologia Sacra.*

Clouds are the greatest and most considerable of all the meteors, as furnishing water and plenty to the earth. Cloudy. adj.

1. Covered with clouds; obscured with clouds; consisting of clouds.

As Moses entered into the tabernacle, the cloudy pillar descended, and stood at the door.—*Exodus, xxxiii. 9.*

At last his sail-broad vans
He spreads for flight, and in the surging smoke
Uplifted spurns the ground; thence many a league,
As in a cloudy chair, ascending rides.

2. Dark; obscure; not intelligible.

—*Watts, Improvement of the Mind.*

With that sun-shine, when cloudy looks are clear'd.

Witness my son, now in the shade of death,
Whose bright outshining beams thy cloudy wrath
Hath in eternal darkness folded up.

Before the wine grows cloudy, shake the hogs-
head, and carry a glass of it to your master.—*Swift*,
Advice to Servants Direction to the Butler.

Clough. s. [?] Cleft of a hill; cliff.

A clough, or clough, is a kind of breach or valley
down a slope from the side of a hill.—*Versteegan*,
Restitution of decayed Intelligence, ch. ix.

Clough. s. [?] See extract.

Clough . . . among merchants is an allowance for
the turn of the scale, on buying goods wholesale
by weight.—*Tomline, Law Dictionary*.

Clout. s. [A.S. *clut.*]

1. Cloth for any mean use.

His garment, nought but many ragged clouts,
With thorns together pinn'd, and patched was.

Spenser, *Faerie Queen*.

A clout upon that head

Where late the diadem stood.

Shakespeare, *Hamlet*, ii. 2.

2. Patch on a shoe or coat.

No man putteth a clout of boistrous cloth into an
olde clothing, for it doth away the fulness of the
cloth, and a worse brekyng is made.—*Wycliffe, St.*
Matthew, ix. 16.

3. ? Mark of white cloth at which archers
shot.

He drew a good bow: he shot a fine shoot: he
would have clapt i' the clout at twelve score.—
Shakespeare, Henry IV. Part II. iii. 2.

4. Buffet. *Colloquial*.

[*Clout.*—Anglo-Saxon, *clut*, a patch. The primary sense
is a blow, as when we speak of a clout on the head.
Dutch, *klotsen*, to strike. Then applied to a lump
of material clapped on or hastily applied to mend a
breach. In the same way English *botch*, to mend
clumsily, from Dutch *botsen*, to strike; English,
cobble, in the same sense, from Welsh *cobio*, Eng-
lish *cob*, to strike.—*Wedgwood, Dictionary of Eng-
lish Etymology*.]

Clout. v. a.

1. Patch; mend coarsely; join awkwardly
or coarsely together.

Can you clout me a payre of botes?
I wolde have them well underlayed, and easily,
For I use alwaye to goe on the one side.

Hycke Scornor.

puteth, how he clouteth the old broken holes with
patches of papistry.—*Bale, Yet a Course at the*
Romyshe Foze, fol. 98, b.

chapines, and clouted Olivarez about the noddle

Clouted. part. adj. Clotted: (applied exclu-
sively to cream).

With flavins, and clouted creame, and country
dainties stored. *Drayton, Polyolbion*, xiv.

I've seen her skim the clouted cream,
And press from spongy curds the milky stream. *Gay*.

[There is no necessity to suppose that
clouted is the proper, clotted the im-
proper, word in this combination; though
such may be the case. The Dutch has
klontermelck; concerning which we may
hold that the change to *clout* is that
which, in Greek, gives *δόλος* as the result
of the elimination of the *ν* in the root
ο-δωρ- (gen. *δδωρος*). But this would
make the *o* in *clotted* long. Meanwhile,
the same language gives *klontermelck*, a
form which admits the insertion of *n*. 'As
clab, *clob* are nasalised in *clamp*, *clump*, so,
corresponding to *clod*, *clot*, we have Da-

nish *klunt*, a log, block; Dutch *klonte*, a
clod, globe, lump. Dutch *klobber-saen*,
kloter-melck, *klonter-melck*, clotted cream,
coagulated milk. The close connexion be-
tween the ideas of a thick mass and the
action of striking is seen in English *clout*,
a blow, Dutch *klotsen*, *kloteren*, *klunderen*,
to beat, batter.—*Wedgwood*.]

Clouted. part. adj.

clou].

ness
Answer'd my steps too loud.

graceful and poetick majesty.—*Phillips, Theatrum*
Poeticum, pref.: 1675.

Clove. s. [Dutch, *kluyve*.—see remarks
under next entry.] Small bulbs formed
round a mother bulb.

'Tis mortal sin an onion to devour;
Each clove of garlick is a sacred pow'r.

Tate, *Translation of Juvenal*.

Clove. s. [Fr. *clou*; Lat. *clavus* = nail.—The
explanation of this connection lies in the
form of the spice so called, which is not
unlike a small-headed nail or tack. The
Malay name means this; and, more or
less, a word of the same import is found
throughout most European languages.
When this is not the case, the term is a
modification of the Latin *caryophyllus*, from
the Greek *κάρων* = date, and *φύλλον* = leaf.
Sometimes the two are united, Dutch,
kruidnagels = krou (vegetable) nails, *grof-
felsnagelen* (the first element being from
caryophyllus); German, *näglein*, *gewürz-
näglein* (spice-nails); Danish, *nelliher*;
Spanish, *clavo aromatico*; French, *clou
de girofle* (*caryophyllus*) and *giroflier*.
That the name for clove as applied to
garlic has a different origin from clove the
spice is indicated by the Dutch word, and
is verified by the fact that in Dutch (as
there is no derivative from the Latin
clavus denoting a nail, but on the con-
trary only the German term *nägel*) there
is no room for confusion. To which it may
be added that in Anglo-Saxon we have
more than one compound of *claf*, as
clafwyr and *claftr*, names of plants which
it is difficult to identify. Upon this point,
however, more will be said under Gilli-
flower.] *Adjectival* construction com-
mon.

1. Unexpanded flowers of *Caryophyllus* aro-

Gilliflower.

clout on the head.' To these add Clunch
and Clown, connected with the notions of

assumed changes of form. For a fuller

No true clubmoss has yet been found in any of the
islands, but a little marsiliaceous plant (*Isotetes*

1653.

Clue. *s.* [see *Clew*.] Ball, bottom, or skein
of thread supposed to have been used by
certain persons as a means of finding their
way through certain mazes or labyrinths;
means of guidance or direction in general;
hint; inkling.

Into what labyrinth of fearful shapes.

My simple project has conducted you—
Were but my wit as skilful to invent
A clue to lead you forth!

C. Lamb, *The Wife's Trial*.

Word for word this is Clew. Neither is it very different in import; the meaning of both words being a bottom or skein of thread, literally in the one instance, figuratively in the other.

Generally, however, they are distinguished in the *spelling*; and this distinction the editor, without approving, adopts. This is because, if one of the two modes of spelling were sacrificed to the other, it would be the one which, on the etymological principle, ought to be preserved. That Clew best represents the A.S. *clive* is as certain as it is that Clue is the form which is likeliest to prevail. The explanation of this difference is partly a matter of pronunciation, partly one of spelling. The true sound of the combination *ew* is that of a diphthong of which the elements are the *e* in *pet*, and *w*. That of *ue* is the *oo* in *food* or *book*, i.e. the long sound of the simple vowel *u*. These sounds are sufficiently alike to be confounded. In the confusion, however, the vowel sound has a tendency to supersede the diphthongal. To hear Blue sounded as *blew*, and True as *trew*, is still common, though the tendency of the simpler pronunciation is to increase in frequency, and finally to eliminate the diphthong *ew* from the language. Nevertheless the latter is the older form, whilst the spelling in *w* is the spelling which best represents the etymology. However, from the fact of its being no part of the Latin alphabet, *w*, like *k*, has been eschewed even in our own language, as much as possible; and where it followed a vowel this eschewal was easy. Hence its elimination from numerous words wherein it appeared in the Anglo-Saxon, such as Blue, Hue, and many others.

The other principle is the one illustrated by such words as *hew* and *blew* (verbs) as contrasted with *hue* and *blue* (nouns). With these, a difference of spelling is an orthographical expedient for indicating a difference of sense.

In *clue*, then and *claw* we get a differentiation of this kind, and it is a remarkable instance; the difference denoted being very slight. Whilst *hue* and *hew*, *blue* and *blew*, differ from one another as different words and different parts of speech, *clue* and *claw* differ merely as the same word in its literal and in its metaphorical sense.

Of course, this applies only to those who sound the two words alike. To anyone who pronounces the Clew in a *claw* of cotton in one way, and the clue in the *clue* to a mystery in another (*claw* and *claw*), the words are really two, and the difference in spelling, which from the present point of view is only excused, becomes justified.

Clump. *s.* [see Crush.] Cluster of trees or shrubs; (anciently a *plump*).

The small and circular *clumps* of firs, which I see planted upon some fine large swells, put me often in mind of a coronet placed on an elephant's or camel's back.—*Shenstone*.

Themselves perhaps, when weary they retreat
To enjoy cool nature in a country seat,
To exchange the centre of a thousand trades,
For *clumps*, and lawns, and temples, and cascades,
May now and then their velvet cushions take,
And seem to pray for good example sake;
Judging, in charity, no doubt the town
Pious enough, and having need of none.

Couper, *Hope*, 247.

Clumper. *s.* [see extract.—this is the base of Clomperton.] Wooden shoe; clog. *Rare*.

Dutch, *klopper*, *klompe*, *klomper*; Platt Deutsch, *klönken*. In like manner from Italian, *zocco*, a shoe, *zoccoli*, clogs, patens. Modern Greek, *zocco*, log, stump of a tree, *zocco*, a clog, wooden shoe; German, *klotz*, a block, log, clog; *klotz-schuh*, a clog, wooden shoe.—Wedgwood, *Dictionary of English Etymology*.]

Clumsiness. *s.* Attribute suggested by Clumsy; awkwardness; ungainliness; want of readiness, nimbleness, or dexterity.

Clumsy. *adj.* [see last extract.] Awkward; heavy; without art; unhandy; without dexterity, readiness, or grace: (used of persons, actions, or things).

The Carthaginians followed the enemies in chase as far as Trebia, and there gave over, and returned to the camp so clumsy (translation of 'ita torpentes gelu') and frozen as scarcely they felt the joy of their victory.—*Holland*, *Translation of Livy*, p. 425. (Trench.)

But thou in clumsy verse, unlick'd, unpointed,
Hast shamefully defy'd the Lord's anointed. Dryden.

That clumsy outside of a porter,
How could it thus conceal a courtier? Swift.

It will very often be found, when we are distracted by two plausible derivations, that they may both be traced to the same ultimate source. If we were not acquainted with the Old English forms we should confidently derive *clumsy* from *clump*, in analogy with Dutch *kluntet*, awkward, clumsy, from *klunt*, a clog, log; Swedish *klubbig*, *klumpig*, *klunsig*, lumpish, clumsy, from *klubb*, *klump*, *kluns*, a block, knob, lump; or Dutch *lomp*, stupid, pigger, from *lompe*, a lump. But the immediate origin of the English word is from the figure of hands contracted or stiffened with cold. Platt Deutsch, *klammen*, *klomen*, *verklamen*, to be stiffened with cold. Icelandic, *klumsa*, suffering from cramp. Old English, *comelyd*, *cumbled*, *clommed*, *clomsid*, stiffened with cold. (Promptorium Parvulorum.) Thou clommed for cold. (Promptorium Parvulorum.) Our hondis ben *clomsid*. (Wicliff in Wayfarers.) Havi de froid, stiff, *clumps*, benumbed.—*Cotgrave*. Thus *clumsy* is awkward and inefficient, like one benumbed with cold. Finnish, *kontas*, stiff with cold, and thence unskilful, slow.—*Wedgwood*, *Dictionary of English Etymology*, in voce.]

It may be added that this connection with cold has the approbation of Archbishop Trench, who considers that it is shown by the fact of its being the translation of 'torpentes gelu.' It is certainly strengthened by these words. By itself, however, the passage is by no means conclusive.

Co., Con-. As we have now arrived at the commencement of that long and important list which contains the compounds of the Latin word *cum* = with, some general remarks upon the forms which it takes in combination may be useful. They will bear more especially upon the changes undergone by the last two letters (*u* and *m*); these changes being determined by the nature of the initial letter of the second element.

As a general rule, the letters under notice (*c-u-m*) are rarely retained unaltered; the *u* becoming *o*, and the *m* becoming *n*.

1. When the second element of the compound begins with a vowel, the *m* is omitted altogether, and the *u* is changed into *o*; the result being *co-*, as in *Coacervate*. The two vowels thus brought together are sounded separately, belonging, as they do, to different syllables, and never constitute either a diphthong or a single long vowel, as in *Count* or *Coat*.

The letter *h* is treated as a vowel, or rather as having no power; so that in *Co-hobation*, for instance, the form taken by *cum* is just what it would have been if the second element had been *-obation*.

2. When the second element of the compound begins with a liquid, the vowel becomes *o*, and the *m* takes the sound and sign of the liquid which follows, whatever it may be, as in *Col-loquy*, *Com-mute*, *Con-notation*, and *Cor-rode*; of which the elements, when separate, are *cum + loquor*, *cum + muto*, *cum + noto*, and *cum + rodo*.

Etymologically, these combinations give us real doublings of the sound, just as we find them in *Bookcase*, *Seaport-town*, and several other words; indeed in all wherein the first element ends with the sound with which the second begins. No one, however, so pronounces them; and it is by no means certain that they were generally sounded double in Latin: indeed, even compounds like the ones just quoted are often sounded *boo-case* or *book-ase*; and *seaport-town* or *seaport-own*, though improperly. And here it may be remarked, parenthetically, that it is only in compounds like these that the true sound of a double letter is found in English. All such spellings as *Butter*, *Better*, *Happy*, and the like, are mere orthographical expedients for showing that the vowel is short. Between the *t*-sounds in being *pitted* for having the smallpox and being *pitted* with the pockmarks themselves there is no difference to the ear; the sound being, in both cases, that of a single *t*.

3. When the second element of the compound begins with a mute, the change is determined by the class to which that mute belongs. In all cases, however, the vowel is *o*, as in *Compensation*, *Combustible*, *Conflict*, *Congruity*, &c.

1.) Before *p* and *b*, and only before the sounds of these two letters, is *m* universally retained; as in *Compensation* and *Combustible*. Before *f* and *v*, though letters belonging to the same class as *p* and *b*, and, like *m*, letters pronounced mainly by the action of the lips, and consequently of cognate character, the rule changes, and the combination requires *n*; as in *Conflict*, *Configuration*, and *Convict*. For the single exception see *Comfort*.

2.) Before *k* and *g* the letter is *n*, but

the sound, instead of being that of the *n* in *kin*, is that of the *ng* in *king*. *Conquest* and *Congruity* are sounded *cong-kwest* and *cong-gruity*, not *con-kwest* and *con-gruity*. This, however, only applies to *g* when sounded as in *gun*. In words like *Congestion*, it is but another sign for *j*, which is really *d* followed by *zh*, *con-dzhestion*. For its sound before *gh*, see *Conglobate*.

3.) Before *t* and *d* the sound as well as the sign is that of *n*, as in *Conturbation*, *Condolence*. That it is never that of *m* may be laid down as an invariable rule. Whether, however, *con-* is not (as with the vowel combinations) sometimes changed into *co-* is doubtful. For more on this point, see *Contemporary*. Before the sounds of the *th* in *thin* and *thine*, the element under notice is never found, those sounds being wanting in Latin.

4.) Before *s*, and the sound of *sh* as in *Conscience* (a combination not found in Latin), the letter is *n*.

It is not difficult to generalize these rules; the more so as they are, with slight modifications, rules of language in general, being founded upon the relations of *m* and *n* to other sounds. Thus *m* being labial, or sounded chiefly by means of the action of the lips, has, to use a term borrowed from the language of Chemistry, a special affinity with *p* and *b*, sounds similarly produced; and in a less degree with *f* and *v*. In like manner *n* comports itself to *t* and *d*, and *ng* to *k* and *g*. The other details are less important. Those, however, which have been given are plain and patent enough to have been recognized in more than one alphabet. In the Sanskrit, for instance, there is a special letter for each modification. In our own language *m* is limited to *p* and *b*; *f* and *v* being, contrary to what the general philologue expects a priori, in the same category with *d* and *t*, i.e. preceded by *n*. This limitation of the use of *m* is sufficiently obvious; the chances of any doubt between it and *n* being small.

With *n*, however, and the omission of *n*, the case is widely different. It is a fact beyond dispute, that in many words where the rule as it stands at present would give *c-o-n*, we find only *c-o*; in other terms, *n* before *t* or *d* comports itself as *n* before a vowel. No one says *con-trustee*, but, on the contrary, *co-trustee*; and so it is in many other words. What we have to say to cases like this is that *co-* and *con-*, though words of the same origin, are, under the present view, different words; and that the rules just laid down apply to the combinations in question only when treated as combinations belonging to the Latin language, from which the words in which they occur are generally supposed to have been introduced, *ready-made*, into our own. When the two elements, however, are put together in English, the case is different, as may be seen in such words as *Co-mate*, *Co-partner*, *Co-parcener*. For further remarks on this point see *Co-mate* and *Contemporary*.

Lastly, a distinction should be drawn between those words wherein *cum* (*con-*) retains its significance and clearly denotes union or association, and those wherein its original meaning is either lost or but dimly seen. For an instance of this see *Con-temn*. The use of this remark is to guard

us against taking compound for simple words merely from the facts of their being either undecomposable or of the same import as the simple term. The one that precedes it is the more important. Fully understood it tells us that, though sound for sound identical, the particles are in reality two. 1. The first, *co-* is wholly Latin, and is *con-*, or *cum*, modified in form according to the sound by which it is followed; capable, also, of again becoming *con-*, or *cum*, when the sound by which it is followed is changed. 2. The second, though Latin in its origin, is, practically, English. It is not only *co-*, but always *co-*, irrespective of the sound which it precedes, and incapable of being interchanged with either *cum* or *con-*. The former belongs to such words as are taken as *wholes* from the Latin; the latter to such as are formed by putting the parts together in English. Such is the principle, and it is a simple one. That its application is very much the contrary will be seen in the sequel. Between words borrowed as wholes, and words made up by putting together their parts, the distinction is often difficult; and it is one for which the reader should be prepared.

It had the passions in perfect subjection; and though its command over them was persuasive and political, yet it had the force of *coaction* and despotical.—South.

In the following extract it seems to mean bringing together. If so, its origin is *con* and *ago* in the fuller form of the combination, rather than *cogo*.

Christ left all men in liberty to marry, if they list; forbidding all men tyrannically to make any law of *coaction* or of separation, where God hath set freedom in marriage.—Bale, *Actes of English Volaries*, i. 16: 1560.

Coactive. *adj.*

Valerius procured Augustine in his life-time to be designed bishop of Hippo, and to be joined fellow-bishop with himself, though it was flatly against the canons. I find a learned and late canonist has very much about *coadjutors*; but it is for *coadjutors* to archdeacons, and dignified men, below the order of bishops.—Bishop Barlow, *Remains*, p. 160.

Coapprehend. v. a. The difference between this compound and the simple form *apprehend*, as far, at least, as the following extract goes, seems to rest upon a confusion between the joint character of the things perceived and the joint character of the perception; to the latter of which it properly applies. In the case before us it was probably suggested by the *syn* of the word *syn-taxis* (=co-arrangement) which follows. Unless this view be taken, the meaning must be, 'Perform an act of complex apprehension.' A true *coapprehension*, however, consists in one object being apprehended by two persons, rather than two objects by one. *Obsolete*.

Over this armour the knight wore a dress usually
denominated a surcoat or a tabard, . . . it was always
... sleeveless. As this surcoat was worn over the
armour upon grand occasions, it was here that the
growing taste for splendour and ornamentation
developed itself with the greatest rapidity. Cloths
of gold or silver, ermine, miniver, sables, or other
rich furs, were employed in its manufacture. The
arms were borne upon this garment, whence the

But the baron sat down upon the glass and broke
it, and cut his coat-tails very much.—*Thackeray,*
Book of Snobs, ch. ii.

Coax. v. a. [the spelling with x thoroughly
disguises the origin of this word; that let-
ter being, in most cases, the representa-
tive of either the Latin x or the Greek ξ:
on the other hand, to spell it with k would
disguise its French origin.—see last ex-
tract.] Wheedle; flatter; humour.

the neighbouring rusticks, give them a buck he had
hunted.—*Heath, Flagellum, p. 159: 1679.*

ably from the French cocasse, one who says or
does laughable or ridiculous things. (Trevoix.) Co-
casse, plaisant, ridicule; cocosse niais, imbécille.
(Hécart.) To cokes or coax one then is to make a
cokes or fool of him, to wheedle or gull him into
doing something.—*Wedgwood, Dictionary of Eng-
lish Etymology, in voce.*]

- Coax. s.** Dupe; person wheedled. *Obsolete.*

mont and Fletcher, Wit at several Weapons.*

We will, my mistress, an absolute fine cokes,
And mock, to air, all the deep diligences
Of such a solemn and effectual ass.

B. Jonson, The Devil is an Ass.
Coaxation. s. [from the κοῦξ in βρεκεκεκί,
κοῦξ, κοῦξ, which, in the Βάρφαροι (Frogs)
of Aristophanes, makes the chorus of a
concert of frogs.] Croaking. (The follow-
ing extract is given with the recommend-
ation of its indicator.)

The maker, for example, of an English Dictionary
may not consider 'mulerosity' or 'subsannation'
or 'coaxation', . . . or a thousand other words of a
similar nature (I take all these from a single work
of Henry More) to contribute much to the riches of
the English tongue; yet he has not therefore any
right to omit them. [Then in note:] 'The importu-
nate, harsh, and disharmonious coaxations of frogs.'
(Mystery of Iniquity, b. i. ch. vi. § 16.)—*Archbishop*
*Trench, On some Deficiencies of our English Dic-
tionaries.*

Sweet cider, which my leathern bottle brings;
Sit down, Carmela, let me kiss thy toes.

Cóbal. s. [German, kobold = goblin; the
mines that yield the metal being supposed
to be haunted; or a goblin, for some other
reason, being connected with the metal.]
Brittle metal of a greyish colour, used in
the state of oxide to give a beautiful blue
colour to porcelain and glass.

Cóbal is plentifully impregnated with arsenick;
contains copper and some silver. Being sublimed,
the flores are of a blue colour: these German mine-
ralists call zaffir.—*Woodward.*

Cóbal is a dense, compact, and ponderous mineral,
very bright and shining, and much resembling some
of the antimonial ores. It is found in Germany,
Saxony, Bohemia, and England; but ours is a poor
kind. From cobalt are produced the three sorts of
arsenick, white, yellow, and red; as also zaffre and
smalt.—*Sir J. Hill, On Fossils.*

The principal ores of cobalt are those designated
by mineralogists under the names of arsenical
cobalt and gray cobalt. The first contains, in ad-
dition to cobalt, some arsenic, iron, nickel, and occa-
sionally silver, &c. The other is a compound of

cobalt with iron, arsenic, sulphur, and nickel.
Among the gray cobalts, the ore most esteemed for
its purity is that of Tunaberg in Sweden. It is often
in regular crystals which possess the lustre and
colour of polished steel.—*Ure, Dictionary of Arts,*
Manufactures, and Mines.

- Cóbble. v. a.** [see last extract under Cob-
ble, s.]

1. Mend anything coarsely: (used generally
of shoes).

Nay, I beseech you, sir, be not out with me: yet
if you be out, sir, I can mend you.—What mean'st
thou by that? Mend me, thou saucy fellow?—Why,
sir, cobble you.—Thou art a cobbler, art thou?—
Shakespeare, Julius Caesar, i. 1.

2. Do or make anything clumsily or un-
handily.

Is it not a firmer foundation for contentment and
tranquillity, to believe that all things were at first
created, and are since continually ordered and dis-
posed for the best, and that principally for the
benefit and pleasure of man, than that the whole
universe is mere bungling and blundering; nothing
effected for any purpose or design, but all ill fa-
vouredly cobbled and jumbled together?—*Bentley,*
Sermos, i.

in a cobblering manner, i.e. badly.

Employs a pen less pointed than his awl,

plaud!
How ladies read, and literati laud!

Cobble.—A round stone, a pebble. From the sound
of pebbles rolling on the beach, as pebble, in like
manner from Danish pibbe, to purr. Tsch, kabbe-
len, to beat a war against a bank or on the shore,

cuogolo (Skinner), agreeing with Greek κεχλη,
Turkish chakli, a pebble, from a like derivation
given under Chuck.—*Wedgwood, Dictionary of*
English Etymology.]

- Cóbbled. part. adj.** Badly made or mended,

ble, s.] Pebble.

- Cóbbling. part. adj.** Like cobbler's work;
badly done.

Such cobblering verses no poetaster before ever
turned out.—*Lamb, Letter to Barton.*

- Cóbbling. verbal abs.** Doing of cobbler's
work; bungling.

their trade, have raised themselves from cobblering to
fluxing.—*Sir R. L'Estrange.*

Cocculus (Indicus). s. [Lat. = Indian berry; *cocculus* being a diminutive of *coccus* = berry.] See extract. In common use, though neither an English nor a single word.

Cocculus Indicus, or Indian berry, is the fruit of the *Menispermum Cocculus*, a large tree which grows upon the coasts of Malabar, Ceylon, &c. The fruit is blackish, and of the size of a large pea. It owes its narcotic and poisonous qualities to the vegetable alkaline chemical principle called *picrotoxin*, of which it contains about one-fiftieth part of its weight. It is sometimes thrown into waters to intoxicate or kill fishes; and it is said to have been employed to increase the inebriating qualities of ale or beer. Its use for this purpose is prohibited by Act of Parliament, under a penalty of 200*l.* upon the brewer, and 500*l.* upon the seller of the drug.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Cochineal. s. [Spanish, *cochinella* = wood-louse.] Insect so called used as a dye.

Cochineal was taken in Europe at first for a seed, but was proved by the observations of Levenhoeck to be an insect, being the female of that species of shield-louse or *coccus*, discovered in Mexico so long ago as 1518. It is brought to us from Mexico, where the animal lives upon the Cactus *Opuntia* or *nopal*. Two sorts of *cochineal* are gathered—the wild, from the woods, called by the Spanish name *grana silvestra*; and the cultivated, or the *grana fina*, termed also *mestecque*, from the name of a Mexican province.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Cochleary. adj. [Lat. *cochlea* = snail, whence spire or screw, that being shaped like a snailshell.] Screw-shaped; in the form of a screw.

COCK

Cochleated. adj. Screw-shaped; turbinate.

Cock. s. [Provincial Danish, i.e. in Jutland, *cock* = bird.] In the German languages in general, the words for *cock* and *hen* are modifications of each other, *hahn* and *huhn*.

Another reason for believing that the original meaning of the word is *bird*, rather than *male*, is the relation borne to it by the words *chick* and *chicken*, evident derivatives; and that of a diminutive character, rather than derivatives connected with gender. In Greek the word *ὄρνις* was sometimes used specially for the *cock*.

No combination of sounds conveys so many different meanings as the one under notice. In the previous editions they are nearly all treated as the same word. In the present there is possibly an error in the opposite direction, and too many originally different words are perhaps assumed. Nevertheless, when the same combination of letters gives us a *bird*, a *tap*, a *boat*, &c., not to mention its power as a verb, it is better to err on the side of separation than on that of confusion.

1. Male of poultry.

Cocks have great combs and spurs; hens little or none.—*Bacon, Natural and Experimental History*.

—*Addison*.

But at cuffs I was always the *cock* of the school.

Swift.

Cock-a-hoop. The *h* here, like the *h* in *hooping-cough*, doubtless represents a *wh*; so that, although *whoop* is not an unexceptionable word for the crow of a cock, a *cock-a-whoop* is far more intelligible than the same bird balanced on a *hoop*, as he may occasionally be seen on the signboards of inns.

Now I am a frisker, all men on me look;
What should I do but set *cock* on the hoop?

Camden, Remains.

You'll make a mutiny among my guests!
You will set *cock* a hoop!

And bending *cock*, he level'd full

Cock. s. [? *cop*.] Small heap of hay.

Cóckhorse. adv. [two words rather than a compound. The combination in full is a-cockhorse (= on cock-horse, and sounded a-cockhorse), so that the real grammar of the word is best given in the nursery rhyme,
'Ride a-cockhorse
To Banbury Cross.

Another explanation would make it a corruption, for nursery purposes, of *across*.

In either case, however, the full construction requires a.] On horseback; triumphantly; exultingly.

We may, I think, from the make of an oyster, or cockle, reasonably conclude, that it has not so many, nor so quick senses, as a man.—*Locke.*

Warm the cockles of the heart. Comfort the inside. (The most probable explanation of this expression lies (1.) in the likeness of a heart to a cockleshell; the base of the former being compared to the hinge of the latter; (2.) in the zoological name for the cockle and its congeners being *Cardium*, from the Greek *kardia* = heart.)

Cóckle. s. [A.S. *coeca*.] Weed so called (*Agrostemma Githago*) growing in corn-fields; gith: (used, like tares, for weeds in corn generally).

Cocklestairs. s. Older term for what is now called a corkscrew staircase.

Cockloft. s. [probably a translation of the Latin *cœnaculum*, its originator having in his mind a well-known passage in Juvenal:

'Ultimus ardebit quem tegula sola tuetur
A pluvia; molles ubi ponunt ova columbæ.' Sat. iii.

Not a genuine term in English domestic architecture.]

1. False roof of a house, which may serve as a loft for birds: (either from sparrows and other wild birds nesting in it, or from being used for keeping pigeons).

The word *cœnaculum* in the most usual and latest Roman sense is still meant of the garret, or *cockloft* as we call it; which was indeed the most contemptible part of the house, and of no better use than to be hired out to very ordinary and common people. —Gregory, *Notes on Scripture*, p. 16.

If the lowest floors already burn,
Cocklofts and garrets soon will take their turn.

My garrets, or rather my *cocklofts* indeed, are very indifferently furnished; but they are rooms to lay lumber in.—Swift.

2. Head. *Colloquial*, or *slang*.

Oftentimes such who are built four stories high, are observed to have little in their *cock-loft*.—Fuller.

Cockmaster. s. [the second element is *master* not so much in the ordinary sense of *possessor*, as in that of *teacher*, *trainer*; i.e. the one which gives the relation of master and apprentice, rather than that of master and simple servant.] One who breeds gamecocks. *Rare*.

A *cockmaster* bought a partridge, and turned it among the fighting cocks.—Sir R. L'Estrange.

Cockmatch. s. Cockfight for a prize.

At the same time that the heads of parties preserve towards one another an outward shew of good breeding, their tools will not so much as mingle at a *cockmatch*.—Addison.

Though quail-fighting is what is most taken notice of, they had doubtless *cockmatches* also.—Arbuthnot and Pope.

Cockney. s. often used *adjectivally*, as in 'cockney notions,' 'cockney prejudices,' the 'cockney school of poetry.' [see last extract.] Person born in London; southerner (as opposed to a *northerner*); townsman (as opposed to a *country* person); one ignorant of things known familiarly in the country.

For who is such a *cockney* in his heart,
Proud of the plenty of the southern part,
To scorn that union, by which we may
Boast 'twas his countryman that writ this play?

Hence I believe it was, that that synod's geography was as ridiculous as a *cockney's*, to whom all is Barbary beyond Brainford, and Christendome endeth at Greenwich.—Whitlock, *Manners of the English*, p. 221: 1654.

The *cockney* travelling into the country is surprised at many common practices of rural affairs.—Watts.

On the whole, Pultenham considers the best standard both for speaking and writing to be the 'usual speech of the court and that of London, within sixty miles, and not much above.' This judgement is probably correct, although the writer was a gentleman pensioner, and perhaps also a *cockney* by birth.—Crask, *History of English Literature*, i. 421.

[The etymology of this word has indeed exercised the conjectures of the learned in various ways. Meric Casaubon would refer it to the Greek *oikoyēns* (*oicogenēs*), one born and bred at home. Gratifying as such an origin must be, in point of classical antiquity, to those who are still called *cockneys*, it would now be difficult to find a believer in this imposing and sonorous etymon! . . . Hulot, in a similar manner, explains to *play the cockney*, to play the fool. After him comes Barret, late in the reign of Elizabeth, who defines a *cockney*, 'a child tenderly brought up, a dearing.' This may seem to countenance the opinion of those who derive the word from *cocker* or *cock*; and which Decker, a writer

contemporary with Barret, in his Knight's Conjuror, boldly affirms to be the derivation. 'Tis not their fault, but our mothers', our *cockering* mothers', who for their labour make us to be called *cockneys*.' Peage, in his *Anecdotes of the English Language*, inclines to this etymology; deducing it, however, from the old French *coqueliner*, to fondle, participle *coqueliné*, whence, by dropping the penultimate, *coquené*. Mr. Douce thinks, that the word may have once been a term of fondness used towards male children, (in London more particularly,) as *pigney* in like manner has been applied to a woman. Mr. Ellis, in his specimens of the Early English Poets, deduces it in conformity to a remark made by Mr. Tyrwhitt that the word is probably borrowed originally from the kitchen, i.e. from *coquina*; and he cites a passage from Pierce Plowman's Visions, 'I have no salt bacon, ne no *cokeney*, collops for to make,' to shew that *cockney* means a *cock*, and that therefore the intelligence which the inhabitants of the metropolis displayed in the *culinary art* might have procured them the appellation of *cockneys* from the uplandish or country-men. But *cokeney*, in the passage which he cites, unfortunately means nothing more than a *little cock*, as Mr. Douce also has observed; the dish to be prepared, but not the *cock* to dress it. The authority of Bishop Percy and Mr. Tyrwhitt in thus also assigning, in the old ballad of The Turnment of Tottenham, the meaning of *cock* to *cokeney*, has been rightly questioned by Mr. Douce.

'At that feast where they served in rich array,
Every five and five had a *cokeney*.'

where it signifies a *little cock*, or perhaps a *peacock*, a favourite dish among our ancestors. Colgrave, under the word *Coquine*, calls a '*cockney* a simple-de-cockit, a nice thing.' The citation of Camden in his Britannia,

'Were I in my castle of Bungey
Upon the river of Waveney

I would ne care for the king of *Cockney*!' shews, whencesoever the triplet comes, that London was known by this name; and hence a *cockney* might be assumed for a *Londoner*. After all, there is most reason to believe, that this contemptuous or satirical expression originates in that imaginary region of luxury and idleness formerly called *Cocaigne*, or *Plenty*; as in the poem cited by Hickee. Probably the festival of the *Cocagna* at Naples may have suggested the poem as well as the word. . . . Hobbes, in allusion to the old poem, has 'the land of *Cockany*, where fowls ready roasted cry, come and eat me;' for, among the delicacies of this happy country, ready roasted geese fly into the house, exclaiming, all hot, all hot!—Todd, in voce.]

All the editor feels sure of is that it is in the word *Cocaigne* as applied to a fictitious district that the origin of the word lies; a *cockney* being a native of the land so called.

Cockneylike. adj. Resembling the manners or character of a *cockney*.

Some again draw this mischief on their heads by too ceremonious and strict diet, being over precise, *cockney-like*, and curious in their observations of meats, &c.—Burton, *Anatomy of Melancholy*, p. 78.

Cockpit. s.

If the hard stalks of the *cocksfoot* . . . had been in sufficient quantity, they would most probably have prevented the disease from attacking the sheep.—G. Sinclair, *Hortus Gramineus Woburnensis*, p. 9.

Cockshut. s. [the *cock* is the *cock* in wood-cock; the *shut*, assuming that the division of the word is *cock-shut* rather than *cocks-hut*, is, probably, connected with *shuttle*.] Twilight. (The received explanation of this meaning is that the *cockshut* was a net for catching woodcocks at the close of the day; the glades or avenues in the woods which the birds were then supposed to seek being called *cockroads*. See the notes of the commentators on the passage which supplies the extract.) Used *adjectivally*, or as the *first element* in a compound.

Surrey and himself,
Much about *cockshut* time, from troop to troop,
Went through the army.

Shakespeare, *Richard III.*, v. 3.

Cocksorrel. s. [though at present it is only the French sorrel that is cooked, *cocksorrel* is a probable derivation. As the name is not applied to the wood-sorrel, equally palatable but never taken for a culinary herb, the prefix may be used as a distinction.] Popular name for the larger variety of the native sorrel (*Oxalis acetosa*), which boys are in the habit of chewing on account of its acid. *Colloquial*.

Cocksure. adj. [? two words rather than a compound.] Confidently certain; without fear or diffidence.

Cocoa, or Cacao. s. [?] Fruit of the Theobroma cacao, the chocolate (not the coco) nut; beverage prepared from it.

Linnaeus was so fond of it that he gave the specific name Theobroma, food of the gods, to the cacao tree, which produced it. The cacao beans lie in a fruit somewhat like a cucumber, about five inches long and three and a half thick, which contains from twenty to thirty beans arranged in five regular rows, with partitions between, and which are surrounded with a rose-coloured spongy substance like that of watermelons.—Ure, *Dictionary of Arts, Manufactures, and Mines, Chocolate*.

Cocoa or *cacao* is either prepared by grinding up the roasted seeds with their outer shells or husks between hot cylinders into a paste, which is then mixed with starch, sugar, &c.—this forms common *cocoa*, roach *cocoa*, soluble *cocoa*, &c.,—or the roasted seeds divested of their husks are broken into small fragments, in which state they form *cocoa nibs*, the purest state of *cocoa*. The husks of the *cocoa*-seeds are used by the poorer classes of Italy and Ireland in the preparation of a wholesome and agreeable beverage: they are imported from Italy under the name of 'miscible.' Both *cocoa* and chocolate are used for the preparation of agreeable and nutritious beverages.—R. Bentley, *Manual of Botany*, p. 471.

Coconut. s. Fruit of the *Cocos nucifera*, or coconut palm.

Draws different threads, and late and soon
Spins, toiling out his own *cocoon*.

Having acquired its full size, it begins to discharge a viscid secretion in the form of pulpy twin filaments . . . which harden in the air. These threads are instinctively coiled into an ovoid nest round itself, called a *cocoon*, which serves as a defence against living enemies and changes of temperature. — *Ure, Dictionary of Arts, Manufactures, and Mines, Silk.*

Cocotion. *s.* [Lat. *coctio*, -onis, from *coquo* = cook.] Act of boiling.

The disease is sometimes attended with expectoration from the lungs, and that is taken off by a *cocotion* and resolution of the feverish matter, or terminates in suppurations or a gangrene. — *Arbuthnot, On the Nature and Choice of Aliments.*

Of *codfish* alone the number taken in one day is very considerable. . . . The largest *codfish* I have a record of weighed sixty pounds, was caught in the Bristol Channel, and produced five shillings. . . . The young of the *cod* . . . when of whiting size, are called *codlings* and skinnors, and, when larger, Tumbling or Tamlin *cod*. — *Yarrell, British Fishes.*

Code. *s.* [Lat. *codex*.] Body of classified laws.

We find in the Theodosian and Justinian code the interest of trade very well provided for. — *Arbuthnot, Tables of ancient Coins, Weights, and Measures.*
Indentures, covenants, articles they draw,
Large as the fields themselves; and larger far
Than civil *codes* with all their glosses are.

Pope, Satires.
A *code* of laws is like a vast forest; the more it is divided the better it is known. To render a *code* of laws complete, it is necessary to know all the parts which should be comprised in it. It is necessary to know what they are in themselves, and what they are in relation to one another. This is accomplished when taking the body of laws in their entirety; they may be divided into two parts, in such manner that everything which belongs to the integral body may

be found comprised in one or the other part, and yet nothing shall, at the same time, be found in both. . . . In a *code* of laws everything turns upon offences, rights, obligations, services. . . . If the distinction between the civil and the penal *code* be enquired for, the greater number of jurists consults reply that the civil *code* contains the descriptions of rights and obligations, and the penal *code* those of crimes and punishment. — *Bentham, General View of a complete Code of Laws.*

Sylvester, Du Bartas, 50. (Ord MS.)

Codliver (-oil). *s.* See extract.

The oils obtained from the livers of the different species composing the tribe Gadidae, appear to be very similar. . . . To all of them the term *Oleum Jecoris Aselli*, *Oleum Jecoris Gadi*, is indiscriminately applied; though it is commonly used, especially in this country, to indicate the oil procured from the liver of the common *cod*. It would be better then to apply the term *Oleum Jecoris Morrhue*, or simply *Oleum Morrhue*, when it is intended exclusively to designate the latter oil. Among London dealers I have met with one kind of *cod-liver* oil. Its colour is chestnut brown, and its odour is like that of boiled *cod's* liver. — *Pereira, Materia Medica.*

The managing and carrying on of this work, by the spirit's instrumental *coëficiency*, requires, that they be kept together, without distinction or dissipation. — *Glennville, Sceptis Scientifica.*

Coefficient. *s.* [Lat. *con* = with, *efficiens* = accomplishing.] That which unites its action with the action of another.

a. In *Algebra*. Number or known quantity prefixed as a multiplier to a variable or an unknown quantity.

Such numbers or given quantities, that are put before letters, or unknown quantities, into which letters they are supposed to be multiplied, and so do make a rectangle, or product with the letters; as *4a*, *6a*, *6ax*; where *4* is the coefficient of *a*, *6* of *ax*, and *c* of *6ax*. — *Chambers.*

b. In *Fluxions*. Quantity arising from the division of any generating term by the generated quantity.

From thence are derived rules for obtaining the fluxions of all other products and powers; be the coefficients or the indexes what they will, integers or fractions, rational or surd. — *Bishop Berkeley, Analyst*, § ix.

Professor Playfair has presented nearly the same argument, although in a different and more mathematical form. If the velocity change, says he, it must change according to some expression of calculation depending upon the time, or, in mathematical language, must be a function of the time. If the velocity diminish as the time increases, this may be expressed by stating the velocity in each case as a certain number, from which another quantity, or term, increasing as the time increases, is subtracted. But Playfair adds, there is no condition involved in the nature of the case, by which the coefficients, or numbers which are to be employed, along with the number representing the time, in calculating this second term, can be determined to be of one magnitude rather than of any other. Therefore he infers there can be no such coefficients, and that the velocity is in each case equal to some constant number, independent of the time; and is therefore the same for all times. — *Hewell, Philosophy of the Mechanical Sciences.*

Coëlder. *s.* Elder of the same rank: (in the following a mere etymological rendering of a Greek word).

The elders which are among you I exhort, who also are elders, 1 Pet. v. 1. He exhorts, not commands: He also is an elder, i.e. as others are. In the original it is *ἐμπειροβύτερος*, *coelder*. — *Trapp, Popery truly stated*, pt. i. § 5.

Coercitive. adj. Restraining; coercive. *Rare.*

Its disorders were forgotten, or rather were less odious to a rude nation than the coercive justice by which they were afterwards restrained.—*Hallam, Middle Ages,* pt. ii. ch. viii.

Coercive. s. Power of coercion; constraining power. *Rare.*

Coessentiality. s. Participation of the same essence.

The appellation of the Son of God, assumed by him [Christ], implies the same kind of relation to him, as that of a man to his father; that is, it implies coessentiality with God, and therefore equality of nature, and consequently divinity in its full extent.—*Bishop Burgess, Sermon on the Divinity of Christ,* p. 41: 1790.

Coestablishment. s. Joint establishment.

The morals of the community will be better secured by an exclusive establishment, at the public expence, of the teachers of one sect, than by a coestablishment of the teachers of different sects of christians.—*Bishop of Landaff (Watson), Charge,* p. 11: 1791.

Coexist. v. n. Exist at the same time.

The three stars that coexist in heavenly constellations are a multitude of stars.—*Sir M. Hale, Origination of Mankind.*

Of substances no one has any clear idea, farther than of certain simple ideas coexisting together.—*Locke.*

With with.

It is sufficient that we have the idea of the length of any regular periodical appearances, which we can in our minds apply to duration, with which the motion or appearance never co-existed.—*Locke.*

The axiom—'Things which coexist with the same thing coexist with each other,' cannot, however often repeated, help us to any knowledge beyond that of the coexistence of an indefinite number of things; any more than the axiom—'Things which are equal to the same thing are equal to each other,' can, by multiplied application, do more than establish the equality of some series of magnitudes.—*Herbert Spencer, Principles of Psychology,* p. 126.

Coexistence. s. Existence at the same time with another; concurrent, or simultaneous, existence.

The grouping together of the like coexistences and sequences presented by experience, and the formation of a belief that future coexistences and sequences will resemble past ones, is the common type of all initial inferences, whether they be those of the infant or of the philosopher.—*Herbert Spencer, Principles of Psychology,* pt. iii. ch. i.

When we affirm that all crows are black, or that all negroes have woolly hair, we assert an uniformity of coexistence. We assert that the property of blackness, or of having woolly hair, invariably coexists with the properties which, in common language, or in the scientific classification that we adopt, are taken to constitute the class crow or the class negro.—*Mill, Logic,* b. iii. ch. xxii. § 4.

So long as only coexistence or non-coexistence, simultaneity or non-simultaneity, is the thing predicated, quantity of time can scarcely be said to be involved.—*Ibid.*

In Scotland, during the eighteenth century, superstition and science, the most irreconcilable of all enemies, flourished side by side, unable to weaken each other, and unable, indeed, to come into collision with each other. There was co-existence without contact. The two forces kept apart.—*Buckle, History of Civilization in England,* vol. ii. ch. vi.

With to.

The measuring of any duration, by some motion, depends not on the real coexistence of that thing to that motion, or any other periods of revolution.—*Locke.*

With with.

We can demonstrate the being of God's eternal ideas, and their coexistence with him.—*Grew, Cosmologia Sacra.*

Coexistent. adj. Having existence at the same time with another.

All modes of extension are resolvable into relations of coexistent positions. Space is known to us as an infinitude of coexistent positions that do not resist: Body as a congeries of coexistent positions that do resist. The simplest extension therefore, as that of a line, must be regarded as a certain series of co-existent positions; equal lines, as equal series of co-existent positions; and coextension, as the equality of separate series of coexistent positions—that is, the sameness in the number of coexistent positions they include.—*Herbert Spencer, Principles of Psychology,* p. 297.

With to. *Rare.*

To the measuring the duration of any thing by time, it is not requisite that that thing should be co-existent to the motion we measure by, or any other periodical revolution.—*Locke.*

All that one point is either future or past, and no parts are coexistent or contemporary with it.—*Bentley.*

Coexistent. s. That which coexists with another.

The principle of elimination . . . he [Bacon] deemed applicable in the same sense, and in as unqualified a manner, to the investigation of the coexistences, as to that of the successions of phenomena. He seems to have thought that as every event has a cause, or invariable antecedent, so every property of an object has an invariable coexistent, which he called its Form; and the examples he chiefly selected for the application and illustration of his method, were inquiries into such Forms; attempts to determine in what else all those objects resembled, which agreed in some one general property, as hardness or softness, dryness or moistness, heat or coldness.—*J. S. Mill, System of Logic,* b. iii. ch. xxii. § 4.

Coexténd. v. a. Extend over the same part of space or time in conjunction with something else.

Has your English language one single word that is coextended through all these significations?—*Bentley, Phileleutherus Lipsiensis,* ii. § 35.

Coextension. s. Act or state of extension over the same space or duration with another.

The second objection is, that coextension, as ordinarily determined by the juxtaposition of the coextensive objects, involves no comparison between two series of states of consciousness, but merely an observation that the ends of the objects coincide: and this is true. But it is clear that this mode of ascertaining coextension is nothing but an artifice, based upon the experience that extensions separately known to us through the equal series of states they produce, always manifest this coincidence of their ends when placed side by side.—*Herbert Spencer, Principles of Psychology,* p. 299.

Coextensive. adj. Having the same extent.

The objects of the society are coextensive with the true spirit of christian charity.—*Bishop of Winchester (North), Sermons.*

(See also extract under Coextension.)

Coextensiveness. s. Attribute suggested by

Coextensive: (so far as it differs from Coextension, it does so in suggesting that the object to which it applies is not only extended, i.e. endowed with extent, as is the case with the smallest particle, but that it is extensive, i.e. extended largely. Every view or prospect has the property of extent; it is only when it is a wide one that we call it extensive).

While, in any such task as that of the exhibition of a remedy so much approaching to co-extensiveness with the disorder, no ground appears for supposing any other hand at present engaged.—*Bentham, Justice and Codification Petitions, Advertisement.*

Coffee. s. [Arabic, *kawah*.—see also third extract.] Berry of the *Coffea arabica*, or coffee tree; infusion of the berries.

They have in Turkey a drink called coffee, made of a berry of the same name, as black as soot, and of a strong scent, but not aromatic; which they take, beaten into powder, in water, as hot as they can drink it. This drink comforteth the brain and heart, and helpeth digestion.—*Bacon.*

To part her time 'twixt reading and bohea,

Or o'er cold coffee trifle with the spoon.

Pope.

[Though he rejects all generic names which have not a Greek or Latin root, he is willing to make an exception in favour of those which from their form might be supposed to have such a root, though they

are really borrowed from other languages, as *Thea*, which is the Greek for goddess; *Coffea*, which might seem to come from a Greek word denoting silence (*καφός*); *Cheliranthus*, which appears to mean hand-flower, but is really derived from the Arabic *keiri*; and many others.—*Wheelwright, Novum Organon renovatum*, aphorism xxii.]

Used either *adjectivally* or as the *first element* in a compound; there being few words in which the difference of the two is less shown in the spelling, the same author, as may be seen in the extracts, writing *coffee-bush* and *coffee tree*. In sound it is generally a true compound, i.e. a word with but one accent.

1. More adjectival than compound.

In the *coffee husbandry* the plants should be placed eight feet apart.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Coffee beans contain also a resin and a fatty substance somewhat like suet.—*Ibid.*

Although the *coffee plant*, the 'k'awāh' of the Arabs, which is a native of Africa, was known in Yemen at an early period, it is doubtful whether there, or in any other country in the world, its use as a stimulant had been discovered before the beginning of the fifteenth century. The Arabs introduced it early into India; and before the arrival of the Portuguese or Dutch, the tree had been grown in Ceylon; but the preparation of a beverage from its berries was totally unknown to the Singhalese, who only employed its tender leaves for their curries, and its delicate jasmine-like flowers for ornamenting their temples and shrines.—*Ibid.*

The *coffee tree* flourishes in hilly districts where its root can be kept dry while its leaves are refreshed with frequent showers.—*Ibid.*

2. More compound than adjectival.

The following notice of the cocoon [Lecanium *coffea* Walker] known in Ceylon as the *coffee-bug*, and of the singularly destructive effects produced by it on the plants, has been prepared from a memoir by the late Dr. Gardner, in which he traces the history of the insect from its appearance in the coffee districts, until it had established itself more or less permanently in all the estates in full cultivation throughout the island.—*Sir J. E. Tennent, Ceylon*, pt. vii. ch. vi. note.

In lieu of the belief that a *coffee-bush*, once rooted, would continue ever after to bear crops without manure . . . every estate is now tended like a garden.—*Ibid.* pt. vii. ch. vi.

The crisis, had it not been precipitated by the calamities of 1845, must inevitably have ensued from the indiscretions of the previous period; and the healthy condition in which *coffee-planting* appears at the present day in Ceylon, results from the correction of the errors then committed.—*Ibid.*

Pipes mounted with diamonds and begemmed *coffee-cups* were handed about.—*W. H. Russell, The Crimean War*, ch. vi.

Cogential. adj. See Congenial, for which it is another form; one which was always rarer than Cotemporary, as opposed to Contemporary, and which is now wholly obsolete. For remarks upon the use and abuse of these two forms, see Contem-porary.

or conceived as a thought; capable of
being the subject of thought. See Cog-
noscible.

But, as creation is *cógitable* by us only as a putting

conceivable as a withdrawal of that same power.—
Sir W. Hamilton, Discussions, p. 593.

Cógitate. *v. n.* [Lat. *cógitatus*, part. from
cógitare = think.] Think.

As the life of the body is entertained in still *cógi-
tating*, so is our spirit nourished in reducing to me-

1. Thought; act of thinking.

strangers from the life of God, from the ignorance
which is in them.—*Hooker.*

A picture puts me in mind of a friend; the inten-
tion of the mind in seeing, is carried to the object
represented, which is no more than simple *cógitation*
or apprehension of the person.—*Bishop Stil-
lingfleet.*

This Descartes proves, that brutes have no *cógitation*,
because they could never be brought to signify
their thoughts by any artificial signs.—*Ray, Wisdom
of God manifested in the Works of the Creation.*

These powers of *cógitation*, and volition, and sen-
sation, are neither inherent in matter as such, nor
acquirable to matter by any motion and modification
of it.—*Bentley.*

He seem'd, or fixt in *cógitation* deep.
Milton, Paradise Lost, iii. 628.

Cógitative. *adj.*

1. Having the power of thought and reflec-
tion.

If these powers of *cógitation*, volition, and sen-
sation, are neither inherent in matter as such, nor
acquirable to matter by any motion and modification
of it, it necessarily follows that they proceed from
some *cógitative* substance, some incorporeal inhabit-
ant within us, which we call spirit.—*Bentley.*

And though the philosophers have usually distin-
guished them into more, as into the common sense,
the phansie, both estimative and *cógitative*, yet
really and truly they are but one.—*Smith, Portrait
of Old Age*, p. 42.

ingham.*

Cógitativity. *s.* Capacity of thinking; apti-
tude for thought.

To make mere matter do all this is to change the
nature of it; to change death into life, incapacity of
thinking into *cógitativity*.—*Wollaston.* (Ord MS.)

Cógnac. *s.* Brandy so called from the name of
the place where it is made: (a proper rather
than a common name; and, in respect to
its use as a part of speech, an adjective
rather than a substantive).

The most celebrated of the French brandies, those
of Cognac and Armagnac . . . contain more than
one half of their weight of water, and come over
therefore highly charged with the fragrant essential
oil of the husk of the grape. . . If the best *cógnac*
brandy be carefully distilled at a low heat, and the
strong spirit be diluted with water, it will be found
to have suffered very much in its flavour.—*Ure,
Dictionary of Arts, Manufactures, and Mines*,
Brandy.

The Norwegian gentry seem to prefer it [potato
whisky] as a dram, when twice distilled, to *cógnac*
brandy.—*Laing, Residence in Norway*, ch. iii.

Cog-nate, -nize, -nominal. We have now
reached a section of derivatives from
three Latin roots; viz. the terms for
born, *know*, and *name*. These derivatives
agree in having the prefix *co-*, followed
not only by *g*, but by *g* and *n*; and
the case, though suggested, is not cov-
ered, by the remarks under *Co-*, *Con-*.

The power of the *g* is peculiar. The
ordinary Latin for *born*, *know*, and *name*,
is *natus*, *no-sco*, *nomen*, respectively; words
beginning with *n* without any *g*, and re-
quiring that the prefix should be *con-*, as
in *Connotation*.

Nevertheless, the *g* is no true part of the
prefix, except so far as it belongs to the
same syllable; what it is is a part of the
second element in its older and fuller form,
which was *g-natus*, *g-no-sco*, *g-nomen*, re-
spectively. How it became lost in the fun-
damental word, while it survived in the com-
pound, is easily seen. The combinations
gna- and *gno-*, are combinations which are
readily shortened into *na-* and *no-*, on ac-
count of *gn-*, in the same syllable, requiring
more care in the pronunciation than is
usually bestowed. Distribute them, how-
ever, between two syllables, and the sound
becomes easy, as *cog-na-*, *cog-no-*.

This is illustrated if we take, in our own
language, the words Gnat and Gnaw, and
suppose them, so long as they are simple
words, to be spelt phonetically (*nat* and
naw), whilst as *elements* in a compound
they are spelt etymologically, i.e. with the
g. The same applies to Knight, Knife, and
other words.

But the matter does not end here. Cog-
nizant is often, perhaps generally, pro-
nounced *connizant*. In French *gn* is always
pronounced more like *ny*, than simply like
g followed by *n*; and so it is in many other
languages; so much so that it is a rule of
considerable generality that *g* and *n* in con-
tact form an unstable combination. When
the *g* comes last it has a tendency to be-
come the *ng* in *song* or *king*; when it comes
first its affinities with *y* show themselves,
and that as follows: *g* either becomes *y*
and follows the *n* (*ny*), or the *n* becomes
what is called liquidized, and has a sound
like that of *ny*, but without being identical
with it; e.g. the Spanish *ñ*, and the French
ng. Neither of these sounds is English.
In pronouncing Cognizant, however, as
connizant, we have the same principle at
work.

To conclude: in the words under notice,
the prefix *co-* neither comports itself in
its usual manner before *g*, nor yet violates
the rules laid down under *Co-*, *Con-*.
These rules were *phonetic*. In the cases
before us, however, the combination is
etymological; and *g*, an element of the
root in its older, but strange to it in
its newer, form, is treated in the matter
of syllabification as if it belonged to the
prefix.

Cógnate. *adj.* [Lat. *cognatus* = akin to, re-
lated by blood.—see preceding remarks.]
Kindred; partaking of the same nature.

Which atoms are still hovering up and down, and
never rest till they meet with some pores propo-
rionable and *cógnate* to their figures, where they
acquire.—*Huvellet, Letters*, iv. 50.

Some neuter *cógnate* substantive.—*Johnson, Notes
Nottinghamshire*, p. 82.

Imbrute, I believe, is a word of Milton's coinage.
So was the *cógnate* compound 'imparadised' sup-
posed to be, till Bentley brought an instance from
Sidney's *Arcadia*.—*T. Warton, Notes on Milton's
smaller Poems.*

Cognition. *s.*

1. Kindred relationship; descent from the
same original.

Much moved hereto upon the account of his *cog-
nation* with the *Asacides* and kings of *Molossus*.—
Sir T. Browne, Miscellaneous Tracts, p. 159.

we took in death, so by our union with the body of
the second Adam we shall have the inheritance of
life.—*Jeremy Taylor, Rule and Exercises of Holy
Dying*, v. § 4.

Two vices I shall mention, as being of near *cogna-
tion* to ingratitude, pride, and hard-heartedness, or
want of compassion.—*South.*

Let the critics tell me what certain sense they
could put upon either of these four words, by their
mere *cognition* with each other.—*Watts, Improve-
ment of the Mind.*

2. Relation; participation of the same nature.

For as much as a priest is to have a *cognition* or
conjunction of nature with those for whom he is to
offer sacrifices.—*South, Sermons*, viii. 275.

He induceth us to ascribe effects unto causes of
no *cognition*.—*Sir T. Browne, Vulgar Errors*.

Cognition. *s.* Knowledge; complete convic-
tion.

I will not be myself nor have *cognition*
Of what I feel: I am all patience.

Shakespeare, Troilus and Cressida, v. 2.

God, as he created all things, so is he beyond and
in them all, not only in power, as under his subjec-
tion, or in his presence, as in his *cognition*; but in
their very essence, as in the soul of their casualties.
—*Sir T. Browne, Vulgar Errors*.

But the act of thought which every syllogism
attempts to represent, besides involving a *cognition*
of the particular coexistence predicated in the con-
clusion, involves also a *cognition* of those other co-
existences which form the data for that conclusion:
all of which coexistences may have long since ceased.
—*Herbert Spencer, Principles of Psychology*, p. 126.

Cógnitive. *adj.* Having the power of know-
ing.

Unless the understanding employ and exercise its
cognitive or apprehensive power about these terms,
there can be no actual apprehension of them.—*South,
Sermons.*

Thinking (employing that term as comprehending
all our *cognitive* energies) is of two kinds. It is
either (A) Negative or (B) Positive.—*Sir W. Hamil-
ton, Discussions on Philosophy and Literature*,
p. 578.

Cógnizable. *adj.* Liable to, or capable of,
cognition, judgement, or examination.

Some are merely of ecclesiastical cognition, others
of a mixed nature, such as are *cógnizable* both in the
ecclesiastical and secular courts.—*Ayliffe, Parergon
Juris Canonici*.

Cógnizance. *s.*

1. Judicial notice; trial; judicial authority.

It is worth the while, however, to consider how
we may discountenance and prevent those evils
which the law can take no *cógnizance* of.—*Sir R.
L'Estrange.*

The moral crime is completed, there are only cir-
cumstances wanting to work it up for the *cógni-
zance* of the law.—*Addison.*

2. Knowledge by recollection. *Obsolete.*

Who, soon as on that knight his eye did glance,
Eftsoones of him had perfect *cógnizance*.
Spenser, Faerie Queen, ii. 1. 31.

3. Cognition.

But what if light be but a sensation? and, whether
or no, how else have we any *cógnizance* of light?—
Ingleby, Introduction to Metaphysics, v. 9.

4. Badge by which anyone is known.

And at the king's going away the earl's servants
stood, in a seemly manner, in their livery coats,
with *cógnizances*, ranged on both sides, and made
the king a bow.—*Bacon, History of the Reign of
Henry VII.*

These were the proper *cógnizances* and coat arms
of the tribes.—*Sir T. Browne, Vulgar Errors*.

All believing persons, and all churches congreg-
ated in the name of Christ, washed in the same
laver of regeneration, eating of the same bread, and
drinking of the same cup, are united in the same
cógnizance, and so known to be the same church.—
Bishop Pearson, Exposition of the Creed, art. ix.

In gratitude of these benefits, the latter college
formerly used as their coat-of-arms, a crozier and a
pastoral staff piercing the head of a bear, the *cógni-
zance* of Richard of Gloucester.—*J. H. Jesse, Memoirs
of King Richard III.* ch. vi.

Cógnizant. *adj.* Having knowledge of any-
thing.

And here for a moment let us pause. We have
been gazing on the faint likenesses of many great
men. We have been traversing a Gallery, on either
side of which they stand ranged. . . *Cógnizant* of
its history, aware of the principles by which the
English chiefs are marshalled, sagacious of the
springs that move the politic wheel whose revolu-
tions we contemplate, it is an easy thing for us to

comprehend the phenomenon most remarkably presented by those figures and their arrangement. . . . But suppose some one from another hemisphere, or another world, admitted to the spectacle which we find so familiar, and consider what would be its first effect upon his mind.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Sir Samuel Romilly.*

Cognize. *v. a.* [see remarks under Cognate, -nize.] Take notice of anything.

As the reasoning faculty can deal with no facts until they are *cognized* by it—as until they are *cognized* by it they are to it non-existent—it follows that in being *cognized*, that is, in becoming beliefs, they begin to exist relatively to our reason. Whether really pre-existent or not, they can have no logical pre-existence; since the being perceived to exist is the being believed.—*Herbert Spencer, Principles of Psychology*, p. 15.

Cognóminal. *s.* One having the same name as some one else; namesake.

Nor do those animals more resemble the creatures on earth, than they on earth the constellations which pass under animal names in heaven; nor the dogfish at sea much more make out the dog of the land, than his *cognóminal* or namesake in the heavens.—*Sir T. Browne, Vulgar Errors.*

Cognóminal. *adj.* [Lat. *cognomen*, -inis = added name.—see remarks under Cognate, -nize.] Belonging to the surname.

The first of these two [names] is Pontius, the name descended to him from the original of his family—the second, Pilatus, as a *cognóminal* addition distinguishing from the rest descending from the same original.—*Bishop Pearson, Exposition of the Creed*, art. iv.

Cognómination. *s.* Name added from any accident or quality. *Rare.*

Pompey deserved the name Great: Alexander, of the same *cognómination*, was generalissimo of Greece.—*Sir T. Browne, Vulgar Errors.*

Cognosce. *v. n.* [Lat. *cognosco*.] Adjudicate. *Rare.*

God is naturally *cognóscible* by artificial means.—*Bishop Barlow, Remains*, p. 546.

The same that is said for the redundancy of matters intelligible and *cognóscible* in things natural, may be applied to things artificial.—*Sir M. Hale, Origination of Mankind*.

2. Subject to judicial notice.

When a witness is called before a judge, to give evidence upon oath concerning a third person, in a matter *cognóscible* by that jurisdiction, he is bound to swear in truth, in judgement, and in righteousness.—*Bishop Hall, Cases of Conscience*, D. ii. C. 5.

Here the mayor and magistrates of Gloucester did that which was no way warrantable by their charter, in which case they may be accountable, all or some: but in the high-commission we medled with no cause not *cognóscible* there.—*Archbishop Laud, Diary*, &c., i. 333.

In metaphysical writings this word is somewhat less common than it used to be; Knowable being preferred by such as aim at purity of English. The same writers, for the most part, use Thinkable instead of Cogitable. How far they have considered the expedience of separating the words from such derivatives as Cogitability and Cognóscibility is not apparent. It is to be hoped, however, that they may not, for the sake of being consistent, write *thinkability* and *knowability*.

Cognóscitive. *adj.* Having the power of knowing.

I suppose prescience to be an act of the understanding, (as likewise all science,) which alone is *cognóscitive*.—*Bishop Barlow, Remains*, p. 573.

Cohábit. *v. n.* [Lat. *cohabit*.]

2. Live together as husband and wife.

He knew her not to be his own wife, and yet had a design to *cohabit* with her as such.—*Fiddes, Sermons*.

Cohábitant. *s.* Inhabitant of the same place.

We receive fashions and conditions of our companions; and as diseases pass from one bodie to another by touching, even so doth the mind pour her infection into her neighbour. The drunkard leadeth his guests into drunkenness. Effeminate men and softlings cause the stout man to wax tender. Covetousness transferreth her poison into *cohabitants*.—*Bishop Woolton, Christian Manuell*, L. 6. b: 1576.

The oppressed Indians protest against that heaven where the Spaniards are to be their *cohabitants*.—*Dr. H. More, Decay of Christian Piety*.

Cohabitation. *s.*

2. State of living together as married persons.

Which defect, though it could not evacuate a marriage after *cohabitation*, and actual consummation, yet it was enough to make void a contract.—*Bacon, History of the Reign of Henry VII.*

But how the peace and perpetual *cohabitation* of marriage can be kept, how that benevolent and intimate communion of body can be held with one that must be hated with a most operative hatred, must be forsaken, and yet continually dwelt with and accompanied.—*Milton, Doctrine and Discipline of Divorce*.

Monsieur Brumars, at one hundred and two years, died for love of his wife, who was ninety-two at her death, after seventy years *cohabitation*.—*Tatler*, no. 56.

Cóherence. *s.* [Lat. *cohærentia*; from *hæreo* = stick, part. *hæsus*.]

1. State of bodies in which their parts are joined together, so that they resist divulsion and separation; connection; dependency; relation of parts or things one to another.

The pressure of the air will not explain, nor can be a cause of the *coherence* of the particles of air themselves.—*Locke*.

Why between sermons and faith should there be ordinarily that *coherence*, which causes have with their usual effects?—*Hooker*.

2. Consistency in reasoning, or relating, so that one part of the discourse does not destroy or contradict the rest.

Coherence of discourse, and a direct tendency of all the parts of it to the argument in hand, are most eminently to be found in him.—*Locke, Preface to St. Paul's Epistles*.

Cóhésion. *s.*

1. Act of sticking together.

Hard particles, heaped together, touch in a few points, and must be separable by less force than breaks a solid particle, whose parts touch in all the space between them, without any pores or interstices to weaken their *cohesion*.—*Sir I. Newton, Opticks*.

Solids and fluids differ in the degree of *cohesion*, which, being increased, turns a fluid into a solid.—*Arbutnot, On the Nature and Choice of Aliments*.

2. State of union or inseparability.

What cause of their *cohesion* can you find? What props support, what chains the fabric bind? *Sir R. Blackmore*.

3. Connection; dependence.

In their tender years, ideas that have no natural *cohesion* come to be united in their heads.—*Locke*.

The judges of the four circuits in Wales, although they are not of the first magnitude, nor need be of the degree of the *coif*, yet are they considerable.—*Bacon, Advice to Villiers.*

No less a man than a brother of the *coif* began his suit before he had been a twelvemonth at the Temple.—*Addison, Spectator.*

Instead of home-spun *coifs* were seen
Good pinners edg'd with *colbertine*.

Swift.
Serjeants at law . . . are called serjeants of the *coif* from the lawn *coif* they wear on their heads under their caps when they are created. The use of it was anciently to cover Tonsuram Clericalem, otherwise called Corona Clericalis, because the crown of the head was close-shaved, and a border of hair left round the lower part which made it look like a crown.—*Jacob, Law Dictionary*, in voce.

Coif. v. a. Dress with a coif.

She is clothed like a nun, *coifed* like a puppy, lame of one arm, crooked of one foot.—*Wadsworth, French Grammar*, p. 291: 1623.

I am pleased with the *coffure* now in fashion, and think it shows the good sense of the valuable part of the sex.—*Addison.*

Coigne, Coigny, or Cöynie. s. See first extract.

There is also such another statute or two, which makes *coigny* and livery to be treason. . . . I do not well know, but by ghesse, what you doe mean by these termes of *coigny* and livery. . . . I know not whether the words be English or Irish, but I suppose them to be rather ancient English, for the Irishmen can make no derivation of them. What livery is . . . we know, namely that it is an allowance of horsemeat. . . . So it is apparent, that, by the word livery is there meant horse meate, like as, by the word *coigny*, is understood man's meate; but whence the word is derived is hard to tell; some say of coine, for that they used commonly in their coignies, not only to take meate, but coine also; and that taking of money was specialle meant to be prohibited by that statute, but I thinke rather this word *coigny* is derived of the Irish. The which is a common use amongst land-lords of the Irish, to have a common spending upon their tenants; for all their tenants being commonly but tenants at will, they use to take of them what victuals they list; for of victuals they were wont to make small reckoning; neither in this was the tennant wronged, for it

was an ordinary and knowne custome, and his lord commonly used so to covenant with him, which if at any time the tennant disliked, hee might freely depart at pleasure.—*Spenser, View of the State of Ireland.*

Fitz Thomas of Desmond began that extortion of coigne and livery, and pay; that is, he and his army took horsemeat and man's meat, and money, at pleasure.—*Sir J. Davies, Discourse on the State of Ireland.*

I need not feare that any such unlawful exaction as *coynie* should be required at my hand.—*Bryskett, Discourse of Civil Life*, p. 187: 1606.

stone?—*Id., Coriolanus*, v. 4.

Lest from true goodness they thy steps entice,
And Pleasure *coil* thee in her dangerous snare.

Ev'n to the limit of the land.

Tennyson, Enoch Arden.

Coil. s. Rope gathered into a ring; anything resembling it.

When in a state of repose they usually dispose themselves in *coils*, with the head in the centre; and many are enabled to spring to a certain distance by the sudden unfolding of these *coils*.—*Maunder, Treasury of Natural History, Serpents.*

[*Coil*.—To *coil* a cable, to wind it round in the form of a ring, each fold of rope being called a coil. Portuguese *coiler hum cabo*, to coil a cable; *coiler*, Italian *coigliere*, Spanish *coger*, Latin *colligere*, to gather. In like manner Spanish *coger la ropa*, to fold linen. *Coil*.—Noise, disturbance. Gaelic *coileid*, a stir, movement, or noise; perhaps from *coil*, boiling, vapour, fume, battle, rage, fury; *goileam*, prating, vain tattle. The words signifying noise and disturbance are commonly taken from the agitation of water.—*Wedgwood, Dictionary of English Etymology*.]

Coil. s. [see preceding extract.] Tumult; turmoil; bustle; stir; hurry; confusion. *Obsolete.*

Who was so firm, so constant, that this coil
Would not infect his reason?

Shakespeare, Tempest, i. 2.

You, mistress, all this coil is 'love of you.

Id., Midsummer-Night's Dream, iii. 2.

When we have shuffled off this mortal coil,
Must give us pause.

Id., Hamlet, iii. 1.

yonder,

Cast from his mistress' favour; and such a coil

there is;

Can we be sure that this medal was really *coined*

by an artificer, or is but a product of the soil from whence it was taken?—*Bentley.*

2. Make or invent generally: (when applied to words, as is often the case, the notion

of stamping or authorizing them as current, like the coin of the realm, is suggested).

So shall my lungs

Coin words 'till their decay, against those measles,
Which we disdain should tetter us.

Shakespeare, Coriolanus, iii. 1.

In a bad sense.

Never *coin* a formal lye on't,

To make the knight o'ercome the giant.

Butler, Hudibras.

To sooth his sister, and delude her mind.

Dryden, Virgil's Æneid.

A term is *coined* to make the conveyance easy.—*Bishop Atterbury.*

Coinage. s.

1. Process of coining.

The care of the *coinage* was committed to the inferior magistrates; and I don't find that they had a publick trial as we solemnly practise in this country.—*Arbutnot, Tables of ancient Coins, Weights, and Measures.*

It was therefore manifest that the alteration of the standard and weight of the *coinage* is at once a crime, and a ruinous action for the sovereign power to commit; and hence such disastrous measures have been long abandoned in all well-regulated states. A gold sovereign is intrinsically worth twenty shillings, minus the cost of *coinage*; for were it worth more, all our sovereign pieces would be exported or melted down, to obtain the difference of value, however trifling it might be; and were it worth less, it would be the source of loss similar to what the state occasions when it depreciates the coin.—*Ure, Dictionary of Arts, Manufactures, and Mines, Mint.*

2. Thing coined.

This is conceived to be a *coinage* of some Jews, in derision of Christians, who first began that portrait.—*Sir T. Browne, Vulgar Errors.*

Is very cunning in. *Shakespeare, Hamlet*, iii. 4.

Coincidence. s. Coincidence.

These be the eight kinds of St. Barnard's unity; wherein I will not censure either any impropriety, or any *coincidence*; because they may all well pass for several kinds of unity in the popular capacity.—*Fotherby, Atheomastix*, p. 303.

Coincident. adj.

1. Falling upon the same point.

These circles I viewed through a prism; and as I went from them, they came nearer and nearer together, and at length became *coincident*.—*Sir I. Newton, Opticks.*

Christianity teaches nothing but what is perfectly suitable to and *coincident* with the ruling principles of a virtuous and well inclined man.—*South.*

These words of our apostle are exactly *coincident* with that controverted passage in his discourse to the Athenians.—*Bentley.*

Coiner. s.

1. Maker of money; minter; stamper of coin: (taken alone it generally suggests the notion of bad money).

We can recognize changes as connatural; or the reverse; and connatural changes we can recognize as *cointense*; or the reverse.—*Herbert Spencer, Principles of Psychology*, p. 295.

Cointension. s. [see extract.] Condition of equal intensity, intenseness, or intensity in two objects.

Thus far we have dealt with reasoning which has for its fundamental ideas, coextension, coexistence, and connature; and which proceeds by establishing *cointension* in degree, between relations connate in kind. . . . The words *Tense*, *Tension*, *intense*, *intension*, are already in use. *Intension* being synonymous with *intensity*, *cointension* will be synonymous with *cointensity*; and is here used instead of it to express the parallelism with *coextension*. The propriety of calling relations more or less intense, according to the contrast between their terms, will perhaps not be at first sight apparent. All quantitative relations, however, save those of equality, involving the idea of contrast—the relation of 5:1 being called greater than the relation of 2:1, because the contrast between 5 and 1 is greater than the contrast between 2 and 1—and contrast being habitually spoken of as strong or weak; as forcible, as intense; the word *intension* seems the only available one to express the degree of any relation as distinguished from its kind. And *cointension* is consequently here chosen, to indicate the equality of relations in respect of the contrast between their terms.—*Herbert Spencer, Principles of Psychology*, p. 117.

Cointensity. s. See *Cointension*.

Coir. s. [see first extract.] Coconut fibre for ropes or matting.

In pits by the roadside the husks of the nut are steeped to convert the fibre into *coir*. . . . The term *coir* is a corruption of the Maldivé term *kambar*. . . . COLB

Coiting. s. Same as *Quoiting*.

Coition. s. [*Lat. coitio, -onis*.]

Obsolete.

By Gilbertus this motion is termed *coitio*, not made by any faculty attractive of one, but a syndrome and concourse of each.—*Sir T. Browne, Vulgar Errors*.

Côking. s.

1. Process by which *coke* is made.

The *côking* of small coal is performed upon vaulted hearths, somewhat like *beehives* ovens, but with still flatter roofs. Of such kilns, several are placed alongside one another, each being an ellipse deviating little from a circle, so that the mouth may project but a small space. The dimensions are such, that from ten to twelve cubic feet of coal-culm may be spread in a layer six inches deep upon the sole of the furnace.—*Ure, Dictionary of Arts, Manufactures, and Mines, Pitcoal*.

Used adjectively.

A neighbour of the above *côking* ovens, having lately indicted them as a nuisance, procured, secundum artem, a parcel of affidavits from sundry chemical and medical men. Two of the former, who had not entered the premises, but had espied the outside of the furnace's range at some distance, declared that 'the *côking* process, as performed at the ovens, is a species of distillation of coal!' How rashly do unpractical theorists affirm what is utterly unfounded, and mislead an unsentient judge!—*Ure, Dictionary of Arts, Manufactures, and Mines, Pitcoal*.

2. Process by which wood is converted into charcoal.

Colchicum. s. [see extract.—by some who aim at classical purity this word is sounded *kôlkikum*; the pronunciation supplying an opportunity for quoting Horace—

ille venena Colchic-a [or Colcha],

Et quicquid usquam concipitur nefas, &c.:

those, however, who prescribe, and those who sell it, say *koltshikum*.] Native medicinal plant so called, i.e. *Colchicum autumnale*, Autumnal Crocus, or Naked Ladies; seeds and underground stem (*corinus*) of the same; wine made therefrom.

Dioscorides speaks of *Colchicum* (κόλχικον), and says it grows in Messenia and at *Colchis*. From the latter place it received its name. Dr. Sibthorpe found three species of *Colchicum* in Greece, viz. *C. autumnale*, *C. montanum*, and *C. variegatum*. The first of these he considers to be the *Colchicum* of Dioscorides. It is the species admitted into the *Pharmacopœia Græca*, printed at Athens in 1837. . . . The existence in *Colchicum* seeds of a new principle called *colchicina*, *colchica*, and *colchicine*, has been announced by Geiger and Hesse. . . . *Colchicina* is a powerful poison.—*Perreira, Elements of Materia Medica and Therapeutics*.

Colcothar. s. [?] See extracts.

Colcothar, or vitriol burnt, though unto a redness, containing the fixed salt, will make good ink.—*Sir T. Browne*.

Colcothar of vitriol is the brown-red peroxide of iron, produced by calcining sulphate of iron with a strong heat, levigating the resulting mass, and elutriating it into an impalpable powder.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Cold. adj. [*Mesogothic, kalds*.]

The aggregated soil

We should not, when the blood was cold, have
threat'ned
Our prisoners with the sword.
Shakespeare, Cymbeline, v. 5.

Cold. s.

1. Opposite of heat; coldness; sensation of cold; chilliness.

Heat and cold are nature's two hands, whereby she chiefly worketh: and heat we have in readiness, in respect of the fire; but for cold we must stay till it cometh, or seek it in deep caves, or high mountains; and when all is done, we cannot obtain it in any great degree.—*Bacon, Natural and Experimental History.*

The sun
Had first his precept so to move, so shine,
As might affect the earth with cold and heat
Scarce tolerable, and from the north to call
Decrepid winter, from the south to bring
Solstitial summer's heat.

He relates the excessive coldness of the water they met with in summer in that icy region, where they were forced to winter.—*Boyle, Experiments.*

Form, order, beauty through the universe;
While dryness moisture, coldness heat resists,
All that we have, and that we are subsists.

Sir J. Denham.

2. Uneoncarn, frigidity of temper; want of zeal; negligence; disregard.

Divisions of religion are not only the farthest spread, because in religion all men presume themselves interested; but they are also, for the most part, hotter prosecuted: for as much as coldness, which, in other contentions, may be thought to proceed from moderation, is not in these so favourably construed.—*Hooker, Ecclesiastical Polity, dedication.*

Secure in guarded coldness, he had mix'd
Again in fancied safety with his kind,
And deem'd his spirit now so firmly fix'd,
And shaght'd with an invulnerable mind.
Byron, Child Harold's Pilgrimage, iii. 10.

3. Coyness; want of kindness; want of passion.

Unhappy youth! how will thy coldness raise
Tempests and storms in his afflicted bosom.

Absolute with coldness, or with spite accuse. *Prior.*

4. As opposed to hotness = acidity. See Hot.

Cole. s.

Plant of the cabbage kind in general. See Kail. (It forms the first element in Coleseed and Colewort; the former, however, may be the seed of a turnip.)

Coleóptera. s.

[Gr. κόλεος = sheath, πτερον = wing.] In Zoology. Class of insects, the wings of which are covered with a sheath (elytron), represented by the beetles. (The word has several derivatives.)

Those hexapod insects which are devoid of wings are called Aptera; those with two wings only are the Diptera. All the rest have four wings. The Lepidoptera have four scaly wings; the Hymenoptera have four veined wings, crossing each other when at rest; the Hemiptera have one pair of wings partially thickened, and called hemelytra; the Orthoptera have one pair of wings wholly thickened, the other folded lengthwise; the Coleoptera have one pair wholly and much thickened, called elytra, and the other pair folded crosswise; the Neuroptera have four reticulated wings; the Strepsiptera have one pair of wings rudimental and curled up. In the Aphaniptera both pairs are rudimental.—*Owen, Lectures on Comparative Anatomy, lect. xvi.*

Coleseed. s.

She cull'd, and then with handy care she dress'd.

Dryden.

How turnips hide their swelling heads below,
And how the closing coleworts upwards grow. *Gay.*

Cólic. s.

[Fr. *colique*.] Disease so called, consisting in a painful spasmodic contraction of the bowels (in its most violent form the peristaltic action is inverted); gripes, or the gripes; in Medicine, ileus (from the *ileum*, a portion of the small intestines, though the *colon*, from which the word is ultimately derived, belongs to the large: there is probably some confusion with κόλη = bile).

It strictly is a disorder of the colon; but loosely, any disorder of the stomach or bowels that is attended with pain. There are four sorts: 1. A bilious colic, which proceeds from an abundance of acrimony or choleric irritating the bowels, so as to occa-

sion continual gripes, and generally with a looseness; and this is the best managed with lenitives and emollients. 2. A flatulent colic, which is pain in the bowels from flatules and wind, which distend them into unequal and unnatural capacities; and this is managed with carminatives and moderate openers. 3. An hysterical colic, which arises from disorders of the womb, and is communicated by consent of parts to the bowels; and is to be treated with the ordinary hystericks. 4. A nervous colic, which is from convulsive spasms and contortions of the guts themselves, from some disorders of the spirits or nervous fluid, in their component fibres; whereby their capacities are in many places streightened, and sometimes so as to occasion obstinate obstructions: this is best remedied by brisk catharticks, joined with opiates and emollient diluters. There is also a species of this distemper which is commonly called the stone colic, by consent of parts, from the irritation of the stone or gravel in the bladder or kidneys; and this is most commonly to be treated by nephreticks and oily diureticks, and is greatly assisted with the carminative turpentine clysters.—*Quincy.*

In the plural; i.e. equivalent to gripes in number as well as sense.

Colicks of infants proceed from acidity and the air in the aliment expanding itself, while the aliment ferments.—*Arbuthnot, On the Nature and Choice of Aliments.*

Colicky. adj.

Of the nature of colic (as in 'colicky pains'); cholick (this latter has been the commoner adjectival form in Medicine since the final *k* was dropped from the substantive, as *colicy* would run the chance of having the second *c* sounded as *s*).

Coll. v. a.

[see Colling.] Embrace round the neck. *Rare.*

So having said, her twist her arm's twaine

She straightly strain'd, and coll'd tenderly.

Colláps. s.

In Medicine. General prostration of the vital powers (as 'in a state of collapse'); applied also to the failure of such schemes and companies as might be compared to bubbles.

Collápsed. part. adj.

Withered; ruined; fallen down.

What else do our papists, but by keeping the people in ignorance, vent and broach all their new ceremonies and traditions, when they conceal the Scripture, read it in Latine, and to some few alone, feeding the slavish people in the mean time with tales out of legends, and such like fabulous narrations? Whom do they begin with but collapsed ladies, some few tradesmen, superstitious old folks, illiterate persons, weak women, &c.—*Burton, Anatomy of Melancholy, p. 655.*

Let the boiling pleasures of the rebellious flesh evaporate a little, and let the drain my boggy soul from those corrupted inbred humours of collapsed nature.—*Quarles, Judgment and Mercy, The Procrastinator.*

And collars of the same their necks surround.

Catch hold of him, not only by anything round his neck, but by the neck itself; the anatomical sense of the word being shown in Collar-bone.**Against the collar.** At a disadvantage, or against the inclination: (referring to the strain on the horse's collar in pulling uphill).**In collar and Out of collar** (applying to the collar of a horse). Of labour, that did from his liking baulk,
He would have *slipped the collar* handsomely.

Collar of brawn. Quantity made from one hog, or bound up in one parcel.

There is history in words as well as etymology. Thus brawn, being made of the collar or breast part of the boar, is termed a *collar of brawn*. The brawn or boar begets collar; which being rolled up, conveys the idea to anything else; and eel, so dressed, takes the name of *collared eel*; as does also *collared beef*, &c. So that everything rolled bears the name and arms of collar.—*Pegge, Anecdotes of the English Language*.

Combustibility. *s.* Attribute suggested by Combustible; liability to catch fire; capability of being burnt.

As the opposite to Combustible, viz. *In-combustible*, is in common use, the form before us is preferable to the abstract in *-ness*; which would give the awkward form *un-combustibleness*; not to mention the English origin of the termination *-ness*, as contrasted with the Latin origin of the adjective to which it is attached).

2. In *Chemistry*. Evolution of heat arising from the combination of a substance capable of combustion (*combustible*) with a substance capable of supporting the same (supporter of combustion). This heat need by no means be accompanied by light, or be in any way sensible to the ordinary tests; the rust of iron being as true an instance of combustion (in the general sense given to it in *Chemistry*) as the flame of a candle. See extracts.

The combinations of oxygen, like those of all other bodies, are attended with the evolution of heat. This result, which is often overlooked in other combinations, . . . assumes an unusual importance in the combinations of oxygen. The economical applications of the light and heat evolved in these combinations are of the highest consequence and value, and oxidation alone of all chemical actions is practised, not for the value of the products it affords . . . but for the sake of the incidental phenomena attending it. . . . When a body combines with oxygen, it is said to be burned, and, instead of undergoing oxidation, is said to suffer *combustion*; and a body which can combine with oxygen and emit heat is termed a *combustible*. Oxygen in which the body burns is then said to support *combustion*, and is called a supporter of *combustion*.—*Graham, Elements of Chemistry*, p. 250.

Come. *v. n.* preterite, *came*; participle, *come*, the older form *comen*. [A.S. *coman*.]

As a verb, i.e. as a word implying a state or an action, *Come* simply denotes motion—motion, however, of a peculiar kind.

This is best understood by comparing or contrasting it with its opposite and correlative *Go*.

The motion denoted by *Go* is *from*, the motion denoted by *Come* is *to*, the speaker. Hence, the additional or *ad-verbal* idea involved in the term is pronominal rather than adjectival; e.g. if we explain *Hurry* as *move hastily*, the motion expressed by *hasty* is adjectival, and is founded on the Substantive *haste*; whereas, if we explain *Come* to mean *move this way*, the secondary element, though connected with the Adverbs *hither* or *here*, is ultimately founded on the Pronoun *he* or its root; which, though usually treated as Personal, is, originally, Demonstrative.

This is because the idea suggested is not that of a simple quality, but that of a relation; a relation which in many respects may be compared with the ones denoted by *this* and *that*, *here* and *there*.

It is not easy, in all cases, to determine whether the word be properly used. Where A, standing on a certain spot, says that B is expected to present himself on that spot, the word *Come*, i.e. *move in a direction to the speaker*, is the natural and appropriate term; the speaker's position being beyond doubt. But what if he has to say that B will meet him at some third place, or one different from that on which he is speaking? In such a case the movement towards A is only partial, and is complicated by the idea of movement from his (A's) own position. If this predominate, so that the spot left by B take a more prominent place in the conception than the spot the speaker leaves, the use of *Go* suggests itself.

This is shown in the following extracts (all of which are Johnson's), in the second division of which *go* may be substituted for *come*.

a) *Come*, alone the appropriate term.

Cæsar will come forth to-day. (Shakespeare, Julius Cæsar, ii. 1.)

Here both the speaker and the person spoken to are waiting to see Cæsar, and that on a spot which he will approach.

COME

{ COMBUST
COMES

The next—

Coming to look on you, thinking you dead, I spake unto the crown as having sense. (Shakespeare, Henry IV. Part II. iv. 4.)—

is also uttered on the spot where the speech to the crown was made, and where the wearer of it was addressed.

By the pricking of my thumbs, Something wicked this way comes. (Shakespeare, Macbeth, iv. 1.)

b) *Come*, capable of being superseded by *go*.

It is impossible to *come* near your lordship at any time, without receiving some favour. (Congreve, Dedication to the Old Bachelor.)

In the following the greater propriety of *go* is evident: the natural combination being *Come* and *my*, *Go* and *your*.

Look to 't, I charge you; *come your ways*. (Shakespeare, Hamlet, i. 3.)

Another point connected with *Come*, in which it agrees with *Go*, is its thoroughly neuter or intransitive character. Without wholly changing its meaning, it cannot become active or transitive.

Few verbs, however, at first sight oftener appear to govern a noun. This is because such expressions as 'come this way,' 'he went three miles,' and the like are common. The government, however, is only apparent. No action expressed by the verb *Come* affects the noun as an object.

Its true construction is *adverbial*: i.e. the noun (generally in conjunction with some other word) shows the manner in which the action is performed, but by no means expresses anything that the action affects. The same construction is common in other languages where an accusative case, after an intransitive verb, takes the guise of a case in a state of government. The accusative which in Latin expresses duration of time is an instance. From this point of view, nouns conveying the notion of direction or distance are those that most frequently follow *Come*; and, next to these, the pronoun *it* in its indefinite, or indeterminate, sense. Such expressions as 'to come it,' 'to go it,' 'to come it strong,' although always *colloquial*, and often vulgar, are strictly idiomatic. See *It* indefinite and postpositive.

Come. v. n. Sprout.

The close affinity of the notion of sprouting like a seed and approaching the surface of the earth makes it difficult to say where the senses connected with the German *heim*, and the senses connected with the A.S. *cuman*, run into one another. In the first of the following extracts the sense was probably *sprout*, and the pronunciation *coam*; in the remainder *come* is the ordinary verb. In the present language the sense of *sprout* is wholly lost; so that to *come up* is simply to *rise* or *ascend*.

It is reported that if you lay a good stock of kernels of grapes about the roof of a vine, it will make the vine come earlier and prosper better.—*Bacon, Natural and Experimental History.*

Come. v. n. For *Become*, in the sense of happen; fall out; take place.

The remarks under the preceding entry, *mutatis mutandis*, apply here. It is difficult to say where the word *Come* has its ordinary power and translates the Latin *evenit*, or where it = *become* and translates the Latin *fit*.

So came I a widow,
And never shall have length of life enough
To rain upon remembrance with mine eyes.

finement and retiredness. Is it a small benefit that I am placed there, where no oaths, no blasphemies beat my ears? where my eyes are in no peril of wounding objects? where I hear no invectives, no false doctrines, no sermocinations of ironmongers, feltmakers, cobblers, broom-men, grooms, or any other of those inspired ignorants? no curses, no ribaldries? where I see no drunken comessations, no rebellious routs, no violent oppressions, no obscene rejoicings, nor aught else that may either vex or affright my soul? This, this is my liberty, who whiles I sit here quietly locked up by my keeper, can pity the turmoils and distempers abroad, and bless my own immunity from those too common evils.—*Bishop Hall, Free Prisoner, Works*, iii. 489.

He . . . has laid down three axioms, which he deems sufficient to solve all the intricacies of the subject. . . . The third is, that the rulers of every empire from *comity* admit, that the laws of every people, in force within its own limits, ought to have the same force everywhere, so far as they do not prejudice the powers and rights of other governments, or of their citizens. . . . It has been thought by some jurists that the term *comity* is not sufficiently expressive of the obligation of nations to give effect to foreign laws when they are not prejudicial to their own rights and interests. And it has been suggested that the doctrine rests on a deeper foundation; and it is not so much a matter of *comity* or courtesy as a matter of paramount moral duty. Now, assuming that such a moral duty does exist, it is clearly one of imperfect obligation, like that of beneficence, humanity, and charity.—*Story, Conflict of Laws, § 28-33.*

The income of the order consisted... of landed property in almost every province in Europe... During the first years... they were farmed out to members of the laity entirely unconnected with the institution... This system, however, was found to be extremely faulty in the working... In order to guard against this evil, it was determined to place over each of them a member of the order who should act as a steward of the funds committed to his control... These establishments formed at the same time branches... On the first creation of these [branch] establishments, they were denominated Preceptories; the superior being called the preceptor; but eventually the name became changed to that of *commandery*, by which they were always afterwards known. The council reserved to themselves the power of at any time recalling a *commander* from his post, and substituting another in his place, at their pleasure; he being merely considered as the steward of their property. Time, however, gradually wrought a great change in the relative position which the *commanders* held to the council; and, eventually, a nomination to a *commandery* came to be considered in the light of a legal acquisition, subject only to the payment of a certain amount of annual tribute to the public treasury, which tribute received the name of Responsions.—*Major Porter, History of the Knights of Malta*, vol. i. ch. ii.

In the common construction with the reflective pronoun, as in such phrases as 'He has committed himself' (to which he is committed is an equivalent expression) to a certain principle or line of conduct, the fundamental sense of the verb is that which it has in the first series of examples; the person spoken of having intrusted himself to something. By omitting to name the specific object to which this committal is made, we get a general expression for doing something that involves risk; and as, in all risks, the dangerous element preponderates, the sense of such expressions as 'he has committed himself' is disparaging, being that he has done something by which he has either lost, or is likely to lose, reputation.

Montgomery, a Sheffield poet, being also an evangelical, is tolerably well known in London, and may

in some companies be slightly mentioned without committing the speaker. *Miss Aikin, To Dr. Channing*: 1830.

Common. adj. [Lat. *communis*.]

1. Belonging equally to more than one.

Though life and sense be *common* to man and brutes, and their operations in many things alike; yet by this form he lives the life of a man, and not of a brute, and hath the sense of a man, and not of a brute.—*Sir M. Hale, Origination of Mankind.*

Neither is it strange that there should be mysteries in divinity, as well as in the *commonest* operations in nature.—*Swift.*

5. With sense. Spontaneous or natural

judgement of the world at large (which, as such, is general or approximately universal), as opposed to judgements founded on refined inferences. In such expressions as 'the *common-sense* philosophy,' and 'common-sense view,' the combination is treated as a single term.

Many who allow the use of systematic principles in other things are accustomed to cry up *common-sense* as the sufficient and only safe guide in reasoning. Now by *common-sense* is meant, I apprehend, (when the term is used with any distinct meaning,) an exercise of the judgment unaided by any art or system of rules: such an exercise as we must necessarily employ in numberless cases of daily occurrence; in which, having no established principles to guide us,—no line of procedure, as it were, distinctly chalked out,—we must needs act on the best extemporaneous conjectures we can form. He who is eminently skillful in doing this, is said to possess a superior degree of *common-sense*. But that *common-sense* is only our second-best guide—that the rules of art, if judiciously framed, are always desirable when they can be had, is an assertion, for the truth of which I may appeal to the testimony of mankind in general; which is so much the more valuable, inasmuch as it may be accounted the testimony of adversaries. For the generality have a strong predilection in favour of *common-sense*, except in those points in which they, respectively,

possess the knowledge of a system of rules; but in these points they deride any one who trusts to unaided common-sense. A sailor, e.g., will perhaps despise the pretensions of medical men, and prefer treating a disease by common-sense; but he would ridicule the proposal of navigating a ship by common-sense, without regard to the maxims of nautical art. . . . And the induction might be extended to every department of practice. Since, therefore, each gives the preference to unassisted common-sense only in those cases where he himself has nothing else to trust to, and invariably resorts to the rules of art, wherever he possesses the knowledge of them, it is plain that mankind universally bear their testimony, though unconsciously and often unwillingly, to the preferableness of systematic knowledge to conjectural judgments.—*Whately, Elements of Logic*, pref.

6. Vulgar; mean; not distinguished by any excellence; often seen; easy to be had; of little value; not rare; not scarce.

Or as the man whom princes do advance
Upon their gracious mercy-seat to sit,
Doth common things, of course and circumstance,
To the reports of common men commit.

Sir J. Davies.

7. Of no rank; mean; without birth or descent.

Look, as I blow this feather from my face,
And as the air blows it to me again,
Such is the lightness of you common men.

Shakespeare, Henry VI. Part III. iii. 1.

Flying bullets now,
To execute his rage, appear too slow;
They miss or sweep but common souls away,
For such a loss Opdam his life must pay.

8. Applied to a woman it has a bad sense, the combination denoting a prostitute.

'Tis a strange thing, the impudence of some women!
I was the word of a dame, who herself was common.—*Sir R. L'Estrange.*

Hipparchus was going to marry a common woman, but consulted Philander upon the occasion.—*Spectator*, no. 475.

9. In *Logic*. Applied to terms, or names, in opposition to individual, Singular, or Proper.

Common-terms, therefore, are called 'predicables,' (viz. affirmatively-predicable,) from their capability of being affirmed of others: a singular-term, on the contrary, may be the subject of a proposition, but never the predicate, unless it be of a negative proposition; (as, e.g., the first-born of Isaac was not Jacob); or, unless the subject and predicate be only two expressions for the same individual object; as in some of the above instances.—*Whately, Elements of Logic*, b. i. § 6.

10. In *Grammar*. Applied, according to Johnson,

- a. To Verbs; his words being:

*Such verbs as signify both action and passion are called common, as *aspersion*, *I despise*, or *am despised*.

This power, if not originally rare and exceptional, is now obsolete; its usual application being

- b. To Nouns, i.e. to such as are either Masculine or Feminine as the case may be.

With words of this kind, the object to which they apply must be either male or female in the way of sex, whilst, in the way of grammar, its inflection must be indifferent: i.e. it must not be declined in a manner either exclusively masculine or exclusively feminine.

When combined with an Adjective or a Pronoun, and that in a language where the parts of speech have a well-marked distinction of gender, the common character of the Substantive is very apparent. This is the case in Latin, where *hic parens* denotes the father, *hec parens* the mother. The propriety, however, of the term is limited to the singular number. With *parentes* = parents, combined with an Adjective, though the objects denoted are of two sexes, the Adjective (or Pronoun) which applies to them has, from the nature of the case, only one form.

This shows that the meaning of the word Common is logical, rather than formal; and that it applies to the object rather than to the name. Neither in Pronouns nor in

Adjectives is there any such thing as a common infection; i.e. a series of terminations separate from those of the Masculine, Feminine, and Neuter genders. That there is nothing of the kind in Substantives has been already stated.

Hence, the word under notice, as applied to gender, has been objected to, even as a term in the Latin language. In our own the objections to it are stronger. In English, words like *he* and *she* supply the only combinations in which there is a concord of gender at all: as, '*He* is a parent,' when speaking of a father; '*She* is a parent,' when speaking of a mother.

The term, however, is useful in general grammar; the cases to which it is restricted being those where there is one form for the Neuter and another for the Masculine and Feminine taken together; one form (roughly speaking) for things, and one for persons. Such is the case in the Danish and Swedish, where the words for husband and wife are of the same gender; this gender being one out of two, the other being a decided Neuter.

Even in English we have a true instance of a common gender in the word *who*, applied to men and women indifferently, as opposed to *what*, restricted to things; and which, along with *that* and *it*, is the only true neuter in our language.

Out of the common. Uncommon; extraordinary; generally suggesting approbation, i.e. difference in the way of excellence rather than defect. The use of the article the suggests that the construction is that of a substantive. It is probable, however, that the phrase is short for '*out of the common run or order*.'

Common. s. Anything pertaining to land (as the right of pasturage, fishing, turbary, or forest), equally and prescriptively enjoyed by many persons; especially, a piece of open ground so used.

Like to the empty ass, to shake his ears,
And graze in commons.

Shakespeare, Julius Caesar, iv. 1.

Is not the separate property of a thing the great cause of its endearment? Does any one respect a common as much as he does his garden?—*South.*

In the following phrases the construction is that of a substantive governed by a preposition, the result being a combination which is equivalent in sense to an adverb, though not itself adverbial in the way of grammar.

In common.

- a. Equally to be participated by a certain number.

By making an explicit consent of every commoner necessary to any one's appropriating to himself any part of what is given in common, children or servants could not cut the meat which their father or master had provided for them in common, without assigning to every one his peculiar part.—*Locke.*

Commoncouncilman. s. Member of the court of common-council: (the logical division of the elements in this word is *commoncouncil-man*, though the usual pronunciation is *common-councilman*. See *Commonplacebook*).

it down by way of common-place.—*Swift, On the

tablished or elicited, and therefore the most trite
and common-place examples were in fact the best.—*Coleridge, Table Talk.*

Communicate. *v. n.*

1. Have something in common with an-
other; join (i.e. have common points of
contact); take, or give, a share in any-
thing.

I cannot see reason enough to say that if any man
sins by the using of these arts and their produc-

others, may possibly not communicate in their sin

Communication, another secondary trope, takes
place when a speaker or writer assumes his hearer
or reader as a partner in his sentiments and dis-
course, saying *We*, instead of *I* or *Ye*. This trope
may be a sign of the writer's or speaker's modesty,
and of the respect he bears to his readers or hearers.
As this trope puts many for one, it may be con-
sidered as a sort of synecdoche.—*Beattie, Elements of*
Moral Science, § 865. (Ord MS.)

That which I am to blame in you, is, that your

is required in such.—*Hammond, Paraphrase and*

Communism. *s.* System of things in com-
mon; doctrines relating to it. (Applicable
to any question concerning possession and
distribution of property, it generally has a
special meaning according to the time and
country in which it is used. At present,
its most important application is in Russia,
where it touches the relation of the serf
stricted to the soil (*astriktus glebæ*), and
the soil to which he is astricted, engender-
ing the doctrine that, as 'the serf belongs
to the land, the land belongs to the serf';
and this just now is probably its ordinary
meaning, where nothing else suggests the
contrary.)

In this state of things, however, the Slavonophiles
of Poland ought to indulge no more in their empty
boast that their country escaped the feudal system.
At least, under the feudal system peasants easily
became proprietors; and if the feudal system, with
its variety of tenures, and its numerous social gra-
dations, had existed in Poland, it would not be so
easy as it is now to divide the country into two great
classes, and to paralyze all national action by rais-
ing up the lower, in the name of communism, against
the upper, whenever it may venture to move in the
name of patriotism.—*S. Edwards, The Polish Capti-
vity, vol. i. ch. x.*

Communist. *s.* One who maintains the doc-

Communitistic. adj. Pertaining to community.

Competible. adj. [In most cases *Competible* and *Compatible* may be looked on as separate words; the one from the root *pet-*, in *pet-o* = seek; the other from the root *pat-*, in *pat-i-or* = suffer.

On the other hand, the ideas conveyed by the two roots are allied, inasmuch as two persons seeking the same thing, when actively employed, are much in the same category as two persons influenced by the same desire of seeking. In things, the tendency to confusion is stronger; and, whatever may be the case with accurate writers, it is beyond doubt that *compatible* is often used for *competible*, when applied to objects. And this reasonably, inasmuch as the object looked on as a thing sought (or *competible*) is, at the same time, an object which causes the search; in which the searchers are, so far as they are acted on by it as a stimulus, recipients of the same, and, as such, more or less passive. 'The two things are not *compatible*' may be translated 'the two things are not to be sought at the same time (*competible*);' but it may also mean, 'the two things are not tolerable, endurable, or admissible (*compatible*) together.' In the negative, *incompatible*, the fusion of the two meanings is equally clear.

The use of *competible* for *compatible* is not so common.

Hence, the fact which presents itself in so many other words presents itself here. There are several meanings of both *competible* and *compatible*, which can clearly be separated from each other. At the same time there are several instances where there is an actual confusion between the two words, especially when we test them by the etymological question as to whether it is *pet-* or *pat-* that they come from.]

Complement. s. [see Complete.] Complement and Compliment, the one with the e, and the other with the i, are the same words; in respect, at least, to their etymology.

Of the two *Complement* is the better form. Both come from *pleo* = fill, of which the participle and the other secondary forms are in e, as *completus, completio*.

The import of both the elements, the *cum* indicating conjunction, and the *pleo* indicating fulfillment, is that some integral, or unit, is made full, or *complete*, in the sum of its constituent parts.

These are looked on as *two*; *two* and no more. What is not expressed on the one side must be made up on the other.

This makes the word *difference* in Arithmetic a good illustration. If 10 is the integer, 7 and 3 are complements to each other. One or the other makes up the difference between the number given as a part of a whole and the whole, or sum total, itself.

But in every object of thought which can be divided into two, this same difference presents itself, and in many sciences the word *complement* is technically used instead of *difference*.

In Optics, where a third colour added to two others makes white, that third colour is the *complementary* one. See *Complementary*.

In Logic, the word *universe* has the same import as *sum* or *total* in Arithmetic, meaning the whole class of objects under consideration as elements of a class; of which those under definite notice are one part, while the indefinite remainder is the *complement*.

And so it is in other departments of enquiry. The derivatives *Complemental* and *Complementary* follow the same rule. They all indicate the difference between that which is expressly named and the unnamed remainder.

So much for the genuine form in *e*. The form in *i*, logically, is much the same, though its application is to a wholly different range of subject matter. When we send our *compliments* to anyone, we give the difference between what is definitely expressed and the indefinite remainder, which, to be worth alluding to at all, is necessarily of the nature of a civility. Hence *compliments* are a civil sort of *et cetera*; and, as such, *complementary*. The somewhat less usual equivalent of 'say all that is necessary,' illustrates this. So does, though more remotely, 'make it up,' or 'make up the difference;' though this, in many cases, lies nearer to another explanation.

This applies to *my compliments*, &c., when the substantive is plural; the essence of which is its indefinitude, an indefinitude which is contrasted with what is said or done definitely, while at the same time it shows that what is said or done is not all.

In the singular number this particular sort of indefinitude disappears, but only to be superseded by an indefinitude of another kind. As a general rule, a *compliment* means something which, though very definite as a fact, is never supposed to be definite as to its motive (as sincere or insincere), or its value (as true or false), or its object (as strictly honest, or the contrary); herein, i.e. in the silence as to its details and bearing, lying its indefinitude. A *bribe*, than which nothing as a fact is more definite, is just the thing that is spoken about most indefinitely; and there is no euphemism which is commoner than *compliment* for *bribe* or something like it.

Such is the connection between two words of the same origin, the same sound, and, within one vowel, the same spelling, one of which may mean some *particular colour*, and the other a *civil saying*, a *formal call*, or a *bribe*.

With a result so similar, and a meaning so different, it is probable that the difference in spelling is one which was intentionally adopted for the sake of expressing the difference, i.e. on the grammatical principle of *ob differentiam*. But on this point it is unsafe to speak decidedly. All that can be said is that *Complement* is often spelt *Complément*; *Complement* being less frequently spelt *Compliment*.

Conceivable. *adj.* Capable of being imagined or thought.

If it were possible to contrive an invention, whereby any *conceivable* weight may be moved by any *conceivable* power with the same quickness, without other instrument, the works of nature would be too much subjected to art.—*Bishop Wilkins.*

The freezing of the words in the air in the northern climes, is as *conceivable* as this strange union.—*Glanville, Scepis Scientifica.*

It is not *conceivable* that it should be indeed that very person, whose shape and voice it assumed.—*Bishop Atterbury, Sermons.*

Probabilities, we apprehend, did not enter at all into his consideration: his object was, to produce effect—to exalt and dilate the character through whom he was to interest or appal us—and to raise our conception of it, by all the helps that could be derived from the majesty of nature, or the dread of superstition. It is enough, therefore, if the situation in which he has placed him is *conceivable*, and if the supposition of its reality enhances our emotions and kindles our imagination,—for it is Manfréd only that we are required to fear, to pity, or admire.—*Jeffrey, Edinburgh Review.*

Again, the case is *conceivable* of a corporation, or an academical body, going on for centuries in the performance of the routine-business which came in its way, and preserving a good understanding between its members, with statutes almost a dead letter and no precedents to explain them.—*Newman, Essay on the Development of Christian Doctrine, ch. iii. § 4.*

If, as Sir William Hamilton says, those propositions only are *conceivable* of which subject and predicate are capable of unity of representation, then is the subjectivity of space inconceivable; for it is impossible to bring the two notions, space and property of the ego, into unity of representation.—*Herbert Spencer, Principles of Psychology, pt. i. ch. iii.*

Conceivableness. *s.* Attribute suggested by *Conceivable*.

Not to dwell upon the fact that his whole argument turns upon the existence of space and time, and that for the belief in their existence the universal postulate is his sole warrant; and only observing by the way, that the distinction he draws between these and other things, hinges entirely upon *conceivableness* and inconceivableness; let us go on to remark, that he infers from our inability to conceive the annihilation of space and time, joined with our ability to conceive the annihilation of all other things—he infers from these facts, that space and time are receptivities, subjective conditions and not objective realities. We can conceive bodies non-existent; we cannot conceive time and space non-existent; therefore, time, and space are forms of thought.—*Herbert Spencer, Principles of Psychology, pt. i. ch. iii.*

Conceivably. *adv.* In a *conceivable* manner; intelligibly.

The first thing God did, or possibly and *conceive*-

ably could do, was to determine, to communicate Himself: and did so accordingly.—*Bishop Mountagu, Appeal to Caesar, p. 61.*

A snow-drift which obstructs a road, and a vein of valuable ore, may *conceivably* each furnish employment for an equal number of labourers.—*Whately, Elements of Logic, b. iii. § 10.*

Conceive. *v. a.* [directly from *Fr. concevoir*, which is from *Lat. concipio*, a compound of *con* and *cipio* = take.]

1. Form in the mind; imagine.

Nebuchadnezzar hath *conceived* a purpose against you.—*Jeremiah, xlii. 30.*

If you compare my gentlemen with Sir John, you will hardly *conceive* him to have been bred in the same climate.—*Swift.*

Similarly, though men may have thought some things inconceivable which were not so, there may still be inconceivable things; and the inability to *conceive* the negation of a thing, may still be our best warrant for believing it. Conceiving the entire truth of Mr. Mill's position, that, during any phase of human progress, the ability or inability to form a specific conception wholly depends on the experiences men have had; and that, by a widening of their experiences, they may, by and by, be enabled to *conceive* things before inconceivable to them; it may still be argued that as, at any time, the best warrant men can have for a belief is the perfect agreement of all pre-existing experience in support of it, it follows that, at any time, the inconceivableness of its negation is the deepest test any belief admits of.—*Herbert Spencer, Principles of Psychology, pt. i. ch. ii.*

We can neither *conceive*, on the one hand, an ultimate minimum of space or time; nor can we, on the other, *conceive* their infinite divisibility. In like manner, we cannot *conceive* the absolute commencement of time, nor the utmost limit of space, and are yet equally unable to *conceive* them without any commencement or limit.—*Sir W. Hamilton, Edition of Reid, p. 377.*

2. Admit into the womb; form in the womb.

I was shapen in iniquity, and in sin did my mother *conceive* me.—*Psalms, li. 5.*

Conceive. *v. n.*

1. In the following instances, and in most (? all) others, the construction seems to have arisen out of the notion that *conceive* = *think*, and that we can *conceive* of an object what we think of it. But thinking of an object is different from thinking it; and in Metaphysics, where this distinction is important, to *conceive* = *think* in the latter sense only.

The griev'd commons
Hardly *conceive* of me: let it be nois'd,
That, through our intercession, this revokement
And pardon comes. *Shakespeare, Henry VIII. i. 2.*

Conceive of things clearly and distinctly in their own natures; *conceive* of things completely in all their parts; *conceive* of things comprehensively in all their properties and relations; *conceive* of things extensively in all their kinds; *conceive* of things orderly, or in a proper method.—*Watts, Logic.*

I could not *conceive* of it as an affair of yesterday.—*Lamb, Essays of Elia, The superannuated Man.*

2. Become pregnant.

The flocks should *conceive* when they came to drink.—*Genesis, xxx. 39.*

O what avails me now that honour high
To have *conceived* of God, or that salute,
Hail highly favour'd, among women blest!

Milton, Paradise Regained, ii. 66.
The beauteous maid, whom he beheld, possess'd:
Conceiving as she slept, her fruitful womb
Swell'd with the founder of immortal Rome.

Conceiver. *s.* One who conceives.

Though hereof prudent symbols and pious allegories be made by wiser *conceivers*, yet common heads will fly unto superstitious applications.—*Sir T. Browne, Vulgar Errors.*

Conceiving. *verbal abs.* Conception; apprehension; understanding.

Strikes life into my speech, and shews much more
His own *conceiving.* *Shakespeare, Cymbeline, iii. 3.*

Concement. *v. a.* Cement together. *Rare.*

The world is but a more magnificent building, all the stones are gradually *concemented*, and there is none that exists alone.—*Felltham, Resolves. (Ord MS.)*

Concent. *s.* (the accent given as in the extracts) [*Lat. concentus*; Italian, *concento*.] Harmony; concord of sound; unison. *Obsolete.*

It is to be considered, that whatsoever virtue is in numbers, for conducing to *concent* of notes, is rather to be ascribed to the ante-number than to the entire number.—*Bacon.*

* Birds, winds, and waters sing with sweet *concent*.
Fairfax, Translation of Tasso, xviii. 19.
That undisturbed song of pure *concent*,
Aye sing before the sapphire-colour'd throne
To Him that sits thereon.

Milton, Ode at a Solemn Musick.

With to.

Reasons borrowed from nature and the schoolmen as subservient mediums, carry a music and *concent* to that which God hath said in his word.—*Dr. Mayne.*

'Tis in *concent* to his own principles, which allow no merit, no intrinsic worth to accompany one state more than another.—*Bishop Atterbury.*

Concét. *v. a.* Harmonize. *Rare.*

Such music is wise words with time *concented*.
Spenser, Faerie Queen, iv. 2. 2.

Concétful. *adj.* Completely harmonious. *Rare.*

Concéntrate. *v. a.*

1. Drive into a narrow compass; drive towards the centre; consolidate: (contrary to *expand* or *dilate*).

Perhaps it is right to assume that the policy recommended appealed to Stephen's chivalrous instincts, and that the king was ashamed to *concentrate* his strength on a woman.—*C. H. Pearson, The early and middle Ages of England, ch. xxviii.*

2. Intensify by freeing from extraneous matters: (opposed to *dilate*).

Spirit of vinegar *concentrated* and reduced to its greatest strength, will coagulate the serum.—*Arbuthnot, On the Nature and Choice of Aliments.*

Concéntration. *s.* Collection into a narrow space round the centre; compression into a narrow compass.

All circular bodies, that receive a *concentration* of the light, must be shadowed in a circular manner.—*Pecham, Compleat Gentleman.*

Concéntré. *v. n.* [*Fr. concentrer*; from *Lat. centrum* = centre.] Tend to one common centre; have the same centre with something else.

The bricks having first been formed in a circular mould, and then cut, before their burning, into four quarters or more, the sides afterwards join so closely, and the points *concentre* so exactly, that the pillars appear one entire piece.—*Sir H. Wotton.*

All these are like so many lines drawn from several objects, that some may relate to him, and *concentre* in him.—*Hale.*

Concéntré. *v. a.* Direct or contract towards one centre.

The having a part less to animate, will serve to *concentre* the spirits, and make them more active in the rest.—*Dr. H. More, Decay of Christian Piety.*
In these *concentring* all their precious beams
Of sacred influence! *Milton, Paradise Lost, ix. 106.*

Concéntric. *adj.* Having one common centre.

If, as in water stirr'd, more circles be
Produc'd by one, love such additions take;
Those, like so many spheres, but one heav'n make;
For they are all *concentrick* unto thee.

Donne, Poems, p. 27.
Any substance, pitched steadily upon two points, as on an axis, and moving about on that axis, also describes a circle *concentrick* to the axis.—*Mozon, Mechanical Exercises.*

Circular revolutions in *concentrick* orbs about the sun, or other central body, could in no wise be attained without the power of the Divine arm.—*Bentley, Sermons, 7.*

If a stone be thrown into stagnating water, the waves excited thereby continue some time to arise in the place where the stone fell into the water, and are propagated from thence into *concentrick* circles upon the surface of the water to great distances.—*Sir I. Newton, Opticks.*

Concéntrical. *adj.* Same as *Concentric*.

The manner of its concretion is by *concentrical* rings, like those of an onion about the first kernel.—*Arbuthnot, On the Nature and Choice of Aliments.*
If the crystalline humour had been *concentrical* to the sclerotics, the eye would not have admitted a whole hemisphere at one view.—*Ray, Wisdom of God manifested in the Works of the Creation.*

Concéntricate. *v. a.* Concentrate. *Rare.*

Let angels and men contribute as much light as they can; let them knit and *concentricate* their beams.—*Culverwell, Light of Nations, 100. (Ord MS.)*

Could angels and men have united and *concentricated* all their reason, yet they would never have been able to spy out such profound and mysterious excellencies.—*Ibid. 138. (Ord MS.)*

CONC

Concéntral. *adj.* Harmonious. *Rare.*—

Milton, full of these Platonick ideas, has here a reference to this consummate or *concentual* song of the ninth sphere, which is undisturbed and pure, that is, unalloyed and perfect.—*T. Warton, Notes on Milton's smaller Poems.*

Concept. *s.* [Lat. *conceptum*=thing conceived.] Object conceived by the mind; mental representation, considered as the result of an act of conception, rather than the act itself. See *Conception*.

Let us form to ourselves a *concept* of the universe. What is true of our *concept* of creation holds of our *concept* of annihilation.—*Sir W. Hamilton, Discussions on Philosophy and Literature*, p. 592.

The subjectivity of time and space being, he alleges, irresistible as an inference, he insists on it as a fact, and to receive it as a fact involves two impossibilities—the forming of *concepts* of time and space as subjective forms, and the abolition of the *concepts* of time and space as objective realities.—*Herbert Spencer, Principles of Psychology*, pt. i. ch. iii.

If, then, Hume's argument claim to be anything more than a string of logical forms containing no substance, its first term—an impression—must be used only as the representative of a definite *concept*; and no such definite *concept* can be formed without two other things—the impressing and the impressed—being involved.—*Ibid.*

In proportion as the number of *concepts* which a proposition involves is great, and the mental transitions from *concept* to *concept* are numerous, the fallibility of the test will increase.—*Ibid.* ch. ii.

Conceptacle. *s.* [Fr. *conceptacle*; Lat. *conceptaculum*.] That in which anything is contained; vessel; receptacle.

There is at this day resident, in that huge *conceptacle*, water enough to effect such a deluge.—*Woodward, Essay towards a Natural History of the Earth*, preface.

Conceivable. *adj.* Conceivable. *Rare.*

Some of his attributes, and the manifestations thereof, are not only highly delectable to the intellective faculty, but are most suitable and easily *conceivable* by us, because apparent in his works.—*Sir M. Hale, Origination of Mankind*.

Conception. *s.* Result or process of conceiving: (*mental* or *physical*). See *Concept*.

1. Concept: (the distinction indicated under that word being either not recognized, or overlooked).

As *conceptions* are the images or resemblances of things to the mind within itself, in the like manner are words or names the marks, tokens, or resemblances of those *conceptions* to the minds of them whom we converse with.—*South, Sermons*.

Consult the acutest poets and speakers, and they will confess that their quickest, most admired *conceptions* were such as darted into their minds, like sudden flashes of lightning, they knew not how, nor whence; and not by any certain consequence, or dependence of one thought upon another, as it is in matters of ratiocination.—*Ibid.*

To have right *conceptions* about them, we must bring our understandings to the inflexible natures and unalterable relations of things, and not endeavour to bring things to any preconceived notions of our own.—*Locke*.

2. Act of which a concept (in the strict sense of the term) is the result.

And as if beasts conceiv'd what reason were,
And that *conception* should distinctly show
They should the name of reasonable bear;
For, without reason, none could reason know.

Sir J. Davies.

A form of words uniting attributes not presentable in an intuition, is not the sign of a thought, but of the negation of all thinking. *Conception* must thus be carefully distinguished, as well from mere imagination, as from a mere understanding of the meaning of words. Combinations of attributes logically impossible may be expressed in language perfectly intelligible. There is no difficulty in understanding the meaning of the phrase *Bilinear Figure*, or *Iron-gold*. The language is intelligible, though the object is inconceivable.—*Mansel, Prolegomena Logica*.

3. Notion; idea, in general.

Thou but remember'st me of my own *conception*. I have perceived a most faint neglect of late; which I have rather blamed as my own jealous curiosity, than as a very pretence and purpose of unkindness.—*Shakespeare, King Lear*, i. 4.

Please your highness, note
His dangerous *conception* in this point:
Not friendly by his wish to your high person,
His will is most malignant, and it stretches
Beyond you to your friends. *Id., Henry VIII.* i. 2.

4. Conceit; sentiment; pointed thought.

He is too flatulent sometimes, and sometimes too

CONC

dry; many times unequal, and almost always forced; and, besides, is full of *conceptions*, points of epigram, and witticisms; all which are not only below the dignity of heroic verse, but contrary to its nature.—*Dryden, Dedication to Translation of Juvenal*.

5. Act of conceiving, or growing quick in pregnancy.

I will greatly multiply thy sorrow, and thy *conception*: in sorrow thou shalt bring forth children.—*Genesis*, iii. 16.

Thy sorrow I will greatly multiply
By thy *conception*; children thou shalt bring
In sorrow forth. *Milton, Paradise Lost*, x. 193.

Conceptionous. *adj.* Apt to conceive; fruitful. *Rare.*

Common mother, . . .
Ensear thy fertile and *conceptionous* womb;
Let it no more bring out ingrateful man.
Shakespeare, Timon of Athens, iv. 3.

Conceptiva. *adj.* Capable of, or active in, conceiving: (*mentally* or *physically*).

In hot climates, and where the uterine parts exceed in heat, by the coldness of this simple they may be reduced into a *conceptive* constitution.—*Sir T. Browne, Vulgar Errors*.

Exception might be taken to this argument on several grounds—on the ground that space and time in the abstract, are not strictly *conceivable* things at all in the sense that other things are: on the ground that the alleged inconceivableness of a minimum or a limit is not really of the same nature as those with which it is classed—is not due to an arrest of the *conceptive* power, but a baffling of it—is not an inability to put one *conception* in place of another, but an inability to form any *conception*. Moreover, it might be urged that there is no true parallelism between these cases in which both alternatives are alike inconceivable, and all other cases, in which one alternative is conceivable and the other not.—*Herbert Spencer, Principles of Psychology*, pt. i. ch. ii.

Conceptualism. *s.* In *Metaphysics*. System in which more attention is paid to the relation between a mental object and the mind which conceives it, than to either the object (*res*) itself with reference to the nature of things in themselves, or to the name (*nomen*) as suggestive of the class to which it belongs; hence intermediate to Realism and Nominalism.

The close of all Albert the Great's intense labours, of his enormous assemblage of the opinions of the philosophers of all ages, and his efforts to harmonize them with the high Christian theology, is a kind of eclecticism, an unreconciled realism, *conceptualism*, nominalism, with many of the difficulties of each.—*Milman, History of Latin Christianity*, b. xiv. ch. iii.

The *Conceptualism* or eclecticism of St. Thomas (he cannot be called a Nominalist) admitted so much realism under other forms of speech; the Realism of Duns Scotus was so absolutely a realism of words, reality was with him something so thin and unsubstantial; the Augustinianism of St. Thomas was so guarded and tempered by his high ethical tone, by his assertion of the loftiest Christian morality; the Pelagianism charged against Scotus was so purely metaphysical, so balanced by his constant, for him vehement, vindication of Divine grace, only with notions peculiar to his philosophy, of its mode of operation, and with almost untraceable distinctions as to its mode of influence, that nothing less than the inveterate pugnacity of scholastic teaching, and the rivalry of the two orders, could have perpetuated the strife.—*Ibid.* b. xiv. ch. iii.

Conceptualist. *s.* (construction often *adjectival*, as in '*conceptualist doctrine*,' '*conceptualist principles*.') Supporter of the doctrine of Conceptualism.

St. Thomas [Aquinas], like his predecessor, Albert, on the great question of universals, is eclectic; neither absolutely realist, *conceptualist*, nor nominalist. Universals are real only in God, and but seemingly, in potentiality rather than actuality: they are subjective in the intelligence of man; they result objectively in things.—*Milman, History of Latin Christianity*, b. xiv. ch. iii.

Concern. *v. a.* [Fr. *concerner*.] See *Discreet*.

1. Relate, belong, or be of importance, to anything.

Exclude the use of natural reasoning about the sense of holy scripture, concerning the articles of our faith; and then that the *concern* of the articles of our faith, who can *concern* us?—*Hooker, Ecclesiastical Polity*, b. iii. § 82.

Gracious things
Thou hast reveal'd; those chiefly which *concern*
Just Abraham, and his seed.

Milton, Paradise Lost, xii. 271.

Our wars with France have affected us in our most tender interests, and *concerned* us more than

2. Interest; engage by interest; disturb.

Concern. *s.*

1. Business; affair: (considered as *relating to some one*).

Let early care thy main *concerns* secure;
Things of less moment may delays endure.

Sir J. Denham.

This manner of exposing the private *concerns* of families, and sacrificing the secrets of the dead to the curiosity of the living, is one of those licentious practices, which might well deserve the animadversion of our government.—*Addison, Freeholder*.

A heathen emperor said, if the gods were offended, it was their own *concern*, and they were able to vindicate themselves.—*Swift*.

Religion is no trifling *concern*, to be performed in any careless and superficial manner.—*Rogers*.

Probably, if the failure . . . had been followed by the stoppage of one or two more banking *concerns*, that which we can now look back upon as a past period of depression would have culminated into a disastrous commercial crisis.—*Saturday Review*, Nov. 19, 1864.

2. Interest; engagement.

No plots th' alarm to his retirements give:
'Tis all mankind's *concern* that he should live.

Dryden.

When we speak of the conflagration of the world, these have no *concern* in the question.—*T. Burnet, Theory of the Earth*.

3. Importance; moment.

Those discourses, together with a little book newly printed at Paris, according to the license of that nation, of the amours of Henry IV., which was by them presented to him, and too *concernedly* read by him, made that impression upon his mind, that he was resolved to raise the quality and degree of that lady.—*Lord Clarendon, Life*, ii. 322.

Concerning. *prep.* Relating to; with relation to.

There is not any thing more subject to error than the true judgment *concerning* the power and forces of an estate.—*Bacon*.

Concerning. s. Business; affair of moment. *Rare*.

For who, that's but a queen, fair, sober, wise,
Would from a paddock, from a bat, a gib,
Such dear concerns hide? *Id., Hamlet, iii. 4.*

Concernment. s. *Obsolete*.

1. Thing in which we are concerned or interested; affair; business; interest.

To mix with thy concerns I desist,
Henceforth not too much disapprove my own.
Milton, Samson Agonistes, 969.

When my concernment takes up no more room or compass than myself, then, so long as I know where to breathe and to exist, I know also where to be happy.—*South*.

Concert. s. [*Italian, concerto*.] Symphony; many performers playing to or singing the same tune.

Having heard, said the Saint, you're fond of hymns,
And indeed that musical noise betray'd you,
Myself, and my choir of cherubins.

Are come, for a while, to serenade you.
In vain did the horrified Henley say
'Twas all a mistake!—she was misdirected;
And point to a concert, over the way
Where fiddlers and angels were expected.
Moore, Lord Henley and St. Cecilia.

[Concert.—Agreement. According to *Dierz* from *concertare*, to contend with, but the explanation of Calvera, which he mentions, is more satisfactory. The Latin has *serere*, to join together, interweave (whence *sertum*, a wreath of flowers), and tropically to combine, compose, contrive. The compound *conserere* is used much in the same sense, to unite together in action; *conserere sermonem*, to join in speech; *consertio*, a joining together. Hence Italian *concerto*, duly wrought and joined together, a harmonious consort, an agreement; *concertare*, to concert or interlace with proportion, to agree and accord together, to sing, to tune or play in consort. (Florio.) When the word *concerto* was thus applied to the accord of musical instruments, it agreed so closely both in sense and sound with *concerto*, Latin *concentus* (cantus, melody, song), harmony, harmonious music, that the two seem to have been confounded together, and *concerto*, borrowing the *c* of *concerto*, became *concerto*, whence the French and English *concert*. In English again the word was confounded with *consort*, from Latin *consors*, -sortis, partaking, sharing, a colleague, partner, comrade. 'Right hard it was for wight which did it hear
To read what manner musick that mote be;
For all that pleasing was to living ear
Was there *consorted* in one harmonie,
Birds, voices, instruments, winds, waters, all agree.'
(Spenser, Faerie Queen in Rich.)
—*Wedgwood, Dictionary of English Etymology*.

He forms the well concerted scheme of mischief.

Concérto. s. [*Italian*.] Piece of music composed for a concert.

A well-composed *concerto* of instrumental music, by the number and variety of the instruments, by the variety of the parts which are performed in them, &c., presents an object so agreeable, so great, so various, and so interesting.—*Smith, On the Imitative Arts, pt. ii.*

Nor will a *concerto* of Geminiani's be so readily understood as an overture of Jomelli's, though performed by one and the same orchestra.—*Mason, Essay on Church Music, p. 17.*

Concession. s. [*Lat. concessio, -onis*; from *cedo* = yield, give up.]

2. Specially applied, particularly of late, to grants of land, privileges, or immunities to companies.

One of the forms that diplomatic fears on this subject seem to have taken is, that the execution of the Suez canal would immensely benefit French influence in Egypt. It has been proposed and advocated by Frenchmen. A Frenchman has obtained the concession; and it may be executed by French engineers and French workmen.—*Edinburgh Review, Jan. 1856, p. 264.*

Concessive. adj. Implying concession.

Hypothetical, conditional, *concessive*, and exceptive conjunctions seem in general to require a subjunctive mood after them.—*Bishop Louth, English Grammar*.

It was the strife of the two proud, hardest, and least *conciliatory* of men, in defence of the two most stubbornly irreconcilable principles which could be brought into collision, with everything to exasperate, nothing to avert, to break, or to mitigate the shock.—*Milman, History of Latin Christianity*, b. xi. ch. ix.

4. In Logic. Inferential proposition of a syllogism, as compared, or contrasted, with the premises.

He granted him both the major and the minor; but denied him the *conclusion*.—*Addison, Freeholder*.

In pursuing the supposed investigation, it will be found that every *conclusion* is deduced, in reality, from two other propositions; (thence called premises); for though one of these may be, and commonly is, suppressed, it must nevertheless be understood as admitted. . . . It is evidently immaterial to the argument whether the *conclusion* be placed first or last; but it may be proper to remark, that a premiss placed after its *conclusion* is called the reason of it, and is introduced by one of those conjunctions which are called causal; viz. 'since,' 'because,' &c., which may indeed be employed to designate a premiss, whether it came first or last. The illative con-

junctions, 'therefore,' &c., designate the *conclusion*. It is a circumstance which often occasions error and perplexity, that both these classes of conjunctions have also another signification, being employed to denote, respectively, cause and effect, as well as premiss and conclusion: e.g. If I say, 'this ground is rich, because the trees on it are flourishing,' or 'the trees are flourishing, and therefore the soil must be rich,' I employ these conjunctions to denote the connexion of premiss and conclusion; for it is plain that the luxuriance of the trees is not the cause of the soil's fertility, but only the cause of my knowing it.—*Whately, Elements of Logic*, b. i. § 2.

Every argument consists of two parts: that which is proved, and that by means of which it is proved. The former is called, before it is proved, the question; when proved, the *conclusion*, (or inference:) that which is used to prove it, if stated last, (as is often done in common discourse,) is called the reason, and is introduced by 'because,' or some other causal conjunction; e.g. 'Caesar deserved death, because he was a tyrant, and all tyrants deserve death.' If the *conclusion* be stated last (which is the strict logical form, to which all reasoning may be reduced,) then, that which is employed to prove it is called the premisses, and the *conclusion* is then introduced by some illative conjunction, as 'therefore,' e.g.

All tyrants deserve death:

Caesar was a tyrant;

therefore he deserved death.

Since, then, an argument is an expression in which 'from something laid down and granted as true (i.e. the premisses) something else (i.e. the *conclusion*) beyond this must be admitted to be true, as following necessarily (resulting) from the other;' and since logic is wholly concerned in the use of language, it follows that a syllogism (which is an argument stated in a regular logical form) must be 'an argument so expressed, that the conclusiveness of it is manifest from the mere force of the expression,' i.e. without considering the meaning of the terms: e.g. in this syllogism, 'Every Y is X, Z is Y, therefore Z is X,' the *conclusion* is inevitable, whatever terms X, Y, and Z respectively are understood to stand for. And to this form all legitimate arguments may ultimately be brought.—*Ibid.* b. i. ch. iii. § 1.

5. Inference, in general.

The *conclusion* of experience, from the time past to the time present, will not be sound and perfect.—*Bacon, War with Spain*.

And marrying divines principles and grounds, Out of their match a true *conclusion* brings.

Conclusively. *adv.* In a conclusive manner; decisively; with final determination.

Conclusiveness. *s.* Attribute suggested by *Conclusive*; power of determining the opinion; regular consequence.

Consideration of things to be known, of their several weights, *conclusiveness*, or evidence.—*Sir M. Hale, Origination of Mankind*.

It is justly remarked by Dugald Stewart, that though our reasonings in mathematics depend entirely on the axioms, it is by no means necessary to our seeing the *conclusiveness* of the proof, that the

axioms should be expressly adverted to.—*J. S. Mill, System of Logic*.

Even if you suppose a case where one or both of the premisses shall be manifestly false and absurd, this will not alter the *conclusiveness* of the reasoning; though the conclusion itself may perhaps be absurd also. For instance, 'All the ape-tribe are originally descended from reptiles or insects: mankind are of the ape-tribe; therefore mankind are originally descended from reptiles or insects:' here, every one would perceive the falsity of all three of these propositions. But it is not the less true that the conclusion follows from those premisses, and that if they were true, it would be true also.—*Whately, Elements of Logic*, b. i. § 3.

If one or both of the premisses be merely probable, we can infer from them only a probable conclusion; though the *conclusiveness*,—that is, the connexion between the premisses and the conclusion—is perfectly certain. For instance, assuming that 'every month has 30 days,' (which is palpably false,) then, from the minor-premise that 'April is a month,' it follows (which happens to be true) that 'April has 30 days;' and from the minor premiss that 'February is a month,' it follows that 'February has 30 days,' which is false. In each case the *conclusiveness* of the argument is the same; but in every case, when we have ascertained the falsity of one of the premisses, we know nothing (as far as that argument is concerned) of the truth or falsity of the conclusion.—*Ibid.* b. ii. ch. iii. § 1.

Concoagulate. *v. u.* Curdle or congeal one thing with another. *Rare*.

The saline parts of those, upon their solution by the rain, may work upon those other substances, formerly *concoagulated* with them.—*Boyle, Experiments*.

them.—*Watts, Logic.*

This word is the parent of a joke, reflecting on Dr. Adam Littleton, the well-known author of a Latin dictionary; which has been so confidently asserted in 'Anecdotes of the English Language,' as well as in other publications, that I think it right to shew the inaccuracy of the pretended narrative, and to undeceive the wits as well as the more sober investigators of lexicography. 'When Dr. Littleton was compiling his dictionary, and announced the verb *concurro* to his amanuensis, the scribe, imagining that the various senses of the word would, as usual, begin with the most literal translation, said, *concur*. I suppose, sir; to which the doctor replied peevishly—*concur! condog!* The secretary, whose business it was to write what his master dictated, accordingly did his duty; and the word *condog* was inserted, and is actually printed as one interpretation of *concurro* in the first edition, 1678, (to be seen in the British Museum,) though it has been expunged, and does not appear in subsequent editions.' (Pegge's Anecdotes of the English Language.) But *condog* had before appeared in English lexicography. In Cockeram's English dictionary, under *To Agree*, in the second part, (I am citing from the edition of 1642,) are these definitions, '*concurre, cohere, condog, condescend*.' Littleton therefore cited what had before been used, but justly discharged it afterwards; though the editors of the Cambridge dictionary in 1693 thought proper to readmit it under *concurro*.—*Johnson*, in previous editions.]

2. In *Grammar and Logic*. Expressive of some condition or supposition; hypothetical.

Hypothetical, conditional, concessive, and exceptive conjunctions seem in general to require a subjunctive mood after them.—*Bishop Lowth, English Grammar*.

We have an example of this when the simple propositions are connected by the particle Or; as, Either A is B or C is D; or by the particle If;

as, A is B if C is D. In the former case, the proposition is called disjunctive, in the latter conditional; the name hypothetical was originally common to both. As has been well remarked by Archbishop Whately and others, the disjunctive form is resolvable into the conditional; every disjunctive proposition being equivalent to two or more conditional ones. 'Either A is B or C is D' means, 'if A is not B, C is D'; and if C is not D, A is B.' All hypothetical propositions, therefore, though disjunctive in form, are conditional in meaning; and the words hypothetical and conditional may be, as indeed they generally are, used synonymously. Propositions in which the assertion is not dependent on a condition, are said, in the language of logicians, to be categorical.—*J. S. Mill, System of Logic*, i. iv. § 3.

Hamilton, Discussions on Philosophy and Literature*, p. 591.

Conditioned. *adj.* The verb Condition, whether active or neuter, is generally, and perhaps always, connected with the substantive in its sense of stipulation or contract; the adjective Conditioned is generally connected with the substantive in its sense of temper, quality, or state. But as we rarely speak of anything as simply having a state or quality in general, the latter word is rarely found alone but, on the contrary, preceded by some word suggesting goodness or badness.

The malice of his worst-conditioned neighbours.—*Florio, First Fruits*, pref.: 1598.

The dearest friend to me, the kindest man,

The best condition'd.

Shakespeare, Merchant of Venice, iii. 2.

The sign ? preceding the fifth notice of the word *Condition* implied a doubt, the nature of which will now be considered. The element of uncertainty presented by the word *concrete* repeats itself here. Just as one participial form *concretus* is common to two different verbs, so is the word *conditio* (according, at least, to the ordinary pronunciation) a derivative common to two bases.

There is the verb *condo* = build, of which the infinitive is *condere*, the participle *conditus*, and the derivative substantive *conditio*; the vowel being short throughout. There is also the verb *condio* = preserve, season, spice, &c.; and of this the infinitive is *condire*, the participle *conditus*, and the derivative substantive *conditio*; between which and its parallel there is only the difference in the quantity, one which, with our pronunciation, allows us to consider the two forms as practically identical.

That there are several usages of the word *condition* and its derivatives, which are at least as closely connected with the idea of *preservation, keeping in order, or good keeping*, as with that of *building or construction*, is shown by such expressions as 'in good or bad condition,' 'out of condition,' and the like, as well as by the compounds given in the extracts.

Hence, although it would be difficult to prove that in any particular instance *condition* comes from *conditio*, it would be equally unsafe to affirm that in every instance it comes from *conditio*.

Into our presence. *Shakespeare, Henry VIII. i. 4.*

Conduct. v. n. Act as a conductor: (in the extract an *electric* one).

Carbon, in general, *conducts* better or worse according to the manner in which it has been prepared.—*De la Rue, Treatise on Electricity, pt. i. ch. i.: translation.*

Conducted. part. adj. In *Physics*. Applied to heat transferred from one body to another by conduction, as opposed to radiation.

The communication of heat may be effected either by radiation or *conduction*. Radiant heat may be derived either from the sun or from artificially heated bodies. *Conducted* heat may be derived from either dry or moist substances, and its effects vary somewhat as it comes from the one or the other of these sources.—*Perera, Elements of Materia Medica and Therapeutics, p. 14.*

Conductibility. s. Capability of being conducted; power of conduction.

(For example see extract under *Conductor*, 4.)

Conducting. part. adj. Leading; directing; in *Physics*, acting as a Conductor.

(For example see extract under *Conductor*, 4.)

Conduction. s.

1. Act of training up. *Rare.*

Every man has his beginning and *conduction*.—*B. Jonson, The Case is altered.*

2. In *Physics*. See extract.

There are three perfectly distinct modes in which the surface of the earth becomes cooled, and these are by evaporation, by *conduction*, and by radiation.

The second mode in which plants are cooled is by *conduction*, or by the mere contact of cold air; and this quite independent of the cold produced by evaporation. When a cold wind drives along the surface of the ground, it gradually cools it, and, of course, likewise the plants growing on it, by the simple abstraction or carrying away of the heat. So long as the surrounding air is colder than the plants it will tend to reduce their temperature; and if the air is in motion, as fresh portions of cold air must gradually come in contact with the plants, they must gradually get colder and colder, even though no evaporation take place, until they become as cold

CONDUCTITIOUS } CON D

as the air itself.—*Lindley, Theory and Practice of Horticulture*, b. ii. ch. ii.
(See also extract under Conducted.)

Conductitious. *adj.* Hired; employed for wages.

The persons were neither titularies nor perpetual curates, but intirely *conductitious* and removable at pleasure.—*Ayliffe, Parergon Juris Canonici*.

Conductor. *s.*

1. Leader; one who shows another the way by accompanying him.

And zeal the blind conductor of the will. *Dryden.*

2. Chief; general.

Who is conductor of his people?

Shakespeare, King Lear, iv. 7.

3. Manager; director; regulator; person who attends to the passengers in an omnibus, as distinguished from the driver.

If he did not intirely project the union and regency, none will deny him to have been the chief conductor in both.—*Addison.*

4. In *Physics*. See extracts.

a. In *Heat*.

If, in winter, a person with bare feet were to step from the carpet to the wooden floor, from this to the hearthstone, and from the stone to the steel fender, his sensation would deem each of these in succession colder than the preceding. Now, the truth being that all possess the same temperature, only a temperature inferior to that of the living body, the best conductor, when in contact with the body, would carry off the heat the fastest, and would therefore be deemed the coldest.—*Dr. Arnot, Elements of Physics*, pt. i. p. 25.

b. In *Electricity*.

A metal rod is to be fixed to one of the extremities of a stick of glass or wax; . . . the stick . . . is then to be rubbed. . . Small light bodies are then brought near; they are immediately attracted by the metal rod, as they would have been by the glass or wax itself. . . From this experiment we must conclude that the agent has been developed by the friction upon the glass or wax passed into the metal; since the latter has been found to be electrical without having been rubbed, and merely because it is in contact with a body that has itself been electrified. Were a glass rod, a piece of wax . . . put in place of the metal rod, it would not have acquired electricity by its simple contact with the electrified body. This property . . . of acquiring and propagating through their whole extent the electricity possessed by the part of an electrified body with which they are placed in contact, is called *conductibility* for electricity, or *electric conductivity*. Bodies which possess this property are termed *conductors*, and those which possess it not insulators. The human body, wood, especially damp wood, and in general animals, vegetables, and a great number of mineral substances, are, like the metals, *conductors* of electricity. The globe of the earth is equally so; on the contrary, atmospheric air, especially when very dry, is not so. . . An electrified surface that is put in communication with the ground, by means of one or several conducting bodies must lose its electricity.—*De la Rue, Treatise on Electricity*, pt. i. ch. i.: trans.

It has been proved by M. du Bois-Reymond that when any point in the longitudinal section of a muscle is connected by a conductor with any point in its transverse section, an electric current is established; and further, that like results occur when nerves are substituted for muscles.—*Herbert Spencer, Data of Biology*, § 19.

Whether a nerve is merely a conductor, which delivers at one of its extremities an impulse received at the other; or whether, as some now think, it is itself a generator of force which is initiated at one extremity and accumulates in its course to the other extremity; are also questions which cannot yet be answered.—*Ibid.* § 21.

5. In *Surgery*. See extract.

Conductor, in surgery, [is] an instrument the use of which is to direct the knife in certain operations. It is more commonly called a *director*.—*Hooper, Medical Dictionary*.

The rule, as laid down under Co-2., respecting the sound *n* as the final consonant in *con* or *cun*, in composition, is to the effect that before *g* it is sounded, not as the *n* in *kin*, but as the *ng* in *king*; an essentially different sound, though the spelling conceals the difference.

Words that give the combination *-ngl-*, are *apparent* exceptions to this; only, however, *apparent* ones.

It is submitted to the experience of the reader that he sounds the *n* in words like *conglomerate* as a pure *n*; in words like *conclave* as the *-ng* in *king*. How far is this an exception to the rule laid down? The rule applies to the sound only, not to the spelling. Now the sound of the *g* in *conglomerate* is not the sound of an ordinary *g*. Even in spelling phonetically, though we should write *conclave* as *kong-klaw*, we should not write *conglomerate* as *kong-glomerat*.

Webster has probably surprised many of his readers by stating that the actual sound of *glory* is *dlory*. If so, the sound which follows *n* in *conglomerate* is not that of *g*, but that of *d*; for the rule applies to both words, i.e. to the whole class beginning with *gl*.

Hence, the rule for the *g* in *gl-* is the rule for *dl-*.

Professor Max Müller has noticed this statement of Webster, and without any very strong protest; his remarks suggesting the difficulty of dealing with the question. After giving several examples of essentially different sounds being not only unconsciously confounded in different languages, but continuing to be confounded even after the distinction has been pointed out, he adds that barbarous dialects are not the only forms of speech which exemplify this phenomenon, but that the same may be found in the French (of Canada) and in English; the combination in question, according to the authority just quoted, being the particular instance supplied by the latter language.

Whether we really say *dlory*, while we fancy that we say *glory*, is surely worth enquiry; also, is it worth enquiry whether our ear in the matter is so untrained to phonetic distinctions as not to enable us to say whether we do so or not.

The opinion of the editor is, that, if rightly pronouncing *glory* mean giving to the *g* the exact sound given to it in *gory*, we do not so pronounce it. On the contrary, we pronounce it as an approximation, to say the least, to *d*. Moreover, as a general rule, our ear alone does not detect the aberration. It only does so when checked by a certain amount of attention given to the oral conditions under which the sound is formed, combined (as in the present case) with certain phenomena connected with certain combinations.

CONG

This, at any rate, it is safe to say: that whoever pronounces the *n* in *conglaciatus* or *conglomerate* as a pure *n*, i.e. not as *ng*, does not pronounce the *g* exactly as the *g* in *gun*.

Conjugate. *s.* Word agreeing in derivation with another word, and therefore generally resembling it in signification.

In what may be considered the lowest types of this process, both cells discharge their contents, and the new body or sporangium is formed between them by the mixture of their 'endochromes,' each cell appearing to have precisely the same share in the process, so that no distinction of 'sperm-cells' and 'germ-cells' can be said here to exist.—*Dr. Carpenter*, *Principles of human Physiology*, § 955.

Conjunct. *adj.* [Lat. *conjunctus*, part. of *jungo* = join.] Conjoined; concurrent; united. *Rare.*

Connascence, or Connascency. s. [Lat. *con* and *nascor* = be born, originate.]

As this is the first word under *con-n*, some remarks will be made upon the pronunciation of the words in which it occurs; these being, mainly, to the effect that, though two *ns* are written, only one is sounded; in other words, the doubling of the consonant is a doubling to the eye only, not to the ear. Yet, over and above its value in etymology, as showing the structure of the word, it has also an import in orthography.

The vowel which precedes it is always short. In most words this is the case in English; and that to such a degree that, with a few exceptions, no consonant doubled in writing is really doubled in pronunciation. It merely shows the quantity of the vowel; and, so doing, it is only an orthographical expedient.

In one series of words, however, it is doubled; viz. in those compounds where in the first element ends with the letter with which the second begins; as in *seaport-town*, and others. In *book-case* the same takes place, only that the spelling slightly conceals the doubling. Sound for sound, however, the *k* and the *c* are the same.

The same is the case, as far as the elements go, with the words now coming under notice. There are two *ns*; one at the end of *con*, and one at the beginning of the word it precedes. But the combination being of Latin rather than of English origin, the English rule is not adhered to; and for this reason the preceding remarks have been made.

This applies to the other combinations, viz. *col-l*, *com-m*, and *cor-r*. The *v* is short, and the doubling of the consonant which follows shows it to be so; yet there are really two *ls*, two *ms*, and two *rs*, just as there are two *ks* in *book-case*.

Another rule applies to the accent. Taken by itself, *con-* is a subordinate part of the word to which it belongs, and, as such, is naturally a syllable unlikely to be accented. But three facts traverse this view.

1. It is the practice in English, in many

cases, to throw the accent as far back (i.e. towards the beginning of the word) as is compatible with pronunciation; a fact which gives us such forms as *cóngregate*, *cónfluence*, and the like; and this practice appears to have been Latin as well as English.

2. It is the practice of the *English* language to distinguish certain words consisting of the same elementary sounds, but with a difference of meaning, by changing the accent from one syllable to another. A whole class of verbs and nouns are thus distinguished; e.g. 'Take a *súrvéy*,' and '*Súrvéy* the district.'

3. The third case where the *con-* is accented is in the important class of words to which there is a series of opposite or contrasted terms, as *compare*, *disparate*, and others. Here the *con-*, from its distinctive character, is naturally accented. Subject, however, to the limitations thus suggested, *con-* is unaccented.

Now the rule respecting the *English co-* (see, especially, the remarks under *Contemporary*) by no means runs parallel with that for the Latin *con-*, and this want of parallelism is important in our orthoëpy. *Co-*, preceding a word beginning with a consonant, which, according to rule, must be an *English* word (*comate*), always has an accent of some kind, the character of which is remarkable. No one pronounces *comate* either as *cómate*, with one only accent, and that on the first syllable, or as *comáte*, with only one accent, and that on the second syllable; but rather as a word with two accents: *có-máte*. That the two accents are equal is by no means asserted. The preceding, however, is the only way in which the double accentuation can be shown; inasmuch as our language has only one accentual mark. Yet, that in words compounded with *co-* there is a second or secondary accent is beyond doubt. That *co-mate* is *exactly* accented neither as *cómpact* nor as *compáct* is a matter of which anyone may satisfy himself.

As a general fact this is important; for words with secondary accents form a peculiar class in English. But beyond this it has a special bearing on certain doubtful words; i.e. words wherein the second element is Latin, but the first the *English co-*; the rule being that if the word be an *English* compound made out of Latin elements the *co-* should be accented, at least, more strongly than if it represented the *con-* of the Latin compounds. Two facts lead us towards the reason of this.

1. The *English co-*, as compared with the Latin *con-*, is a long syllable. Add an *n*, and its sound is that of *cone*.

2. The *English co-* denotes *conjunction* much more generally, and much more decidedly, than the Latin *con-*.

Hence, the notion of *union* (with ship, so to say) is different in English and Latin.

There are two relations which give it; one between a pair of objects, the other between more than a pair. When A wishes B joy of anything, there is joy on both sides, and this community of joy makes two sorts of words possible. If we look to the person who wishes joy either wholly or nearly exclusively, it is a case of simple *gratulation*; whereas, if we look at the person who receives the same equally with the person who gives it, it is a case of *con-gratulation*.

Both rejoice together. Here the idea suggested by *cum* resides in the reciprocity; and this may exist when the persons concerned are only two in number. But what if two persons wish joy to a third? In this case a second sign of community is wanted, viz. one to express the *joint* act of *gratulation*; a fact which gives not only the joy on the part of the person who receives the demonstration, but, also, that which is shared by the several individuals who join in making it.

Now few languages tolerate to any great extent the accumulation of signs of community which this involves. On the contrary; our language uses *cum*, *con*, or *co* (or whatever the sign may be) in one sense, to the *comparative* exclusion of it in the other, while the Latin language reverses the practice. If so, the *English co-* and the Latin *co-* (= *cum*) are, really, logically, though not historically, words of different languages.

In evidence of this let us look at the two series of compounds. Words like *contemn* and *contaminate*, wherein the original relation between two objects is so far lost as to give no palpable distinction between the simple form and the compound, are common in Latin, rare in English. On the other hand, such words as would be equivalent to *co-trustee* are comparatively rare in Latin; yet if any language wanted them it is the Latin. An Englishman almost wonders how with more than one consul, more than one prætor, more than one imperial chief magistrate, the Romans did without such words as *con-consul*, *com-prætor*, *co-imperator*. The fact, however, is that the words *co-* and *con-* mean different kinds of community in the different languages. In the Latin the prefix means *reciprocity* between two objects simply; in the *English joint* action on the part of two, or more than two, towards a third.

2. Act of uniting or growing together: (*con* denoting *physical union*; in which case *nascor* = grow, rather than originate).

Connate. *adj.* [Lat. *natus*, part. of *nascor*.]

Connature. *s.* Likeness in respect to nature; identity, or similarity, of character.

We have seen that the higher orders of relations are severally resolvable into relations of Likeness and Unlikeness whose terms have certain specialities and complexities. Similarity, was defined as the coextension of two *connatural* relations between states of consciousness which are themselves Like in kind but commonly Unlike in degree. Coextension we found to be, Likeness in degree between either changes in consciousness that are Like in kind, or states of consciousness that are Like in kind. It was shown that Coextension is the Likeness of two composite states of consciousness, in respect of the number and order of the elementary relations of coexistence which they severally include. Coexistence was resolved into two sequences whose terms are exactly Alike in kind and degree, exactly Unlike, or opposite, in their order of succession, and exactly Alike in the feeling which accompanies that succession. *Connature* was defined as Likeness in kind between either two changes in consciousness, or two states of consciousness.—*Herbert Spencer, Elements of Psychology*, § 94.

Connect. *v. a.* [Lat. *connecto*.] Join; link; unite; conjoin; fasten together.

The corpuscles that constitute the quicksilver, will be so *connected* to one another, that, instead of a fluid body, they will appear in the form of a red powder.—*Boyle*.

Connecting. *part. adj.* Joining; linking; fastening together.

The natural order of the *connecting* ideas must direct the syllogisms, and a man must see the connection of each intermediate idea with those that it connects, before he can use it in a syllogism.—*Locke*.

Connection. *s.* [The difference between words like *connection* and *connexion*—words derived from the same base, giving almost identical forms, and with sometimes identical, and always allied, meanings—is by no means a mere point of spelling; nor is the question to be taken up on orthographical principles only. The first point to note is the fact of the *t* being no part of the original root; but an extraneous element which, in both Greek and Latin, was inserted between the root and some of the inflections when the former ended in *h* or *p*; *τίκτω* (*trékō*); *πλεκτο* (*plékō*); *capto* (*capio*). When an *s* followed (as well as in certain other cases), this *t* was ejected. Hence, the passive participles of *plecto*, *necto*, *flecto*, &c., were *plexus*, *nexus*, *flexus*, &c. This gives two bases for the development of derivative forms; one in *x*, and one in *ct*. It is probable that originally each of these bases had its proper and peculiar series of derivatives; the former consisting of words in *-us*, like *plexus*, *nexus*, and *flexus*; the latter of words like *plectio*, *nectio*, and *flectio*. And between them a difference of sense is discernible; the forms in *-us* giving the result of an action rather than the action itself, the forms in *-tio* the action rather than the result. But that these might easily be confused is manifest. And the same chance of confusion is equally mani-

fest in the matter of form. The *-t-* in words like *flecto*, and the *-s-* in words like *flectus* (*flec-s-us*), were sounded alike when followed by *-i-*; *flection* and *flexion* being equally *flekshon*. This is the case in English; and a series of concurrent forms is the result. Which is right depends on the particular circumstances of the case.

For the difference between the *t* in the words in question and the *t* in words like *Dejection*, see that entry.

With the words, however, under notice, the first point to look at is the form they take in Latin; and when this is not a mere point of spelling, and when the word is a decided derivative from a Latin prototype rather than a word formed in England on Latin principles, the question, in the first instance at least, is settled.

Failing, however, this line of criticism, our instruments in a fresh one are the verb and participle.

We may take the form in *-ed*; determine whether it is a current genuine English word; determine its meaning; ask whether it has a form in *-ion* to correspond with it in meaning (the correspondence must be exact); and then frame it accordingly.

If all the preliminary questions are answered in the affirmative, the form in *-ction* is the better; inasmuch as participial forms in *-ted* are awkward, being participles founded on forms which are already participial.

Or, taking the opposite point of view, we may take the form in *-ion* itself, which, in order to be dealt with, must be a doubtful, or perhaps a new, one, and ask whether the verb with which it corresponds is likely to be wanted; and, if it is, use the form in *-ct*.

Either view, for the word before us, is in favour of *connection*, at least in the first instance. But between a *connection* of one kind and a *connection*, of another, a difference of import sufficient to call for a fresh form may exist, or, in the course of language, be developed. Hence, *connexion* may become necessary as a secondary form. Of such secondary form the derivative of *reflect* gives an instance. The mental process is certainly *Reflection*; but whether *Reflection* be the best word for speaking, in Physiology, of a *reflex* action, is by no means so certain. *Complexion*, on the other hand, is beyond doubt. Each word, then, must be taken on its own merits, the only two general rules being that—

1. Wherever there is a verb in *-ct*, with its participle in *-cted*, the derivation from it is, in the first instance, in *-ction*.

2. That wherever the form in *-ion* is the earlier word, and doubts arise regarding its spelling, the answer to the question as to what is to be the corresponding form in *-ed* is in favour of *-ct*.

When there comes a sufficient case for a secondary form is a point that can scarcely be determined *a priori*. It is possible that some writers may think that abstract relations, such as those between the premises and conclusion of a syllogism, or the like, give a class to which *connection* may conveniently be limited; whilst an actual material link, like that of a tether or a chain, is best called a *connexion*. The present editor, who would preserve both

forms, thinks this too slight a difference, referring to *Connexion* for his reasons.

In the extracts under both entries may be seen a few out of the numerous authorities on each side. It is doubtful, however, whether the spelling is exactly that of the authors whose names are subjoined. From pretty wide an induction the editor infers that the printers have had more to do with the matter than the writers. The numbers, however, are in favour of the *x*.

To two of the authors particular attention is directed. One gives the *-ct* of the verb in the same sentence with *-x-* in the noun. Another gives both forms from the same work; the form in *-x-* being the exceptional one, and perhaps a quotation. See *Connexion*, *Inflection*, *Reflection*.

For definition see *Connexion*, 1, 2, and the concluding paragraph under that entry.

It has been lately shown by Mr. J. L. Clarke, however, that a tract of vesicular matter does exist on either side, in intimate *connection* with the posterior roots of the nerves.—*Dr. Carpenter, Principles of human Physiology*, § 697.

The massacre of Saint Bartholomew, the murder of the first William of Orange, the murder of Henry the Third of France, the numerous conspiracies which had been formed against the life of Elizabeth, and, above all, the gunpowder treason, were constantly cited as instances of the close *connection* between vicious theory and vicious practice.—*Macaulay, History of England*, ch. vi.

He soon attains the conviction that there is no regular and uninterrupted ascent in the scale of organisation, as Bonnet fancied; no single progressive series of beings; no necessitated *connection* of such, as the poet believed, who sang,—

‘From Nature’s chain whatever link we strike,
Tenth or ten thousandth breaks the chain alike.’

(Pope.)
—Owen, *Lectures on Comparative Anatomy*, lect. xx.

Connective. *adj.* Having the power of joining or connecting together.

There are times when prepositions totally lose their *connective* nature, being converted into adverbs, and used in syntax accordingly.—*Harris, Hermes*, ii. 3.

This character is very obvious in the liver of man, which is peculiarly firm and compact, and has less of *connective* tissue between its different parts than is found in that of many other mammalia.—*Dr. Carpenter, Principles of human Physiology*, § 623.

Connective. *s.*

1. In *Grammar*. Particle having the power of joining or connecting.

Connectives, according as they connect either sentences or words, are called by the different names of conjunctions or prepositions.—*Harris, Hermes*, ii. 2.

2. *Connectivum*, of which it is the English, and slightly less scientific, equivalent.

The stamen itself, in its most perfect form, exhibits parts which remind us of stalked leaves; it has a stalk generally slender, which is called the filament, corresponding to the petiole, and a limb called the anther, which is in reality a modification of the blade of the leaf, exhibiting a midrib here named the *connective*, and two lateral portions called the lobes or cells.—*Henfrey, Elements of Botany*, ch. iii. § 5.

Connectively. *adv.* In a connective manner; in conjunction; in union; jointly; conjointly.

The people’s power is great and indisputable, whenever they can unite *connectively*, or by deputation, to exert it.—*Swift*.

Connectivum. *s.* [neuter of the Lat. adjective *connectivus* = connecting.] In *Botany*. Part of the filament on each side of which, in an ordinary stamen, an anther-cell is supported, representing the midrib of the leaf. See *Connective*.

Connex. *v. a.* [Lat. *connexus*, part. of *connecto* = knit or join together.] Join or link together; fasten to each other.

Those birds who are taught some words or sentences, cannot *connex* their words or sentences in coherence with the matter which they signify.—*M. Hale, Origination of Manhood*.

By chains *connex’d*, and with destructive sweep
Behold whole troops at once. —*Philips*.

Connexion. *s.*

1. Union; junction; act of fastening together; state of being fastened together.

My heart, which, by a secret harmony,
Still moves with thine, join’d in *connexion* sweet.
Milton, Paradise Lost, x. 358.

There must be a future state, where the eternal and inseparable *connexion* between virtue and happiness shall be manifested.—*Bishop Atterbury*.

2. Just relation to something precedent or subsequent; consequence of argumentation; coherence.

Contemplation of human nature doth, by a necessary *connexion* and chain of causes, carry us up to the Deity.—*Sir M. Hale*.

It will very often happen, that two of the meanings of a word will have no *connexion* with one another, but will each have some *connexion* with the third.—*Whately, Elements of Logic*, b. iii. § 10.

The sensations (it was answered) which we are conscious of, and which we receive not at random, but joined together in a certain uniform manner, imply not only a law or laws of *connexion*, but a cause external to our mind, which cause, by its own laws, determines the laws according to which the sensations are connected and experienced.—*J. S. Mill, System of Logic*, i. 1. 5.

We see in the world around us a constant succession of causes and effects connected with each other. The laws of this *connexion* we learn in a great measure from experience, by observation of the occurrences which present themselves to our notice, succeeding one another.—*Whewell*.

But the knowledge obtained by such anatomical examinations alone is of a very general kind; and requires to be made particular, to be corrected and modified, by other sources of information. One of these relates to the *connexion* of the trunks with the central organs.—*Dr. Carpenter, Principles of human Physiology*, § 691.

Besides the *connexion* between the waste of the organism as a whole, and the production of sensible and insensible motion by the organism as a whole; there is a traceable *connexion* between the waste of special parts and the activities of such special parts.—*Herbert Spencer, Inductions of Biology*, p. 171.

3. Person connected with another by marriage rather than by blood.

4. Circle of persons with whom anyone is in contact; as (in *business*) ‘Such a one has a large *connexion*.’

To these two meanings the editor would restrict the form in *x*; inasmuch as the difference between them and the preceding is at its maximum. In these, the base *-nec-* no longer means a link, or bond of union, but rather the object which is linked; and this, considering that both forms actually exist, and that the principle of representing secondary meanings, when they are sufficiently marked and there is a secondary form to match, has been recognized, is perhaps a sufficient reason for it.

Connexive. *adj.* Conjunctive. *Rare*.

The predicate and subject are joined in a form of words by *connexive* particles.—*Watts, Logic*.

Connivance. *s.* Act of winking; voluntary blindness; pretended ignorance; forbearance.

A *connivance* to admit half will produce ruin.—*Swift*.

Connivancy. *s.* *Connivance*.

She did not ransack their consciences by any severe inquisition, but rather secured them by a gracious *connivancy*.—*Bacon*.

He thinks it a scandal to government to *connive* at such facts as reject all revelation.—*Swift*.
This artist is to teach them how to nod judiciously, to *connive* with either eye.—*Spectator*, no. 303.

The feeling which makes the most loyal subject shrink from the thought of giving up to a shameful death the rebel who, vanquished, hunted down, and in mortal agony, begs for a morsel of bread and a cup of water, may be a weakness; but it is surely a weakness very nearly allied to virtue. . . . A wise and good ruler may not think it right to sanction this weakness; but he will generally *connive* at it, or punish it very tenderly.—*Macaulay, History of England*, ch. v.

Connivency. s. [L.Lat. *conniventia*.] Pretended ignorance; forbearance.

Yourself, and many others, have been driven, of late, to excuse and countenance your execrable ingratitude with a false and scandalous report of some further hope and comfort yielded to the Catholics for toleration or *connivency*, before his [K. James I.] coming to the crown, than since hath been performed.—*Lord Northampton, Proceedings against Garnet*, M. 2.

Conniver. s. One who *connives*; one who pretends blindness; one who passes wickedness uncensured.

All sins which we give allowance to, being committed, or not hindered by us if we may, are ours, as if we committed them; first, commanders; abettors, counsellors; consenters; commanders; *connivers*; concealers; not hinderers; each of these will be found guilty before God's tribunal.—*Junius, Sinne stigmatized*, p. 825: 1639.

Connaisseur. s. [Fr.] Judge; critic.

Your lesson learnt, you'll be secure
To get the name of *connaisseur*.—*Swift*.

Law and punishment being relations, and mutually *connoting* each the other, it must necessarily follow, that from that power only can be an imposition of law from which may be an infliction of punishment.—*Bishop Reynolds, On the Passions*, p. 519. (Ord MS.)

Connotation. s. Implication; inference; illation. See *Connote*.

By reason of the co-existence of one thing with another, there ariseth a various relation or *connotation* between them.—*Sir M. Hale, Origination of Mankind*.

Plato by his ideas means only the divine essence with this *connotation*, as it is variously imitable or participable by created beings.—*Norris*.

In the case of connotative names, the meaning, as has been so often observed, is the *connotation*; and the definition of a connotative name, is the proposition which declares its *connotation*. This may be done either directly or indirectly. The direct mode would be by a proposition in this form: 'Man' (or whatsoever the word may be) 'is a name connoting such and such attributes,' or 'is a name which, when predicated of anything, signifies the possession of such and such attributes by that thing.' Or thus: Man is everything which possesses such and such attributes: Man is everything which possesses corporeity, organization, life, rationality, and certain peculiarities of external form. This form of definition is the most precise and least equivocal of any; but it is not brief enough, and is besides too technical and pedantic for common discourse. The more usual mode of declaring the *connotation* of a name, is to predicate of it another name or names of known signification, which connote the same aggregation of attributes. This may be done either by predication of the name intended to be defined, another connotative name exactly synonymous, as, 'Man is a human being,' which is not commonly accounted a definition at all; or by predication two or more connotative names, which make up among them the whole *connotation* of the name to be defined. In this last case, again, we may either compose our definition of as many connotative names as there are attributes, each attribute being connoted by one; as, Man is a corporeal, organized, animated, rational being, shaped so and so; or we may employ

names which connote several of the attributes at once, as, Man is a rational animal, shaped so and so.—*J. S. Mill, System of Logic*, ch. viii. § 1.

Connotative. adj. Conveying connotation.

In regard to such names of attributes as are *connotative*, and express attributes of those attributes, there is no difficulty: like other connotative names, they are defined by declaring their connotation.—*J. S. Mill, System of Logic*, ch. viii. § 2.

Connote. v. a. [Lat. *noto* = mark.] Imply; betoken; include: (opposed to *denote*, under which and Definition a fuller illustration of the logical sense of this important word will be found).

Good, in the general notion of it, *connotes* also a certain suitableness of it to some other thing.—*South*.

The words genus, species, &c., are therefore relative terms; they are names applied to certain predicates, to express the relation between them and some given subject: a relation grounded, as we shall see, not on what the predicate *connotes*, but on the class which it *denotes*, and on the place which, in some given classification, that class occupies relatively to the particular subject. . . . Of the innumerable properties known and unknown, that are common to the class man, a portion only, and of course a very small portion, are *connoted* by its name; these few, however, will naturally have been thus distinguished from the rest either for their greater obviousness, or for greater supposed importance. These properties, then, which were *connoted* by the name, logicians seized upon, and called them the essence of the species; and not stopping there, they affirmed them, in the case of the infima species, to be the essence of the individual too; for it was their maxim, that the species contained the 'whole essence' of the thing. Metaphysics, that fertile field of delusion propagated by language, does not afford a more signal instance of such delusion. On this account it was that rationality, being *connoted* by the name man, was allowed to be a differentia of the class; but the peculiarity of cooking their food, not being *connoted*, was relegated to the class of accidental properties. . . . From the fact that the genus includes the species, in other words *denotes* more than the species, or is predicable of a greater number of individuals, it follows that the species must *connote* more than the genus. It must *connote* all the attributes which the genus *denotes*, or there would be nothing to prevent it from denoting individuals not included in the genus. And it must *connote* something besides, otherwise it would include the whole genus. Animal denotes all the individuals denoted by man, and many more. Man, therefore, must *connote* all that animal *connotes*, otherwise there might be men who are not animals; and it must *connote* something more than animal *connotes*, otherwise all animals would be men. This surplus of connotation—this which the species *connotes* over and above the connotation of the genus—is the differentia, or specific difference; or, to state the same proposition in other words, the differentia is that which must be added to the connotation of the genus, to complete the connotation of the species. The word man, for instance, exclusively of what it *connotes* in common with animal, also *connotes* rationality, and at least some approximation to that external form, which we all know, but which, as we have no name for it considered in itself, we are content to call the human. . . . To resolve any complex whole into the elements of which it is compounded, is the meaning of analysis; and this we do when we replace one word which *connotes* a set of attributes collectively, by two or more which *connote* the same attributes singly, or in smaller groups. From this, however, the question, naturally arises, in what manner are we to define a name which *connotes* only a single attribute? for instance, 'white,' which *connotes* nothing but whiteness; 'rational,' which *connotes* nothing but the possession of reason. It might seem that the meaning of such names could only be declared in two ways; by a synonymous term if any such can be found; or in the direct way already alluded to: 'White is a name *connoting* the attribute whiteness.'—*J. S. Mill, System of Logic*.

3. Acquisition by victory; thing gained.

More willingly I mention air,
This our old conquest; but remember hell,
Our hated habitation. *Milton, Paradise Lost*, i. 45.
The conquests of which we read in the history of nations are of three kinds. . . . Finally, there is that kind of subjugation of one people or country by another which results simply in the overthrow of the independence of the former, and the substitution in it or over it of a foreign for a native government. This is generally the only kind of conquest which attends upon the wars of civilized nations with one another. . . . In taking the style of the Conqueror with respect to England, as he had been wont to take that of the Bastard with reference to his ancestral Normandy, William, as has been often explained, probably meant nothing more than that he had acquired his English sovereignty for himself, by the nomination or bequest of his relation, King Edward, or in whatever other way, and had not succeeded to it under the ordinary rule of descent. Such a right of property is still, in the old feudal language, technically described in the law of Scotland as acquired by conquest, and in that of England by purchase, which is etymologically of the same meaning, the one word being the Latin conquestus, or conquisitio, the other perquisitio. — *Craik, History of English Literature*, i. 42-44.

But above all these weaknesses or exaggerated virtues there were the weak Christian graces, conscientiousness such as few kings are able or dare to display on the throne, which never swerved either through ambition or policy from strict rectitude. Among substances some are thinking or conscious beings, or have a power of thought. — *Watts, Logic*.

What I am conscious of when I see the colour blue, is a feeling of blue colour, which is one thing; the picture on my retina, or the phenomenon of hitherto mysterious nature which takes place in my optic nerve or in my brain, is another thing, of which I am not at all conscious, and which scientific investigation alone could have apprised me of. These are states of my body; but the sensation of blue, which is the consequence of these states of body, is not a state of body: that which perceives and is conscious is called mind. . . . When a stone lies before me, I am conscious of certain sensations which I receive from it; but when I say that these sensations come to me from an external object which I perceive, the meaning of these words is, that receiving the sensations, I intuitively believe that an external cause of those sensations exists. — *J. S. Mill, System of Logic*.

2. Knowing from memory; having the knowledge of anything without any new information: (with *of*).

The damsel then to Tancred sent,
Who, conscious of th' occasion, fear'd th' event.

3. Admitted to the knowledge of anything: (with *to*).

The rest stood trembling, struck with awe divine,
Æneas only conscious to the sign,
Presag'd th' event. *Dryden, Virgil's Æneid*.
Roses or honey cannot be thought to smell or taste their own sweetness, or an organ be conscious to its music, or gunpowder to its flashing or noise. — *Bentley, Sermons*.

4. Bearing witness by the dictate of conscience to anything: (with *to*).

The queen had been solicitous with the king on his behalf, being conscious to herself that he had been encouraged by her. — *Lord Clarendon*.

Consciously. *adv.* With knowledge of one's own actions.

If these perceptions, with their consciousness, always remained in the mind, the same thinking thing would be always consciously present. — *Locke*.

Consciousness. *s.* Attribute suggested by Conscious.

1. Feeling, cognizance, or perception of what passes in a man's own mind.

If spirit be without thinking, I have no idea of anything left; therefore consciousness must be its essential attribute. — *Watts, Logic*.

The postulates and axioms prefacing our expositions of exact science—our works on geometry and our mechanical treatises—are received on the direct

warrant of consciousness that they are indisputable. . . . But when from objective truths we pass to subjective ones . . . when, after analysing knowledge, we begin to analyse that which knows, we are met by the question—What is here our test of validity? *Consciousness* vouches for the truth of propositions concerning external relations; but what shall vouch for the truth of propositions concerning those internal relations which constitute the phenomena of consciousness? To reply broadly that *consciousness* must be its own surety, involves the awkward corollary that all conclusions reached by self-analysis are true; seeing that in the individual who draws them, all such conclusions are dicta of *consciousness*. This corollary is manifestly inadmissible. . . . In the one case, as in the other, some method of verifying our empirical cognitions must be found, before any sure results can be reached. True, we cannot transcend *consciousness*; but we can proceed in the ascertainment of internal truths, as we proceed in the ascertainment of external ones—we can make a particular mode of perception the guarantee of all other modes. And this is obviously what we must do. Some canon of normal thinking must be found, by their congruity or incongruity with which all conclusions respecting the phenomena of *consciousness* may be judged.—*Herbert Spencer, Data of Biology*, pt. i. ch. i. § 1.

Likeness and unlikeliness, therefore, as well as antecedence, sequence, and simultaneity, must stand apart among relations, as things sui generis. They are attributes grounded on facts, that is, on states of *consciousness*, but on states which are peculiar, unresolvable, and inexplicable. . . . Qualities, like substances, are known to us no otherwise than by the sensations or other states of *consciousness* which they excite; and while, in compliance with common usage, we have continued to speak of them as a distinct class of things we showed that in predicating them no one means to predicate anything but those sensations or states of *consciousness*, on which they may be said to be grounded. . . . Quantity is also manifestly grounded on something in our sensations or states of feeling, since there is an indubitable difference in the sensations excited by a larger and a smaller bulk, or by a greater or a less degree of intensity, in any object of sense or of *consciousness*. . . . As the result, therefore, of our analysis, we obtain the following as an enumeration and classification of all nameable things:—1st. Feelings, or states of *consciousness*. 2nd. The minds which experience those feelings. 3rd. The bodies, or external objects, which excite certain of those feelings, together with the powers or properties whereby they excite them. . . . For distinction's sake, every fact which is solely composed of feelings or states of *consciousness* considered as such, is often called a psychological or subjective fact; while every fact which is composed, either wholly or in part, of something different from these, that is, of substances and attributes, is called an objective fact.—*J. S. Mill, System of Logic*.

2. Internal sense of guilt or innocence.

No man doubts of a Supreme Being, until, from the *consciousness* of his provocations, it becomes his interest there should be none.—*Dr. H. More, Government of the Tongue*.

Such ideas, no doubt, they would have had, had not their *consciousness* to themselves, of their ignorance of them, kept them from so idle an attempt.—*Locke*.

An honest mind is not in the power of a dishonest; to break its peace, there must be some guilt or *consciousness*.—*Pope*.

(Rich.)

This project was approved by the legislature, and passed into a law 5th of September, 1798. By this law every Frenchman, from the age of twenty to twenty-five, was declared liable to be called out to serve in the regular army. . . . The first levy by *conscription*, in 1798, was 200,000 men. By an arrêté 19 Vendémiaire, year xii. (12 October, 1803), severe penalties were enacted against refractory *conscripts*, that is, those who had not joined their regiments.—*National Cyclopaedia of Useful Knowledge*.

Another mode in which the associative tendency operates, is in the formation of aggregate conceptions of things that have never been brought before our consciousness by sensory impressions. This faculty, which has been termed that of constructive association, is the foundation of imagination; and it is exercised in every other mental operation in which we pass from the known to the unknown. When we attempt to form a conception, which shall differ from one that we have already experienced as a matter of objective reality, by the introduction of a single new element—as when we imagine a brick building replaced by one of stone, in every respect similar as to size and form—we substitute in our minds the idea of stone for that of brick, and associate it by the principle of contiguity with those other ideas, of which that of the whole building is an aggregate.—*Dr. Carpenter, Principles of human Physiology, § 809.*

On examination Eutyches allowed that the Holy Virgin was consubstantial with us, and that 'our God was incarnate of her;' but he would not allow that he was therefore, as man, consubstantial with us, his notion apparently being that union with the Divinity had changed what otherwise would have been human nature. However, when pressed, he said, that, though up to that day he had not permitted himself to discuss the nature of Christ, or to affirm that 'God's body is man's body though it was human,' yet he would allow, if commanded, our Lord's consubstantiality with us.—*Newman, Essay on the Development of Christian Doctrine, ch. v. sect. 3.*

In the year 1524 there arose among the friends of the Reformation a tedious and fatal controversy respecting the presence of the body and blood of Christ in the Eucharist. Luther had rejected the doctrine of Transubstantiation, but maintained, nevertheless, that along with the elements of bread and wine the real body and blood of Christ was received by the partakers of the Lord's Supper. . . . He could allow the scriptural expressions to be consistent with the reality of the elements according to the plain testimony of our senses, and yet . . . think that those same expressions do still imply that the partaker of the real bread and wine does also partake at the same time of the material substance of Christ's human body. This, however, the advocates for the doctrine of consubstantiation must argue.—*Milner, Church History*, century 16, ch. ii.

2. Of the same age.

—*Cowley*.

[That the history of the *n* in this word, and the principles on which *contemporary* is in a fair way of excluding its rival *cotemporary* from the English language, are of some importance may be seen from the following extracts. In the previous editions they stand under *Cotemporary*; but, as the whole question is best dealt with under a single entry, they are,

in the present, removed to the word which comes first in order. *Cogential*, as contrasted with *Congenial*, has already been given.

COTEMPORARY, adj. [*con* and *tempus*, Lat. Bentley has remarked that *cotemporary* is a downright barbarism. 'For the Latins never use *co* for *con*, except before a vowel, as *coequal*, *coeternal*; but before a consonant, they either retain the *n*, as *contemporary*, *constitution*, or melt it into another letter, as, *collection*, *comprehension*: so that the word *cotemporary* is a word of his [Boyle's] own *coposition*, for which the learned world will *cogratulate* him!' (Dissertation on Phalaris, preface.)

Such is the notice of Dr. Johnson. His editor writes as follows:

'It will not be easy to confute the reasoning of this remark, by which the just rule of formation to our compound words of this class is given; though many indeed affectedly write *cogential*, *copartment*, and the like, as well as *cotemporary*. Sprat might have been added by Dr. Johnson to Locke in aid of *cotemporary*; and in modern times, both the Wartonians have adopted this spelling. Yet Locke, and Cowley, and Dryden, and Addison, are Johnson's examples for *contemporary*; and Chillingworth and Steele will be found on the same side.' (Todd, in voce.)

As far, then, as authority goes, the case in favour of the form in *n* is made out to the satisfaction of most readers; to which it may be added that it has certainly increased since the foregoing remarks of Johnson and his editor were written. Perhaps it has increased ever since the time of Bentley, inasmuch as it is Bentley whom Johnson quotes. At any rate, the only living writer with any pretensions to authority in whom I have found the form in *o* is Mr. Mill (see *Cotemporary*).

Whether *cotemporary* be a worse word than *contemporary* is one question: whether Bentley's argument be valid is another; nor are those who criticize it to be charged with undue presumption. The doctrine that nothing is weaker than its weakest point is as good in criticism as in mechanics; and it must be remembered (1) that the word in question is *English* rather than Latin, and (2) that the author of the Dissertation on Phalaris was also the emendator of Milton; his authority in the two cases being by no means equal.

That 'the Latins never use *co* for *con*, except before a vowel, &c.' is true; but it is wholly irrelevant. If, with the Latin word *cotemporarius* before him, the first person who wrote *cotemporary* had ejected the *n*, he would have been wrong. He would also have been wrong if, under the notion of putting a Latin word into an English form, he had supposed that that word was *cotemporarius*. But neither of these alternatives is the fact. The element *-temporarius* is an *English* word, and in its *English* form it has a certain Latin element prefixed to it. In short, it is a word made up in England; and, in the first instance at least, out of English elements and on English principles. What these are is evident in such words as *comate*, a word which no one ever said should be *con-mate*. Unlike *mate*, however, *temporary* is a word of Latin origin; and it is not denied that this complicates the matter, by making the resulting compound look like a word introduced *ready-made* from the Latin. Now this Bentley has either not seen, or, seeing, has assumed something which he ought to have proved, viz. the doctrine that words, though put together in England, and, as such, made out of English elements are, when the latter element is of Latin origin, to

be treated as if they were wholly Latin, i.e. Latin words adopted into English. But this would have allowed a good deal to be said on the other side. In *co-heiress*, for instance, we leave the domain of pure English, and find *co-* with a Norman affix; in *co-parcener* we get a Low Latin one; and in *co-religionist* we get nearly as much Latin as in *cotemporary*. In fact, the question is one which even now it is difficult to reduce to rule. Be this, however, as it may, it is clear that the foregoing rule falls short of the case; and so do the suggested analogues.

a) *Constitution*.—Here the omission of the *n* would be inaccurate but, only because there is no such word as *stitution* in English.

b) *Collection* is in a somewhat different predicament. With the two *ls* it is simply the Latin *collectio* in an English form. But there is such a word in English as *lection*, though a scarce one; and 'there may be (perhaps is) such a word as *co-lection* = joint reading.

c) Again, *comprehension* is from the Latin *comprehensio* treated as a whole word. *Co-prehension* (*prehension* being an English word) is liable to be coined at any time if wanted, i.e. it is a word *in posse*, meaning joint seizure.

d) *Coposition* is certainly a telling word; and, with the one which follows it, is meant to convey an objection on the principle of the *reductio ad absurdum*. But all it really means is, that, if we start with the Latin word *composition*, we are not free to eject the *n*. *Position*, however, is English, and *co-position* is a possible, though an unlikely, word; its unlikelihood depending upon circumstances other than etymological.

e) *Cogratulate* is simply the Latin *congratulari*; but, if *gratulate* were a common English word, *co-gratulation* would be a useful term for a joint address of gratulation.

The extract from Cowley is remarkable. It is one of the best lines he has written; one of the best lines of his original (for it belongs to a translation); and one of the best lines in the whole range of translations in general. Yet it neither means *cotemporary* in the ordinary sense of the term; nor was written under the ordinary influences of an English writer. The original, from Claudian's Old Man of Verona, is

'Æquævumque videt consenuisse nemus,'

as applied to the trees of the old man's planting, i.e. to trees of his own age, in the sense of *as old as himself*, rather than to trees (old or young) of the same generations. Yet, *æquævum* is not the word which is exclusively translated. The beauty of the line is got from *consenuisse*; and it is this which (probably), rather than *æquævum*, suggested the *n*. In short, the word *contemporary* here translates two words; neither exclusively, both adequately.

Upon these distinctions, then, we may ground the following statement; viz. that if *lection*, *prehension*, *position*, and *gratulate*, were words as common as *temporary*, and at the same time as liable to be required in union with *con*, they would give compounds like *cotemporary*, and that concurrently with the existing forms derived

directly from the Latin. Hence, the question is, not whether one out of two words is *right to the exclusion of the other*, but whether *both* are not *right*; and, if so, under what conditions.

That the form in *o* (*co-temporary*) is thus far justifiable is beyond doubt:

1) It is justifiable if treated as a compound made by a prefix to the English word *temporary*.

2) It is justifiable if a certain amount of early usage on the part of good writers make it so. That Boyle used it is plain on the very face of the question; and that before Bentley objected to it. Sprat, too, a good writer of prose, though an indifferent poet, used it. The Wartons, though their instincts as to what was English and what not were at least as good as either Bentley's or Johnson's, are scarcely evidence. As scholars, they would be in favour of the form in *n*; but they were not only Oxford men, but Oxford men writing at a time when a sort of academical guerilla was going on between the two universities, of which the Triumph of Isis by Joseph Warton (on one side), and the reply to it by Mason (on the other), are records.

3) It is justifiable so far as the rule that 'Words made out of Latin elements, but put together in England, are to be treated as direct introductions from the Latin,' has not yet been established; for it is only by the establishment of a rule like this that *cotemporary* can be condemned.

Contemporary, on the other hand, is justifiable:

1) So far as authority, like a prophecy fulfilling its own accomplishment, is an effective philological influence; and this is saying much.

2) So far as the rule just alluded to has a presumption in its favour.

3) So far as the etymological fiction that, when a word made out of English elements takes the general form of a word derived from the Latin, the existence of a Latin original may be presumed. This fiction is, by no means, condemned; still it is but a fiction.

We may, then, say that there are *two concurrent forms*. Which is the better? The pure etymological view is certainly in favour of the form in *o*. The question, however, is only important under the notion that one must be preferred to the other. The editor would keep both; but for this to be done, a difference of import must be found.

a. In its current sense *contemporary* is likely to keep its place. If so,

b. *Cotemporary* may be advantageously made over to the phraseology of metaphysics. Few will deny that as an approximate synonym for *coeternal* it is the better word; indeed Time (*tempus*) is just the idea for which we want as many words expressive of *coexistence* in it as can be got. Hence it is, perhaps, safer to say that the tendency of language is to put *cotemporary* in the same class with *coexistence*, *cointense*, and the like, than to say that, in the ordinary acceptation, it is a better word than *contemporary*.

But still the original complication remains. The Latin use of *co-*, and the English, though in the main different, may, in certain cases, coincide. Now the question of the words in question is that

they do coincide. Element for element, *temporary* (treated as English) gives us exactly what *temporarius* would give us as a Latin word Anglicised; whilst, in point of import, *co-English*, gives us just what would be given by *co-* in the Latin *co-etaneus*. The word is difficult; and it is submitted that, with this coincidence, it is no wonder that it should be so.

All that has hitherto been written applies to the element *con-*, as if it were in the recognition or non-recognition of the *n*, that the gist of the question lay. It is probable, however, that this is merely the gnat which is strained at; and the latter element, to which few objections have been made, is the camel which is swallowed. In the opinion of the editor, to talk of *two co(n)temporary preachers* is much the same as to talk of *two extemporary sermons*; a phrase which few critics would defend, though many of the uncritical use it. Sooner or later, however, it will find its way into the language. *Extempore*, to those who know Latin, is an adverb rather than an adjective; yet to *preach a sermon extempore* is pretty sure to come out in the slightly modified form of *preach an extempore sermon*. And hence may come the substantive, a preacher being said to *give an extempore*, just as an organist is said to *give a voluntary*.

In writing, however, there is this difficulty. The final *e*, by those who do not know its import, runs the risk of being treated as a mute, and some such word as *extempore* being the result; to avoid which recourse is had to *y*. For *extempore* to be sure of being sounded as a quadrisyllable, *extempory* is the only orthography. But this is repugnant to the scholar and critic; and he demurs; the effect being that the character of the word remains unfixed, and its form varies accordingly. In *extempore* this is giving us such a barbarism as *extemporary*; in *co(n)temporary* we have got it as a gift from our predecessors. If this be the correct view, the real elements of the compound are *con + tempore*, the word belonging to the same class as *ex-tempore* and *pro-tempore*.]

of money, 'now he May purchase the field he was
wishing for,' we mean that it is in his Power; it
is plain that he May, in the same sense, hoard up
the money, or spend it on something else; though
perhaps we are convinced, from our knowledge of
his character and situation, that he will not. When
again we say, 'it may rain to-morrow,' or 'the ves-
sel may have arrived in port,' the expression does
not at all relate to power, but merely to *contingency*;
i. e. we mean, that though we are not sure such an
event will happen or has happened, we are not sure
of the reverse.—*Whately, Logic*, app. i. *Ambiguous Terms*.

200,000 men were in arms. A new order was insti-

The former have received the designation of *explosive*, and the latter of *continuous*.—*Dr. Carpenter, Principles of human Physiology*, § 941.

Contra. [Latin.] Against; opposite: (element in composition).

Like *con-*, this word has a notable list of compounds; though, comparatively, a short one.

Like *con-*, too, it must be treated as an element which is English as well as Latin; that is to say, it can, like *co-*, be placed before words with which there is no evidence of its union in Latin.

As an *English* element, however, it retains its form. In French its form is *contre*; but this it soon loses in English; sometimes in a manner which entirely disguises its origin. This is the case in *country-dance*, of which the real first element is *contre*, giving a dance in which the partners stand opposite. When it preserves it, as in *contretemps*, the word can scarcely be considered English.

The form, other than that which it has in Latin, is *Counter*; the words which give it being Anglo-Norman, as opposed to Latin on the one side and modern French on the other.

Contra is also the full form of *con* in 'pro and con'; in which case it must be treated as a separate word rather than as the element of a compound.

If there happen to be found an irreverent expression, or a thought too wanton, in the cargo, let them be stayed or forfeited like *contraband* goods.—*Dryden, Fables*, preface.

When two nations are engaged in war, if there be any foreign article or articles necessary for the defence or subsistence of either of them, and without which it would be difficult for it to carry on the contest, the other may legitimately exert every means in its power to prevent its opponent being supplied with such article or articles. All writers of authority on international law admit this principle; and lay it down that a nation which should furnish a belligerent with articles *contraband* of war—that is, with supplies of warlike stores or any article required for the prosecution of the war—would forfeit her neutral character, and that the other belligerent would be warranted in preventing such succours from being sent and confiscating them as lawful prize.—*McCulloch, Commercial Dictionary*.

Contraband. s. Illegal or prohibited traffic.

The Reductio ad Impossible [is that] by which we prove (in the first figure) not, directly, that the original Conclusion is True, but that it Cannot be False; i. e. that an absurdity would follow from the supposition of its being false; e. g.

'All true patriots are friends to religion;
Some great statesmen are not friends to religion;
Some great statesmen are not true patriots;

if this conclusion be not true, its contradictory must be true; viz.

'All great statesmen are true patriots.'

let this then be assumed, in the place of the minor Premiss of the original Syllogism, and a false conclusion will be proved; e. g.

'All true patriots are friends to religion;
All great statesmen are true patriots;
All great statesmen are friends to religion.'

for as this conclusion is the contradictory of the original minor Premiss, it must be false, since the Premises are always supposed to be granted; therefore one of the Premises (by which it has been correctly proved) must be false also; but the major Premiss (being one of those originally granted) is True; therefore the Falsity must be in the minor Premiss; which is the contradictory of the original Conclusion; therefore the original Conclusion must be true. This is the Indirect mode of reasoning.—*Whately, Elements of Logic, b. ii. ch. iii. § 7.*

I endeavour to give the most simple idea of the distemper, and the proper diet, abstracting from the complications of the first, or the contraindications to the second.—*Arbuthnot, On the Nature and Choice of Aliments.*

Contranatural. adj. Opposite to nature; unnatural.

'Tis the perfection of every being to act according to the principle of its own nature; and it is the nature of an arbitrary principle to act or not, to do or undo, upon no account but its own will and pleasure: to be determined and tied up, either by itself, or from abroad, is violent and contranatural.—*Bishop Rust, Discourse of Truth, § 6.*

Contrapose. v. a. [Lat. *contrapositus*.]

Place against; set in opposition. *Rare.*

We may manifestly see contraposed death and life, justice and injustice, condemnation and justification.—*Salkeld, Treatise of Paradise, p. 235: 1617.*

Contraposition. s.

1. Placing over against.

If I have spoken more than needs concerning the opposition, or contraposition, of things in general, I have therefore done it, because I am fully persuaded, &c.—*Ibid, p. 122.*

2. In Logic. Conversion, in particular negative propositions, effected by separating the word *not* from the copula and attaching it to the predicate; without which the

change would, in English and many other languages, be impracticable. Thus

<i>Subject.</i>	<i>Copula.</i>	<i>Predicate.</i>
Some-men	are-not	heroes.

gives, with conversion by contraposition;

<i>Subject.</i>	<i>Copula.</i>	<i>Predicate.</i>
Some-not-heroes	are	men.

K (which indicates the reductio ad impossibile) is a sign that the proposition, denoted by the vowel immediately before it, must be left out, and the contradictory of the conclusion substituted; viz. for the minor premiss in Baroko and the major in Bokardo. But it has been already shown that the conversion by 'contraposition,' [by 'negation'] will enable us to reduce these two moods, ostensibly.—*Whately, Elements of Logic*, b. ii. ch. iii. § 7.

Contrapuntist. *s.* [see Counterpoint.]
One skilled in counterpoint.

Counterpoint is certainly so much an art, that to be, what they call, a learned *contrapuntist*, is with harmonists a title of no small excellence.—*Mason, Essay on Church Music*, p. 209.

Contraregularity. *s.* Contrariety to rule.

It is not only its not promoting, but its opposing, or at least its natural aptness to oppose, the greatest and best of ends; so that it is not so properly an irregularity as a *contraregularity*.—*Norris*.

Contrariant. *adj.* Inconsistent; contradictory. *Rare.*

Such canons, &c., as be not *contrariant* nor repugnant to the laws, statutes, and customs of this realm.—*Acts of Parliament*, 25 Hen. 8. c. 19.

The Christian religion contained precepts far more ungrateful and troublesome to flesh and blood, and *contrariant* to the general inclination of mankind.—*Bishop Pearson, Exposition of the Creed*, art. ii.

Contrariety. *s.*

1. Repugnance; opposition.

It principally failed by late setting out, and by some *contrariety* of weather at sea.—*Sir H. Wotton*.

Their religion had more than negative *contrariety* to virtue.—*Dr. H. More, Decay of Christian Piety*.

There is a *contrariety* between those things that conscience inclines to, and those that entertain the senses.—*South*.

These two interests, it is to be feared, cannot be divided; but they will also prove opposite, and not resting in a bare diversity, quickly rise into a *contrariety*.—*Id.*

There is nothing more common than *contrariety* of opinions; nothing more obvious than that one man wholly disbelieves what another only doubts of, and a third steadfastly believes and firmly adheres to.—*Locke*.

You will have to choose between a comprehension of opinions and a resolution into parties, between latitudinarian and sectarian error: you may be tolerant or intolerant of *contrarieties* of thought, but *contrarieties* you will have.—*Newman, Essay on the Development of Christian Doctrine*, ch. ii. sect. 2.

2. Inconsistency; quality or position destructive of its opposite.

He will be here, and yet he is not here;
How can these *contrarieties* agree?

Shakespeare, Henry VI. Part I. ii. 3.
The will about one and the same thing may, in contrary respects, have contrary inclinations, and that without *contrariety*.—*Hooker*.

Making a *contrariety* the place of my memory, in her foulness I beheld Pamela's fairness, still looking on Mopsa; but thinking on Pamela.—*Sir P. Sidney*.

Contrarily. *adv.*

Sleep, after our short light,

One everlasting night.

Sir W. Raleigh, History of the World.

The political principles of Christianity, if it be right to use such words of a divine polity, are laid down for us in the sermon on the Mount. *Contrariwise* to other empires, Christians conquer by yielding; they gain influence by hating it; they possess the earth by renouncing it.—*Newman, Essay on the Development of Christian Doctrine*, ch. i. sect. 3.

This calculation of M. Babinet may pair-off with that of M. Comte, who, *contrariwise*, made the time of this rotation agree very nearly with the earth's period of revolution round the sun.—*Herbert Spencer, Inductions of Biology*.

To the contrary. To a contrary purpose; to an opposite intent.

They did it not for want of instruction to the *contrary*.—*Bishop Stillingfleet*.

2. In Logic. In the great majority of logical treatises, the meaning of the words *contrary* and *contradictory*, as applied to the relation in which certain propositions stand to one another in the way of Opposition is as follows:—

1. The two Universals, i. e. the Universal Affirmative and the Universal Negative, are *contraries*; as,

Every x is y, opposed to No x is y.

2. The Universal Affirmative and the Particular Negative are *contradictories*; as,

Every x is y, opposed to Some x is not y.

3. The Particular Affirmative and the Universal Negative are *contradictories*; as,

Some x is y, opposed to No x is y.

The same is the case with the Universal Negative and the Particular Affirmative; as,

No x is y, opposed to Some x is y.

This division is both natural and important, as may be seen in the first and second extracts. That a change of name has been proposed may be seen in the third.

Two propositions are said to be Opposed to each other, when, having the same Subject and Predicate, they differ, in Quantity, or Quality, or Both. It is evident, that with any given subject and predicate, you may state four distinct propositions, viz. A, E, I, and O; any two of which are said to be Opposed; hence there are four different kinds of opposition, viz. 1st, the two universals (A and E) are called *contraries* to each other; 2nd, the two particular, (I and O) subalterns; 3rd, A and I, or E and O, subalterns; 4th, A and O, or E and I, *contradictories*. . . . Hence it will be evident, that *contraries* will be both false in Contingent matter, but never both true; subalterns, both true in Contingent matter, but never both false; *contradictories*, always one true and the other false.—*Whately, Elements of Logic*, b. ii. ch. ii. § 3.

It is to be observed, that the most perfect opposition between terms exists between any two which differ only in respectively wanting and having the particle Not (either expressly, or in sense) attached to them; as, 'organized,' and 'not-organized'; 'corporeal,' and 'incorporeal.' For not only is it impossible for both these views to be taken, at once of the same thing, but also, it is impossible but that One or Other should be applicable to every object; as there is nothing that can be Both, so there is nothing that can be Neither. Every thing that can be even conceived, must be either 'Caesar,' or 'not-Caesar'; 'either 'corporeal,' or 'incorporeal.' And in this way a complete twofold division may be made of any subject, being certain (as the expression is) to Exhaust it. And the repetition of this process, so as to carry on a subdivision as far as there is occasion, is thence called by Logicians 'abscissio infiniti'; i. e. the repeated cutting off of that which the object to be examined is Not; e. g. '1. This disorder either is, or is not, dropsy; and for whichever of that reason, it is Not; 2. Any other disease either is, or is not, gout; this is not; then, 3. It either is, or is not, consumption, &c.' This procedure is very common in Aristotle's works. Such terms may be said to be in *contradictory* opposition to each other. On the other hand, *contrary* terms, i. e. those which, coming under some one class, are the most different of all that belong to that class, as 'wise' and 'foolish' both denoting mental habits, are opposed, but in a different manner; for though Both cannot be applied to the same object, there may be other objects to which Neither can be applied; nothing can be at once both 'wise' and 'foolish'; but a stone cannot be either.—*Id.* supplement to ch. i. (in b. ii.) § 2.

The words All and None are signs of Total quantity, and make the propositions Universal, as, 'All Xs are Ys,' 'No Xs are Ys.' The *contrary* (usually called *contradictory*) propositions of the last are 'Some Xs are not Ys,' and 'Some Xs are Ys.' The *contrary* (usually called *contradictory*) forces of the pairs are seen in 'Either all Xs are Ys, or some Xs are not Ys; not both,' and in 'Either no Xs are Ys, or some Xs are Ys; not both.' *Contrary* propositions are a pair of which one must be true and one false; as, 'he did,' 'he did not,' or as, 'Every X is Y,' 'Some Xs are not Ys.' *Contraries* contradict one another; but so do other propositions. Thus 'All men are strong,' and 'All men are weak' contradict one another to the utmost: the second says there is not a particle of truth in the first. But this *contrary* merely says there is more or less falsehood: to 'All men are strong' the *contrary* is 'There are [man or] men who are not strong.' (In the usual nomenclature of logicians, what I call the *contrary* is called The *contradictory*, as if it were the only one. In common language, when two persons disagree, we say they are on *contrary* sides of the question: in the usual technical language of logic, this would mean that if one should say all men are strong the other says no man is strong. But in common language, the one who maintains the *contrary* is he who advocates anything which the other is opposed to.) Every proposition has its *contrary*: there is no assertion but has its denial; no denial but has its assertion. Every logical scheme of propositions must contain a denial for every assertion, and an assertion for every denial.—*De Morgan, Sylabus of a proposed System of Logic*, §§ 13, 14, 139, 140.

Contrary. *v. a.* Oppose; thwart; contradict. *Obsolete.*

CONTRAST CONTRIVANCE

Contrast. s. [Fr. *contraste*.] Opposition and dissimilitude of objects, by which one contributes to the visibility or effect of another.

Longinus says, that Cecilius wrote of the Sublime in a low way; on the contrary, Mr. Pope calls Longinus 'the great sublime he draws.' Let it be my ambition to imitate Longinus in style and sentiment; and, like Cecilius, to make these appear a contrast to my subject; to write of deformity with beauty; and by a finished piece to atone for an ill-turned person.—*Hay, Essay on Deformity*, p. 3.

Those umbrageous pines,
That frown in front, and give each azure hill
The charm of contrast. *Mason, English Garden*.

The figures of the groups must not be all on a side, that is, with their face and bodies all turned the same way; but must contrast each other by their several positions.—*Dryden*.

We should consider in each case what question it is that is proposed, and what answer to it would, in the instance before us, be the most opposite or contrasted to the one to be examined: e.g. 'You will find this doctrine in Bacon,' may be contrasted, either with, 'You will find in Bacon a different doctrine,' or with, 'You will find this doctrine in a different author.'—*Whately, Elements of Logic*, b. ii. ch. iv. § 1.

Also in the appendix to that history, published in the third edition, I have given Aristotle's account of the rainbow, as a further example of his industrious accumulation of facts, and of his liability to error in his facts.—*Whewell, Philosophy of Discovery*.

With respect to what are commonly called Rhetorical Artifices—*contrivances*, for 'making the worse appear the better reason,'—it would have savoured of pedantic morality to give solemn admonitions against employing them, or to enter a formal disclaimer of dishonest intention. . . . The adulterators of food or of drugs, and the coiners of base money, keep their processes a secret, and dread no one so much as him who detects, describes, and proclaims their *contrivances*, and thus puts men on their guard; for 'every one that doeth evil hateth the light, neither cometh to the light, lest his deeds should be made manifest.' To the prevailing association of the term 'Rhetoric,' with the idea of these delusive *contrivances*, may be traced the opinion (which I believe is also common) that the power of eloquence is lost on those who themselves possess it.—*Whately, Elements of Rhetoric*, prof.

The *convention* of the French Revolution, and the *convention* of the present year respecting the evacuation of Rome by the French, give us widely different, perhaps extreme, instances of its meaning. As a general rule, however, it means not only an *agreement* or *compact*, but one which is, also, more or less temporary and preliminary to something permanent and final; hence something which partakes of the nature of a *compromise*.

Conventional. adj.

1. Stipulated; covenanted.

Conventional services reserved by tenures upon grants, made out of the crown or knights service.—*Sir M. Hale, History of the Common Law of England.*

2. Generally accepted or agreed on. (In

this sense the word has a wide range, applying to anything which from universal adoption is resorted to as a matter of course; and which, being so resorted to, puts originality out of the question. The ordinary salutations, and other points of social behaviour, are conventional. They follow certain established precedents. The same applies to the fine arts, where certain generally accepted models or traditions are taken without criticism.)

Of all Christian painting during this long period, from the extinction of Paganism to the rise of Italian art (its first dawn at the beginning of the twelfth century, brightening gradually to the time of Nicholas V.), the one characteristic is that its object was worship, not art. It was a mute preaching, which addressed not the refined and intelligent, but the vulgar of all ranks. Its utmost aim was to awaken religious emotion, to suggest religious thought. It was therefore—more, no doubt, in the East than in the West—rigidly traditional, *conventional*, hierarchical. Each form had its special type, from which it was dangerous, at length forbidden, to depart. Each scene, with its grouping and arrangement, was consecrated by long reverence; the artist worked in the trammels of usage; he had faithfully to transmit to others that which he had received, and no more. Invention was proscribed; novelty might incur the suspicion almost of heresy—at all events it would be an unintelligible language. Symbolism without a key; it would either jar on sacred associations, or perplex, or offend.—*Milman, History of Latin Christianity, b. xiv. ch. 10.*

Conventionalism. s. Conventional character; system of conventional rules and precedents.

But throughout this period faithful conservation was in truth the most valuable service. Mosaic fell in with the tendency to *conventionalism*, and aided in strengthening *conventionalism* into irresistible law.—*Milman, History of Latin Christianity, b. xiv. ch. x.*

The Monkish painters were masters of that invaluable treasure, time, to work their study up to perfection; there was nothing that urged to careless haste. . . . They worshipped their own works, not because they were their own, but because they spoke the language of their souls. They worshipped while they worked, worked that they might worship; and works so conceived and so executed (directly the fetters of *conventionalism* were burst and cast aside, and the technical skill acquired) could not fail to inspire the adoration of all kindred and congenial minds. Their pictures, in truth, were their religious offerings, made in single-minded zeal, with untiring toil, with patience never wearied or satisfied.—*Ibid.*

Thomson, Seasons, Autumn.

Convergence. s. Movement by which two objects converge; direction of any converging objects: (common in *Optics* and *Physiology*).

How much our right estimation of the relative distance of objects not too far removed from the eye depends upon the joint use of both eyes, is made evident by the fact that, if we close one eye, we find ourselves unable to execute with certainty many actions (such as threading a needle or snuffing a candle) which require its guidance; and we can hardly conceive of any other basis for this appreciation, than that which is afforded by the muscular sensations produced by the different degrees in which the optic axes are made to *converge* according to the distances of the object to which we direct our eyes. For, in proportion as they are moved farther and farther, do the optic axes approach parallelism, and the power of appreciating differences of distance is lost; whilst, on the other hand, in proportion as the object is approximated to the eyes, slight differences of distance produce marked differences in the degree of *convergence*. . . . The large extent to which our notion of the relative distances of near objects is due to the variations in the angle of *convergence* of the optic axes is further shown by the following experiment.—*Dr. Carpenter, Principles of human Physiology, § 889.*

Convergent. adj. Same as *Converging*.

One man . . . Brunellesche, had crowned the beautiful city [Florence] with the vast dome of its cathedral. It seemed, amidst the clustering towers of inferior churches, an emblem of the catholic hierarchy under its supreme head; like Rome itself, imposing, unbroken, unchangeable, radiating in equal expansion to every part of the earth and directing its *convergent* curves to heaven.—*Hallam, Introduction to the Literature of Europe in the Fifteenth, Sixteenth, and Seventeenth Centuries, p. i. ch. iii. § 59.*

Converging. part. adj. Having a movement or direction towards the same point. See *Convergence*.

Two methods of adaptation suggest themselves to the optician. Either he may vary the distance between the refractory surface and the screen on which the image is formed, in such a manner that the latter shall always be then the focus of the *converging* rays; or the distance of the screen remaining the same, he may vary the convexity of his lens, in such a manner as to adapt it to the distance of the object.—*Dr. Carpenter, Principles of human Physiology, § 877.*

The *conversing* fibres of the iris are easily made out, as the membrane is principally composed of them.—*Ibid.* § 82.

Conversable or **Conversible**. *adj.* Qualified for conversation; fit for company; well adapted to the reciprocal communication of thoughts; communicative.

Indifference cannot but be criminal, when it is *conversant* about objects which are so far from being of an indifferent nature, that they are of the highest importance to ourselves and our country.—*Id., Freeholder*.

It is said that there was an Amsterdam merchant, who had dealt largely in corn all his life, who had never seen a field of wheat growing; this man had doubtless acquired, by experience, an accurate judgment of the qualities of each description of corn,—of the best methods of storing it,—of the arts of buying and selling it at proper times, &c.; but he would have been greatly at a loss in its cultivation; though he had been in a certain way, long *conversant* about corn.—*Whately, Elements of Rhetoric*, pt. ii.

In introducing the mention of language previously to the definition of logic, I have departed from established practice, in order that it may be clearly understood, that logic is entirely *conversant* about language. If any process of reasoning can take place in the mind, without any employment of language, orally or mentally, (a metaphysical question which I shall not here discuss,) such a process does not come within the province of the science here treated of.—*Id., Elements of Logic*, b. ii. ch. i. § 2.

Conversación. *s.* [Lat. *conversatio*, -onis; from *conversor* = associate.]

By many windings to their clever clinch;

And secondly, must let slip no occasion

The diversions of a Florentine Lent are . . . in the evening, what is called a *conversazione*, a sort of assembly at the principal people's houses, full of I cannot tell what.—*Gray, Letter to his Mother*, 1740.

These *conversazioni* [at Florence] resemble our card-assemblies—some played at cards, some passed the time in conversation, others walked from place to place.—*A. Drummond, Travels through Germany, Italy, and Greece*, p. 41: 1754.

We shall have no more dinners from the dinner-giving Snobs; no more balls from the ball-givers; no more *conversazioni* . . . from the *conversazione* Snob; and what is to prevent us from telling the truth? The snobbishness of *conversazione* Snobs is very soon disposed of, as soon as that cup of washy bohea that is handed to you in the tea-rouff, or the muddy remnant of that ice that you grasp in the suffocating scuffle of the assembly upstairs.—*Thackeray, Book of Snobs*, ch. xviii.

Converse. *v. n.* [Fr. *converser*; Lat. *conversor*.] (with *with*.)

By such a free converse with persons of different sects, we shall find that there are persons of good sense and virtue, persons of piety and worth.—*Watts, Improvement of the Mind*.

3. In *Geometry*. See *extract*.

A proposition is said to be the converse of another, when, after drawing a conclusion from something first proposed, we proceed to suppose what had been before concluded, and to draw from it what had been supposed. Thus, if two sides of a triangle be equal, the angles opposite to those sides are also equal: the converse of the proposition is, that if two angles of a triangle be equal, the sides opposite to those angles are also equal.—*Chambers*.

4. In *Logic*. Transposition of the terms of a proposition.

In reducing a syllogism, we are not, of course, allowed to introduce any new term or proposition, having nothing granted but the truth of the premises; but these premises are allowed to be illatively converted (because the truth of any proposition implies that of its illative converse) or transposed; by taking advantage of this liberty, where there is need, we deduce (in figure 1st) from the premises originally given, either the very same conclusion as the original one, or another from which the original conclusion follows by illative conversion:

All wits are dreaded;

All wits are admired;

Some who are admired are dreaded;

is reduced into Darii, by converting 'by limitation the minor premiss.

2. In Logic. Process by which the converse of a proposition is obtained.

A proposition is said to be converted when its terms are transposed; i.e. when the subject is made the predicate, and the predicate the subject. When nothing more is done, this is called simple conversion. He once intended to have made a better reparation for the folly or injustice with which he might be charged, by writing another poem called 'The Progress of a Freethinker,' wherein he intended to lead through all the stages of vice and folly, to convert him from virtue to wickedness, and from religion to infidelity, by all the modish sophistry used for that purpose.—*Johnson, Life of Savage*. (Ord MS.)

Many that call themselves Protestants, look upon our worship to be idolatrous as well as that of the Papists, and put prelacy and popery together as terms convertible.—*Swift*.

3. Capable of being logically converted.

Thus, if I say of one number—suppose 100—that it is the square of another, as 10, then, this is understood by every one, from his knowledge of the nature of numbers, to imply, what are, in reality, the two propositions, that 100 is 'the square of 10,' and also that 'the square of 10 is 100.' So also, if I say that 'Romulus was the first king of Rome,' this implies, from the peculiar signification of the words, that 'the first king of Rome was Romulus.' Terms thus related to each other are called in technical language, convertible (or 'equivalent') terms. But then, you are to observe that when you not only affirm one term of another, but also affirm (or imply) that these are 'convertible' terms, you are making not merely one assertion, but two.—*Whately, Elements of Logic*, b. i. § 5.

Convex. adj. [Lat. *convexus*. In the opinion of the editor, founded as much upon his observation as to the way in which the word is actually sounded, as upon any theoretical doctrine as to the propriety of any particular pronunciation, this is one of the compounds to which the remarks upon the difference between the English and the Latin *con*-, in respect to accent, are, with a modification, applicable.

It is submitted that the accent, in the words under notice, is nearly the same on each syllable, i.e. that it gives *con-vex*, rather than either *convex* or *convêx*, though each of these may be heard. The same applies to *concave*, which is held to be *con-cave* rather than *convex* or *convêx*. This is because the words are to be treated as opposites, or contrasts to each

other, a fact which, as the initial syllable is the same in each, throws the distinctive emphasis upon the second.

Meanwhile, each appears as a different part of speech, there being, over and above the ordinary adjectival forms, both a verb and substantive *concave*, and (if not the actual verb) the verbal forms *convexed* and *convexedly*. Now, as in ordinary words, the function of the accent is to distinguish combinations of syllables otherwise identical when constituting different Parts of Speech, a conflict between two rules is exhibited in the pair of adjectives under notice.] Rising in a circular form; (opposed to *concave*).

It is the duty of a painter, even in this also, to imitate the *convex* mirror, and to place nothing which glares at the border of his picture.—*Dryden, Translation of Dufresnoy's Art of Painting*.

A very moderate degree of attention, however, to what is passing in the mind, will enable any one to perceive the difference. A blind man may be fully convinced that a soldier's coat is of a different colour from a coal: and this his conviction is not more distinct from a perception of the colours, than a belief that some one is very much to be pitied, from a feeling of pity for him.—*Whately, Elements of Rhetoric*, pt. ii. ch. i. § 2.

[*Convey* — *Convoy*. — The tendency to a thin or a broad

Coolers are of two sorts; first, those which produce an immediate sense of cold, which are such as have their parts in less motion than those of the organs of feeling; and secondly, such as, by particular viscosity, or grossness of parts, give greater consistence to the animal fluids than they had before, whereby they cannot move so fast, and therefore will have less of that intestine force on which their heat depends. The former are fruits, all acid liquors, and common water; and the latter are such as cucumbers, and all substances producing viscosity.—*Quincy.*

Cöpyhold. *s.* Kind of tenure to constitute which the lands must have been demisable by copy of court-roll from time immemorial. See *extract*.

Other things done in the lord's court, so he registers such tenants as are admitted in the court, to any parcel of land or tenement belonging to the manor; and the transcript of this is called the court roll, the copy of which the tenant takes from him, and keeps as his only evidence. This is called a *base tenure*, because it holds at the will of the lord; yet not simply, but according to the custom of the manor: so that if a copyholder break not the custom of the manor, and thereby forfeit his tenure, he cannot be turned out of the lord's pleasure. These customs of manors vary in one point or other, almost in every manor. Some *copy-holds* are finable, and some certain: that which is finable, the lord rates at what fine or income he pleases, when the tenant is admitted into it: that which is certain is a kind of inheritance, and called in many places customary; because the tenant dying, and the hold being void, the next of blood paying the customary fine, as two shillings for an acre or so, cannot be denied his admission. Some *copy-holders* have, by custom, the wood growing upon their own land, which by law they could not have. Some hold by the verge in ancient demesne; and though they hold by copy, yet are they, in account, a kind of freeholders. For, if such a one commit felony, the king has a *sum, diem, and vastum*, as in case of freehold. Others hold by common tenure, called *merchet*, *hold*; and they committing felony, their land is sold to the lord of the manor.—Cowell.

If a customary tenant die, the widow shall have what the law calls her free bench in all his *copy-hold* lands.—Addison.

All these things came over my mind; all the gratulations that would have thickened upon him, and even some have glanced aside upon his humble friend; the vanity, and the fame, and the profits (the Professor is 500*l.* ideal money out of pocket by this failure, besides 200*l.* he would have got for the *copyright*, and the Professor is never much beforehand with the world).—Lamb, *Letters to Manning*.

Coquet. v. a. Entertain with compliments and amorous tattle; treat with an appearance of amorous tenderness.

Coquette. s. [Fr. *coquette*.] Gay airy girl; woman who endeavours to attract notice.

The light *coquettes* and sylphs alert repair,
And sport and flutter in the fields of air. *Pope*.
A *coquette* and a tinder-box are spark-led.—*Arbutnot and Pope*.

Not less vain of her person than her politicks, this stately *coquet*, the guardian of the protestant faith, the terror of the sea, the mediatrix of the factions of France, and the scourge of Spain, was infinitely mortified, if an ambassador, at the first audience, did not tell her she was the finest woman in Europe.—*T. Warton, History of English Poetry*, iii. 493.

From answering she began to question: this
With her was rare; and Adeline, who as yet
Thought her predictions went not much amiss,
Began to dread she'd thaw to a *coquette*—
Very difficult, they say, it is

To keep extremes from meeting, when once set
in motion. *Byron, Don Juan*, xv. 81.
on *coquart*, a prattler, *Dr. Johnson* says; which may be from *coquet*, to tattle. The old French is *coquet* for *coquart*. V. Lacombe. One might suppose Colgrave to have been jilted by some *coquette*, and that, in revenge, he heaped upon the name the following choice terms: 'Cockle, a prattling or proud gossip; a fishing or dapper minx; a cocket or falling housewife; a titisil; a fobergebit.' Among these appellations we see *cocket*, which was the English word at that time and which is perhaps the meaning of Ben Jonson's 'simpler the cockets' in one of his Masques. Our old adjective *cocket* is pert, brisk, gay, &c., and was also at the beginning of the last century written *coquet*. 'A gentleman, a friend of her's, is always very *coquet* to her in his drink, and never so at other times; because folly is the effect of drunkenness.' (*British Apollo*, 1718, vol. i. p. 703.)—*Todd*.

Coracle. s. [Welsh, *cwrgl*.] Boat formed of a frame of wickerwork covered with leather or oiled cloth.

Herodotus assures us, that the boats on the Euphrates were made of willows covered over with hides, and which appear by his description to be much the same with what are used at this time on the river Severn, and known by the name of *coracles*.—*Costard, Observations tending to illustrate the Book of Job*, exp. 1747, p. 8.

I have been informed, that boats made of wicker, and covered with a skin, resembling the upper shell of a tortoise, are frequently used for passing rivers in different parts of India.—Boats of a similar structure are to be found in Wales, called *coracles*.—*Holt, Remarks on the Arabian Nights' Entertainments*, p. 95.

Coral. s. [Lat. *corallium*.]

1. Animal product forming the hard, or supporting, part of a large class of polypes; by the soft parts of which it is secreted; polypedom: (the extracts indicate the extent to which its animal or vegetable character has been a matter of doubt).

Red coral is a plant of great hardness, and stony nature, while growing in the water, as *l* has after long exposure to the air. The vulgar opinion, that coral is soft, while in the sea, proceeds from a soft and thin coat, of a crustaceous matter, covering it while it is growing, and which is taken off before it is packed up for use. The whole coral plant

grows to a foot or more in height, and is variously ramified. It is thickest at the stem, and its branches grow gradually smaller. It grows to stones, without a root, or without any way penetrating them, but as it is found to grow, and take in its nourishment in the manner of plants, and to produce flowers and seeds, or at least a matter analogous to seeds, it properly belongs to the vegetable kingdom.—*Sir J. Hill, Materia Medica*.

This gentleman, desirous to find the nature of coral, caused a man to go down a hundred fathom into the sea, with express orders to take notice whether it were hard or soft in the place where it groweth.—*Sir T. Browne, Vulgar Errors*.

A turret was inclos'd
Within the wall, of alabaster white,
And crimson coral, for the queen of night
Who takes in Sylvan sports her chaste delight.

Dryden.
Coral [is] a calcareous substance formed by a species of sea polypus. . . . The finest coral is found in the Mediterranean. It is fished for on the coasts of Provence, and constitutes a considerable branch of the trade of Marseilles. . . . Coral-fishing is nearly as dangerous as pearl fishing, on account of the number of sharks which frequent the seas where it is carried on. . . . Coral is mostly of a fine red colour, but occasionally it is flesh-coloured, yellow, or white. The red is preferred for making necklaces, crosses, and other female ornaments.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

Used adjectively, or as the first element in a compound.

He hears the crackling sound of coral woods,
And sees the secret source of subterranean floods.

Dryden, Virgil.
From Greenland's icy mountains,
From India's coral strand;
Where Afric's sunny fountains
Roll down their golden sand;
From many an ancient river,
From many a palmy plain;
They call us to deliver
Their land from error's chain.

Bishop Heber, Missionary Hymn.
This resolution was . . . strengthened by intelligence that arrived in June, that an Algerine squadron had attacked a large body of Christians engaged in the coral fishery off Bona, and had massacred or carried off into captivity the whole of the crews.—*Yonge, Naval History of Great Britain*, ii. 419.

The most important productions of the apparently insignificant race of Polypt are the accumulations of the calcareous skeletons of the Anthozoa, which form the coral islands and reefs. . . . These zoophytic productions are classified under three heads: 'atolls,' 'barrier reefs,' and 'fringing reefs.' The term 'atoll' is the name given to the coral-islands, or lagoon-islands, by their inhabitants in the Indian Ocean. An atoll consists of a wall or mound of coral rock, rising in the ocean from a considerable depth, and returning into itself, as to form a ring, with a lagoon, or sheet of still water, in the interior. . . . The coral animals thrive best in the surf occasioned by the breakers. Through this agitation an ever-changing and aerated body of sea-water washes over their surface, and their imperfect respiration is maintained at the highest state of activity. Abundant animalcules, and the like objects of food, are thus constantly brought within the sphere of the tentacula of the hungry polypes. . . . The third class of coral productions, which Mr. Darwin terms 'fringing reefs,' differ from the barrier reefs in having a comparatively small depth of water on the outer side, and a narrower and shallower lagoon channel between them and the main reef. . . . differences in the characters of the wonderful fabrications of the coral animalcules are explicable by the following facts in their physiology. . . . The terms ascending and descending, of course, only here apply to the relation of the coral-builders to the unstable land, not to the level of the unchanging sea. . . . Let the island go on subsiding, and the coral reef will continue growing up on its own foundation, whilst the water gains on the land, until the highest point is covered, and there remains a perfect atoll.—*Owen, Lectures on Comparative Anatomy*, lect. vii.

2. Piece of coral which children have to help them in cutting their teeth.

Her infant grandame's coral next it grew;
The bells she ginged, and the whistle blew. *Pope*.

Coralline. adj. Consisting of coral; having the character or nature of coral.

At such time as the sea is agitated, it takes up into itself terrestrial matter of all kinds, and in particular the *coralline* matter, letting it fall again as it becomes calm.—*Woodward, On Fossils*.

Coralline. s.

1. Polypedom of the corallines.

Coralline is a sea-plant used in medicine; but much inferior to the coral in hardness, sometimes greenish, sometimes yellowish, often reddish, and frequently white.—*Sir J. Hill*.

2. In Zoology. Polype of the same character as coral animal; but of a different structure, and of a different use in commerce.

habiting northern and temperate, rather than tropical, latitudes.

The genera *Sertularia*, *Campanularia*, *Tubularia*, &c., which form the principal subjects of Ellis's beautiful and classical work on *Corallines*, compose the present division of the compound Hydrozoa, or hydriform polypes. . . . It appears that sea-water may have entry to these canals and circulate with the chyle, and so contribute some share to the respiratory process of the *corallines*. It is certain that sea-water is admitted to the corresponding cavities in the Anthozoa. Both Lister and Lowen have observed an alternate imbibition and expulsion of water in the polypes of *Sertularia* and *Tubularia*. The chylaceous fluid, as it may be termed, which circulates in the general ramified cavity of the *coralline* is colourless, and contains only some minute round corpuscles.—*Owen, Lectures on Comparative Anatomy*, lect. vii.

Coralloid. adj. [Gr. *κοραλλοειδης*.] Resembling coral.

The pentadrous, columnar, *coralloid* bodies that are composed of plates set lengthways of the body, and passing from the surface to the axis of it.—*Woodward, On Fossils*.

Coralloidal. adj. Same as Coralloid.

Now that plants and ligneous bodies may indurate under water, without approachment of air, we have experiment in coralline, with many *coralloidal* concretions.—*Sir T. Browne*.

Were a fleur-de-lis or a quatre-feuille.

Sir W. Scott, Lay of the Last Minstrel.
Corbels are used in a great variety of situations, and are carved and moulded in various ways according to the taste of the age in which they are executed; the form of a head was very frequently given them in each of the styles from Norman to late Perpendicular, especially when used under the ends of the weather-mouldings of doors and windows, and in other similar situations. Any construction which is carried by *corbels* so as to stand beyond the face of a wall is said to be *corbelled* out. A *corbel-table* [is] a row of *corbels* supporting a parapet or cornice.—*Glossary of Architecture*.

Whatever increaseth the natural or animal strength, the force of moving the fluids and muscles, is a cordial: these are such substances as bring the serum of the blood into the properest condition for circulation and nutrition; as broths made of animal substances, milk, ripe fruits, and whatever is endued with a wholesome but not pungent taste.—*Arbutnot, On the Nature and Choice of Aliments.*

2. In Architecture. Epithet applied to the fourth order, which is characterized by fluted shafts and foliated capitals, more delicate in form, though less rich in detail, than the Composite. Like Doric and Ionic, it is a proper rather than a common term. Partly from the elegance of the columns, and partly from the manners of the city, the word has several secondary senses more or less akin to the preceding; e.g. 'Corinthian capital,' applied to the higher orders, as forming the crowning part in the structure of society.

(For example see extract under Doric.)

Corinthian, s. In allusion to the notorious licentiousness of Corinth, 'to play the Corinthian' was an expression denoting the conduct of a profligate; and in the same sense has passed into our vulgar language. In the third decad of the present century the word, both as a substantive and an adjective, was at the height of its popularity as a slang term.

I am no proud Jack, like Falstaff; but a Corinthian; a lad of mettle.—*Shakespeare, King Henry IV. Part I. ii. 4.*

Cork, s. [see last extract.] Bark so called.

a. In its natural state.

Cork [is] the bark of the Quercus liber, a species of oak-tree which grows abundantly in the southern provinces of France, Italy, and Spain. The bark is taken off by making coronal incisions above and below the portions to be removed; vertical incisions are then made from one of these circles to another, whereby the bark may be easily detached. It is steeped in water to soften it, in order to be flattened by pressure under heavy stones, and next dried at a fire which blackens its surface. The cakes are bound up in bales and sent into the market.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

b. Cut into shape as a stopper for a bottle.

Used adjectivally, or as the first element in a compound.

[*Cork.* Spanish, *corcho*, from Latin, *cortex*; as Spanish, *pancho*, paunch, from *paniter*. It is possible however that the word may be connected with Latin, *cortex*, and yet not be derived from a Latin source. The root *cor* is widely spread in the Slavonic and Finnish class of languages in the sense of mind,

skin, shell, uniting the Latin *corium*, skin, with *cortex*, bark. Applied to wine, as in 'This wine, sample, or bottle, is *corked*,' it is doubtful whether *cork*, in its ordinary sense, has much to do with the meaning; which is *foul* in general, rather than *tainted by the cork* in particular. Corkwing. s. Fish (*Labrus cornubicus*) akin to the Corkling.

The *Corkwing*, which has been called *Cornubius*, *Cornubicus*, and *Cornubiensis*, as though supposed originally, as its name would seem to imply, to be exclusively Cornish, is not confined to the western part of England. Misled by the British Zoology . . . where Pennant has given the figure and the enumeration of the fin-rays of the fish, the *Corkwing*, under the name, and with part of the description of the Goldsinny of Jago, I have, in the former edition of this work, called the fish by mistake the Goldsinny.
